This three-volume set of *Pharmaceutical Dosage Forms: Parenteral Medications* is an authoritative, comprehensive reference work on the formulation and manufacture of parenteral dosage forms, effectively balancing theoretical considerations with the practical aspects of their development. As such, it is recommended for scientists and engineers in the pharmaceutical industry and academia, and will also serve as an excellent reference and training tool for regulatory scientists and quality assurance professionals. First published in 1984 (as two volumes) and then last revised in 1993 (when it grew to three volumes), this latest revision will address the plethora of changes in the science and considerable advances in the technology associated with these products and routes of administration. The third edition of this book maintains the features that made the last edition so popular but comprises several brand new chapters, revisions to all other chapters, as well as high quality illustrations. Volume two presents:

- Chapters on aseptic facility design, environmental monitoring, and cleanroom operations.
- A comprehensive chapter on pharmaceutical water systems.
- A discussion of quality attributes of sterile dosage forms, including particulate matter, endotoxin, and sterility testing.
- A detailed chapter on processing of parenteral drug products (SVPs and LVPs).
- Presentations on widely used sterilization technologies – steam, gas / chemical, radiation, filtration and dry heat.
- An in-depth chapter on lyophilization.

Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e., dual tasking) or executing multiple tasks in varying sequences (i.e., task switching). In the literature, numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or

sequentially active component of task-sets in these situations. However, these approaches have been rather vague regarding explanatory concepts (e.g., task-set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/ or empirical evidence for specific subcomponents. The present research topic aims at providing a selection of contributions on the details of executive functioning in dual-task and task switching situations. The contributions specify these executive functions by focusing on (1) fractionating assumed mechanisms into constituent subcomponents, (2) their variations by age or in clinical subpopulations, and/ or (3) their plasticity as a response to practice and training.

The first edition introduced the newly emerging field called Positive Organizational Scholarship. Rather than focusing on organizational dysfunction, Positive Organizational Scholarship looks at organizations that are functioning at an unusually high level. Learning from such successful groups about what they did right forms the backbone of the strategy, because strategies that capitalize on the positive tend to produce life-giving, flourishing outcomes in organizations. The four strategies discussed in the first edition included the cultivation of positive climate, positive relationships, positive communication, and positive meaning. Each strategy is explained and illustrated. In this revised edition, the author will add the following materials: Chapter 1: Outlining three outcomes associated with positive leadership and one more example. Chapter 2: Adding some empirical findings linking attributes of climate with physiological benefits. Chapter 3: A brief discussion of temporary encounters with positive or negative outcomes. Chapter 4: Additional research on the results of the positive-to-negative-communication-ratio. Chapter 5: Elaboration on the issue of meaningfulness in work. Chapter 6: More ideas for implementation

Applied Sport Management Skills, Second Edition With Web Study Guide, uses the four management functions of planning, organizing, leading, and controlling to teach readers how to become strong leaders and managers in the world of sport. *Becoming the Person Others Will Want to Follow* OECD Publishing From two of the world's leading authorities on dogs, an imaginative journey into a future of dogs without people What would happen to dogs if humans simply disappeared? Would dogs be able to survive on their own without us? *A Dog's World* imagines a posthuman future for dogs, revealing how dogs would survive—and possibly even thrive—and explaining how this new and revolutionary perspective can guide how we interact with dogs now. Drawing on biology, ecology, and the latest findings on the lives and behavior of dogs and their wild relatives, Jessica Pierce and Marc Bekoff—two of today's most innovative thinkers about dogs—explore who dogs might become without direct human intervention into breeding, arranged playdates at the dog park, regular feedings, and veterinary care. Pierce and Bekoff show how dogs are quick learners who are highly adaptable and opportunistic, and they offer compelling evidence that dogs

already do survive on their own—and could do so in a world without us. Challenging the notion that dogs would be helpless without their human counterparts, *A Dog's World* enables us to understand these independent and remarkably intelligent animals on their own terms.

For hundreds of years, different leadership theories have been explored to try to explain exactly how and why certain people become great leaders. Research spans a discussion of personality traits, the characteristics of the situation at hand, and qualifications of the leader to try to determine what causes people to become more likely than others to take charge. This can be in various settings: CEOs, presidents and prime ministers, managing directors, governors, senators, head coaches, and more. Through the examination of first-time leadership, new theories and ideas on leadership are explored. *The Handbook of Research on Innate Leadership Characteristics and Examinations of Successful First-Time Leaders* is a comprehensive reference source that focuses on what qualities distinguish first-time leadership from traditional leaders, while furthering leadership theories that look at other variables such as situational factors, knowledge base, skill levels, etc. It reviews the various approaches used by first-time leadership and how each of them uniquely approaches effective leadership, key outcomes, and the strengths and weaknesses of each approach. Furthermore, it distinguishes between the traditional route for leadership, the gradual moving up of an individual over time to higher positions, and a first-time leadership in which an individual begins right away in a position without climbing the professional ladder. This book will attempt to draw lessons from existing first-time leadership experience and provide evidence for the appropriateness of such a route to leadership. Topics highlighted include transformational leadership, political leaders, ethical and unethical leadership, and leadership development. This book is ideal for young professionals, leaders, executives, managers, graduate students, practitioners, government officials, researchers, academicians, and students.

SHELVING GUIDE: Project Management This hands-on guide is written for project professionals seeking to find an optimized way of performing project management. It provides answers to such

critical questions as: Why should an organization apply project management? What is the value of project management in the broader context of an organization? Is project management as successful as some advocates suggested or is it a waste of time and resources because of the many extensive and bureaucratic processes? Which project management approach should our project team adopt: predictive or adaptive, waterfall or rolling water, extreme programming or Scrum? This book aims to provide an optimized view of project management by balancing and blending competing methodologies (e.g., traditional versus Agile), lengthy methodologies and broad principles, processes and practices, and the need to understand versus the need to apply. It includes project management templates, an integrated case study illustrating how to apply tools and concepts, and a glossary of key terms. *Optimizing Project Management* is for both aspiring and practicing project management professionals. It covers the core concepts, practices, and skills that are useful for developing new ideas, planning activities, implementing projects, and conducting planning and controlling of schedule, budget, and scope. The text is particularly useful for students, project professionals wanting to refresh their knowledge, and those pursuing project management certifications. This book is aligned with common project management standards such as the Project Management Body of Knowledge and the ISO 21502: Project, Programme and Portfolio Management — Guidance on Project Management.

Does gender make a difference to the way the judiciary works and should work? Or is gender-blindness a built-in prerequisite of judicial objectivity? If gender does make a difference, how might this be defined? These are the key questions posed in this collection of essays, by some 30 authors from the following countries; Argentina, Cambodia, Canada, England, France, Germany, India, Israel, Italy, Ivory Coast, Japan, Kenya, the Netherlands, the Philippines, South Africa, Switzerland, Syria and the United States. The contributions draw on various theoretical approaches, including gender, feminist and sociological theories. The book's pressing topicality is underlined by the fact that well into the modern era male opposition to women's admission to, and progress within, the judicial profession has been largely based on the argument that their very gender programmes women to show empathy, partiality and gendered prejudice - in short essential qualities running directly counter to the need for judicial objectivity. It took until the last century for women to begin to break down such seemingly insurmountable barriers. And even now, there are a number of countries where even this first step is still waiting to happen. In all of them, there remains a more or less pronounced glass ceiling to women's judicial careers. *Applied Sport Management Skills, Second Edition (With Web Study Guide)* Routledge

Leadership Skills for Women CRC Press

This monograph analyzes the leadership characteristics that suggest a rapid acceptance of changing conditions in warfare among senior leaders and which leadership characteristics tend to suggest a more conservative approach. This conservative approach fails to recognize and adapt to the new emerging conditions. This research studied two World War I British leaders, General Sir Ivor Maxse and General Sir Hubert Gough, and compared and contrasted their leadership characteristics. From this, the research identified the most significant leadership characteristics that allowed these leaders to successfully adapt

quickly in a time of transition. The criteria for analysis was based on four leadership characteristics as defined in FM 22-100, Army Leadership: Revised Final Draft, dated June 1998. The four leadership characteristics used as evaluation criteria were personal courage, initiative, tactical skill, and learning. A comparison of the role of the two World War I leaders yields the conclusion that certain leadership characteristics allowed them to adapt more easily in an evolving environment and facilitated successful battlefield leadership. These characteristics were moral courage, initiative, tactical skill and the application of knowledge through effective, continual learning. The monograph provides valuable insights into what leadership characteristics will allow current and future leaders to be successful, and unsuccessful, during a military transitional period. Our leaders must be creative, intuitive, dynamic, and able to make contemplated decisions, and have the courage and determination to act on them. The requirement for developing those leaders is an important one for the United States and a demanding one for the U.S. Army. An understanding of these leadership characteristics and the reasons that they facilitate successful battlefield leadership can provide an intellectual foundation beneficial to the Army as it prepares for future warfare.

The book includes relevant medical, psychological, and developmental information to help service providers and parents to understand children with disabilities. In this revised edition, the author has updated or eliminated some of the medical information and added more related music therapy literature. This book can be used as a valuable handbook for clinicians. Also, it may be used as a primary or supplemental textbook in classes to prepare music therapy students to work with children who have disabilities. All music therapy students who complete an undergraduate curriculum should know the characteristics and common needs of the major disabilities discussed in this book. In addition, class work and clinical experiences must include basic techniques and materials used to accomplish the goals and objectives set for each child. This is addressed in a manner that will be useful to all personnel working with children with disabilities. The first two chapters describe the process of assessment and delineation of goals in music therapy, which leads to the design of the music therapy portion of the IEP or care plan. Subsequent evaluation allows progress to be stated

objectively. The remaining chapters describe each population of children to be served, with emphasis on medical and psychological characteristics unique to each population, and specific goals and procedures to be used in music therapy. The CAMEOS model is used in this book to address the child's Communication, Academic, Motor, Emotional, Organizational, and Social needs and ways these may be addressed through music therapy. Whether the child is homebound, included in regular classes, seen in a resource room or special education program, or in hospital care, he/she has needs that can be described within the CAMEOS model. Music therapy may provide service in each of these areas.
