Special Issue:
September - Future
of E-government:
Learning from the
Past. Elsevier

Growth in the pharmaceutical market has slowed down – almost to a standstill. One reason is that governments and other payers are cutting costs in a faltering world economy. But a more fundamental problem is the failure of major companies to discover, develop and market new drugs. Major drugs losing

patent protection or being withdrawn from the market are simply not being replaced by new therapies – the pharmaceutical market model is no longer functioning effectively and most pharmaceutical companies are failing to produce the innovation needed for success. This multi-authored new book looks at a vital strategy which can bring innovation to a market in need of new ideas and new products: Systems Biology (SB). Modeling is a significant task of systems biology. SB aims to develop and

use efficient algorithms, data structures, visualization and communication tools to orchestrate the integration of large quantities of biological data with the goal of computer modeling. It involves the use of computer simulations of biological systems, such as the networks of metabolites comprise signal transduction pathways and gene regulatory networks to both analyze and visualize the complex connections of these cellular processes. SB involves a series of operational protocols used for performing research, namely a cycle composed of theoretical, analytic or computational modeling to propose specific testable

hypotheses about a biological system, experimental validation, and then using the newly acquired quantitative description of cells or cell processes to refine the computational model or theory.

Prof. G.N.

Ramachandran Has Been Among The Foremost Biophysicists And Structural Biologists Of Our Times, And The Most Outstanding Scientist To Have Worked In Independent India. His Contributions Pertaining To Collagen, Methods Of Structural Analysis, Computer Modelling And Conformational

Analysis, And Three-Dimensional Image Reconstruction Have Had A High Global Impact. This Volume In Honour Of Gnr Consists Of Articles At The Cutting Edge Of Structural Biology Contributed By Leading Scientists, Including Two Noble Laureates. It Is Intended To Be A Window To Modern Structural Biology And A Showcase Of The Indian Effort In This Area.

SOCRATES WIT Press

This book constitutes the proceedings of the 14th International Conference on Applied Reconfigurable Computing, ARC 2018, held in Santorini, Greece, in May 2018. The 29 full papers and 22 short presented in this volume were carefully reviewed and selected from 78

submissions. In addition, the volume contains 9 contributions from research projects. The papers were organized in topical sections named: machine learning and neural networks; FPGA-based design and CGRA optimizations; applications and surveys; fault-tolerance, security and communication architectures; reconfigurable and adaptive architectures; design methods and fast prototyping; FPGA-based design and applications; and special session: research projects. *14th International Symposium, ARC 2018, Santorini, Greece, May 2-4, 2018, Proceedings* Springer

During recent decades we have witnessed not

only the introduction of automation into the work environment but we have also seen a dramatic change in how automation has influenced the conditions of work. While some 30 years ago the addition of a computer was considered only for routine and boring tasks in support of humans, the balance has dramatically shifted to the computer being able to perform almost any task the human is willing to delegate. The very fast pace of change in processor and information technology has been the main driving force behind this development. Advances in automation and especially Artificial Intelligence (AI) have enabled the formation

of a rather unique team with human and electronic members. The team is still supervised by the human with the machine as a subordinate associate or assistant, sharing responsibility, authority and autonomy over many tasks. The requirement for teaming human and machine in a highly dynamic and unpredictable task environment has led to impressive achievements in many supporting technologies. These include methods for system analysis, design and engineering and in particular for information processing, for cognitive and complex knowledge [1] engineering .
7th International Conference, KES 2003

Oxford, UK, September 3-5, 2003 Proceedings, Part II Springer

This book constitutes the refereed proceedings of the 19th International Symposium on Methodologies for Intelligent Systems, ISMIS 2011, held in Warsaw, Poland, in June 2011. The 71 revised papers presented together with 3 invited papers were carefully reviewed and selected from 131 submissions. The papers are organized in topical sections on rough sets - in memoriam Zdzisław Pawlik, challenges in knowledge discovery and data mining - in memoriam Jan Żytkov, social networks, multi-agent systems, theoretical backgrounds of AI,

machine learning, data mining, mining in databases and warehouses, text mining, theoretical issues and applications of intelligent web, application of intelligent systems in sound processing, intelligent applications in biology and medicine, fuzzy sets theory and applications, intelligent systems, tools and applications, and contest on music information retrieval.

Synthetics, Mineral Oils, and Bio-Based Lubricants Scientific Publishers

These two volumes, LNCS 7076 and LNCS 7077, constitute the refereed proceedings of the Second International Conference on Swarm, Evolutionary, and Memetic Computing,

SEMCCO 2011, held in Visakhapatnam, India, in December 2011. The 124 revised full papers presented in both volumes were carefully reviewed and selected from 422 submissions. The papers explore new application areas, feature new bio-inspired algorithms for solving specific hard optimization problems, and review the latest progresses in the cutting-edge research with swarm, evolutionary, and memetic computing in both theoretical and practical aspects.

Text Book of Bioinformatics Springer Science & Business Media

This book constitutes the thoroughly refereed post-conference proceedings of the 5th International ICST

Conference on Bio-Inspired Models of Network, Information, and Computing Systems (BIONETICS 2010) which was held in Boston, USA, in December 2010. The 78 revised full papers were carefully reviewed and selected from numerous submissions for inclusion in the proceedings. BIONETICS 2010 aimed to provide the understanding of the fundamental principles and design strategies in biological systems and leverage those understandings to build bio-inspired systems.

Multi-disciplinary Trends in Artificial Intelligence IGI Global
In the post-genomic era, a holistic understanding of biological systems and

processes, in all their complexity, is critical in comprehending nature's choreography of life. As a result, bioinformatics involving its two main disciplines, namely, the life sciences and the computational sciences, is fast becoming a very promising multidisciplinary research field. With the ever-increasing application of large-scale high-throughput technologies, such as gene or protein microarrays and mass spectrometry methods, the enormous body of information is growing rapidly. Bioinformaticians are posed with a large number of difficult problems to solve, arising not only due to the complexities in

acquiring the molecular information but also due to the size and nature of the generated data sets and/or the limitations of the algorithms required for analyzing these data. Although the field of bioinformatics is still in its embryonic stage, the recent advancements in computational and information-theoretic techniques are enabling us to conduct various *in silico* tests and screening of many lab-based experiments before these are actually performed *in vitro* or *in vivo*. These *in silico* investigations are providing new insights for interpretation and establishing a new direction for a deeper understanding. Among the various advanced

computational methods currently being applied to such studies, the pattern recognition techniques are mostly found to be at the core of the whole discovery process for apprehending the underlying biological knowledge. Thus, we can safely surmise that the - going bioinformatics revolution may, in future, inevitably play a major role in many aspects of medical practice and/or the discipline of life sciences.

Indian Journal of Experimental Biology
Springer Science & Business Media

The viewpoint is that communication networking is about efficient resource sharing. The focus is on the three building

blocks of communication networking, namely, multiplexing, switching and routing. The approach is analytical, with the discussion being driven by mathematical analyses of and solutions to specific engineering problems. The result? A comprehensive, effectively organized treatment of core engineering issues in communication networking. Written for both the networking professional and for the classroom, this book covers fundamental concepts in detail and places design issues in context by drawing on real world examples from current technologies. Systematically uses mathematical models and analyses to drive

the development of a practical understanding of core network engineering problems. Provides in-depth coverage of many current topics, including network calculus with deterministically-constrained traffic, congestion control for elastic traffic, packet switch queuing, switching architectures, virtual path routing, and routing for quality of service. Includes over 200 hands-on exercises and class-tested problems, dozens of schematic figures, a review of key mathematical concepts, and a glossary.

The Development of Its
Laws and Constitution

Springer Science &
Business Media

This book will provide

assistance to the broad range of readers involved in the crude oil import and production; renewable energy production; biomass analysis and bioconversion; greenhouse gas emissions; techno-economic analysis and government policies for implementing biofuels in India. This book presents important aspects on the large scale production of biofuels following a bio-refinery concept and its commercialization and sustainability issues. Hence, it is a useful resource to policy makers, policy analysts, techno-economic analysts and business managers who deal with commercialization and implementation of bio-based energy and

other value-added products. The following features of this book attribute its distinctiveness: As a first uniquely focused scientific and technical literature on bioenergy production in the context of India. To its coverage of technological updates on biomass collection, storage and use, biomass processing, microbial fermentation, catalysis, regeneration, solar energy and monitoring of renewable energy and recovery process. To the technical, policy analysis, climate change, geo-political analysis of bioenergy and green transportation fuels at industrial scale.

Third IAPR International Conference, PRIB 2008, Melbourne,

Australia, October 15-17, 2008.

Proceedings Saurabh Chandra, Socrates Scholarly Research Journal

This book constitutes the refereed proceedings of the Second International Conference on Distributed Computing and Internet Technology, ICDCIT 2005, held in Bhubaneswar, India in December 2005. The 40 revised full papers and 19 revised short papers presented together with 2 invited plenary talks were carefully reviewed and selected from 426 submissions. Covering the main areas distributed computing, internet technology, system security, data mining, and software engineering the papers are subdivided in

topical sections on network protocols, routing in mobile ad hoc network, communication and coverage in wireless networks, secured communication in distributed systems, query and transaction processing, theory of distributed systems, grid computing, internet search and query, e-commerce, browsing and analysis of Web elements, theory of secured systems, intrusion detection and ad hoc network security, secured systems techniques, software architecture, software optimization and reliability, formal methods, data clustering techniques, and multidimensional data mining.

December 16-18,

2009, Proceedings

Springer

Dragonflies (Odonata),

represented by over

6000 known species,

are unique insects. In

more than one feature

they differ, at the very

first glance, from all

other insect

superorders including

their nearest allies, the

mayflies

(Ephemeropteroidea).

The Zygoptera and

Anisoptera, on the

other hand, are the

dominant groups.

Being voracious

predators in both

immature (aquatic)

and adult (aerial)

stages they are

important elements of

all, except the drier (or

high alpine)

environments in

temperate and tropical

regions, occupying a

position at the apex of

the food chain of invertebrate life. Many dragonfly species are tested biological control agents for several disease-transmitting vector mosquitoes, especially *Aedes* species. They are also ideal organisms to be used as indicators of water pollution and contamination. Many species serve as intermediate hosts of fluke parasites of birds, and thus are important in the transmission of parasitic diseases, especially of domestic poultry and wild ducks. Because of their unique morphology and physiology, dragonflies are used extensively in the study of many biological phenomena. All these subjects are discussed in this unique book

comprising twenty three articles written by expert odonatologists from different parts of the world. The book is written in a lucid and comprehensible language, and will likely be useful to both the professional and amateur alike.

Advances In Pattern Recognition -

Proceedings Of The 6th International Conference

Springer

The two-volume set of LNCS 11941 and 11942 constitutes the refereed proceedings of the 8th International Conference on Pattern Recognition and Machine Intelligence, PReMI 2019, held in Tezpur, India, in December 2019. The 131 revised full papers presented were carefully reviewed and selected from 341

submissions. They are organized in topical sections named: Pattern Recognition; Machine Learning; Deep Learning; Soft and Evolutionary Computing; Image Processing; Medical Image Processing; Bioinformatics and Biomedical Signal Processing; Information Retrieval; Remote Sensing; Signal and Video Processing; and Smart and Intelligent Sensors.

Management of Water, Energy and Bio-resources in the Era of Climate Change: Emerging Issues and Challenges Springer Science & Business Media

This timely book is a compilation of edited articles by distinguished international scientists

discussing global warming, its causes as well as present and future solutions. Social and economic growth at global level is measured in terms of GDP, which requires energy inputs generally based on fossil fuel resources. These, however, are major contributors to increasing levels of CO₂, causing 15 tonnes of green house gas emissions per capita. Renewable sources of energy offer an alternative to fossil fuels, and would help reduce this to the 2 tonnes of greenhouse gas emissions per capita per annum needed to achieve sustainable growth. As such, the book discusses the next-generation of biofuels and all related aspects, based on the editors'

significant investigations on biofuels over the last 30 years. It also presents the latest research findings from research work carried out by contemporary researchers.

Presenting global biofuel perspectives, it examines various issues related to sustainable development of biofuels in the contexts of agriculture, forestry, industry and economic growth. It covers the 1st to 4th generation biofuels, as well as the status of biofuel resources and their potential in carbon neutral economy.

Offering a comprehensive, state-of-art overview of current and future biofuels at local and global levels, this book appeals to

administrators, policy makers, universities and research institutions.

Concepts, Methodologies, Tools, and Applications IGI

Global

Editorial We are living in an era of digitization thus moving towards a digital government.

The use of ICT in public-administration is beneficial and it is not mere a coincidence that the top 10 countries in e-government implementation (according to UN E-Government Survey 2016) are flourishing democracies. There has been a sharp rise in the number of countries using e-government to provide public services online through one stop-platform. According to

the 2016 survey, 90 countries now offer one or more single entry portal on public information or online services, or both and 148 countries provide at-least one form of online transaction services. More and more countries are making efforts through e-government to ensure and increase inclusiveness, effectiveness, accountability and transparency in their public institutions. Across the globe, data for public information and security is being opened up. The 2016 survey shows that 128 countries now provide data-sets on government spending in machine readable formats. E-government and innovation seems to have provided significant

opportunities to transform public administration into an instrument of sustainable development. The governments around the globe are rapidly transforming. The use of information and communication technology in public administration – combined with organizational change and new skills- seems to be improving public services and democratic processes and strengthening support to public policies. There has been an increased effort to utilize advanced electronic and mobile services that benefits all. Fixed and wireless broadband subscriptions have increased unevenly across regions, with

Europe leading, but Africa still lagging behind. We have to focus on these substantial region disparities and growing divide. All countries agreed, in SDG 9, that a major effort is required to ensure universal access to internet in the least developed countries. The rise of Social media and its easy access seems to have enabled an increasing number of countries moving towards participatory decision making, in which developed European countries are among the top 50 performers. But, the issues of diminishing collective thinking and rising Individual thinking are some rising issues that we will have to deal with in the future. There are more

sensitive issues like the new classification of citizens into literate-illiterate, e-literate and e-illiterate, that the governments need to look upon. It is a good sign that many developing countries are making good progress. Enhanced e-participation can support the realization of the SDGs by enabling more participatory decision making, but the success of e-government will ultimately depend upon our ability and capability to solve the contrasting issues raised due to this transition with sensitivity. In this issue of SOCRATES we have discussed, this new era of Digital Government. We have focused on what we have learned from the past and the

future we want. From discussions on the role of e-governance within the local government settings in a modern democratic state to the experience of an academia with online examination, we have tried to include every possible aspect of e-government. Paper authored by Dr. Hoff Maarten, aims to outline the role of e-governance within the setting of a local government in a modern democratic state. It is agreed that a local governmental organization needs to be fit for the purpose of serving its citizens. Fits can be tested both through universally acknowledged principles, and drivers that suit modern on-demand organizations. Paper authored by Mr. Alsaeed Abraheem and

Dr. Carl, proposes a conceptual framework which captures the main factors (both enablers and barriers) influence and contributes toward a successful implementation of eServices in countries that have unstable status. The paper draws upon Osborn and Gaebler's work, 'reinventing government', which identifies 10 principles of government transformation. This is used to examine eGov examples in the case of Syria along with previous work covering barriers and enablers to eGov activities within countries that have unstable status. The resulting derived conceptual framework provides a base to understand eGov activity for nations

going through geopolitical uncertainty. Paper authored by Mr. Saurabh Chandra highlights the initiatives taken by the Governments in India at various levels to modernise their processes and functions for delivery of information and services to the citizens, using the Information and Communication technology [ICT]. It also highlights E-Government uptake in different parts of the world, highlighting its need in India, as in developing countries like India, there is no comprehensive data on actual e-government uptake on a global scale. Paper authored by Mr. Peter Asare-Nuamah and Mr. Darko Emmanuel Agyepong highlights the various

legal policies and framework that support e-governance in Ghana as well as the challenges of implementing e-governance initiatives. The findings of the study indicate that several policies and frameworks support e-governance in Ghana but their implementations are burdened with social, cultural, political and legal constraints. The study provides some recommendations that are necessary to tackle the challenges of e-governance implementation. Paper authored by Mr. Ojo Patrick highlights battling sub-Saharan African countries. The perspective in this paper is that the emergence of democratic governments in this

region occurred through lopsided process which impacts on their governance structures.

Consequently, the institutionalization of liberal democracy has been omitted; the absence of which creates gaps between aspiration for and struggle by African people for democracy on the one hand, and the actual performance of democratic governments on the other hand. The paper identifies structural deficiencies in the current pattern of governance as the political missing link in the value chain between democracy and development in the region. The paper recommends e-governance; an administrative process that guarantees good

governance through accountability and transparency, as the necessary connecting link and panacea to bridging the observable existing gaps. Paper authored by Dr. Nandita Kaushal highlights the Plausibility of E-Governance as a Public Service Delivery Mechanism in India. It argues that there is no doubt, wherever e-governance projects have been conceived, designed and implemented with due regard to the needs of the people there positive outcomes have been visible. However, it has to be acknowledged that most of the projects are facing multiple challenges which are reducing their success rate. It recommends serious consideration

to all the issues which are hampering their efficiency. At the same time it suggests measures that must be taken up to maintain the human face of these initiatives. Paper authored by Dr. Inderjeet Singh Sodhi reviews the achievements and progress of e-government in India. The paper briefly discusses various e-government projects in India. The purpose of the paper is to delve into policy and issue of the government of India in making e-government accessible to the common person. It briefly identifies the strategic issues for achievement of e-government. This paper derives a list of key strategic factors that are appropriate for planning, designing,

development and implementation of e-government. The paper identifies the range of diverse problems, challenges and barriers planners and developers must face as they work in the e-government projects. The paper discusses prospects and future of e-government in India. The paper highlights the role of government to develop richer and deeper understanding of e-government. Paper authored by Ms. Shreyasi Ghosh attempts to trace the essence of e-government in the modern era of Indian Public Administration today as another new paradigm shift is in the offspring and slowly becoming distinct from the amorphous shape of Public Administration in the

Indian context with the ICT-blessed governance, or e-Governance. Paper authored by Ms. Stuti Saxena probes the OGD platform using a qualitative and quantitative lens. This paper shows that OGD usage is popular among the end-users in terms of the number of views and downloads of the datasets. Future research might undertake the empirical investigation of the research hypotheses advanced in the paper. Paper authored by Dr. Jyotirmoy W. Singh is developed by a contributor who has been a national and International online examiner for past six or more years. This paper is based on his experience. It seeks to

compare the traditional mode of examination with that of the online examination in citing the mode of High School Leaving Examination of Board of Secondary Education Manipur and International Baccalaureate Organisation (IBO) examination as case studies. I wish scholars and potential readers will find this issue useful. We will bring more special issues focused on e-government and other various dimensions of governance in the near future. Issue Editor Prof. Manoj Dixit Professor and Head, Department of Public Administration, University of Lucknow, Lucknow, India 12th Asian Conference on Computer Vision, Singapore, Singapore,

November 1-5, 2014, Revised Selected Papers, Part III Springer

Distributed Computing and Internet Technology Academic Press
 Environmental destruction is seen a matter of worldwide concern but as a Third World problem. Ecology and Equity explores the most ecologically complex country in the world. India's peoples range from technocrats to hunter-gathers and its environments from dense forest to wasteland. The book analyses the use and abuse of nature on

the sub-continent to reveal the interconnections of social and environmental conflict on the global scale. The authors argue that the root of this conflict is competition within different social groups and between different economic interests for natural resources. Radical both in its critique of the causes of crisis in India and in its proposals for ecological reform, Ecology and Equity is essential reading for all concerned for the Third World's in the world.
Pattern Recognition in Bioinformatics
 Routledge
 Given our rapidly growing population, the need for judicious management of essential natural resources is becoming a major challenge for

planners, managers and scientists/researchers. This book presents a multidisciplinary approach to managing water, energy and bio-resources, described in papers contributed by distinguished scientists and academics working at reputed universities and institutions around the globe. It includes 28 chapters grouped into three sections: Water Resources Management; Energy and Bio-resources Management; and Climate and Natural Resources Management, examining case studies from all over the world. These contributions address current challenges, offering modern techniques for managing these resources in various geographical regions.

This volume will provide a valuable asset for researchers and students, managers, environmentalists, hydrologists, water resource and energy managers, governmental and other regulatory bodies dealing with water, energy and bio-resources.

Concepts for Managing Large-Scale Applications
When it comes to the preparation of the examinations like UPSC and State PCS students need to have solid yet precise knowledge about the subjects from the point of view

of exam. ARIHANT's MAGBOOK provides all the study material in a concise and brief manner which is easy to digest by the students. Magbook series is 2 in 1 series i.e. it's a combination of magazines and books that offers unique advantages of both as it comprehensively covers syllabus of General Science of UPSC and State PCS Preliminary Examination. It is useful for the aspirants as it covers all the topics of the syllabus in a concise and notes format to help students in easy remembrance and quick revision. This series covers every topic of General science (Physics, Chemistry, Biology and Science & Technology) in an easy-to-

understand language which helps students grasp the topics easily and quickly. It focuses on the trends of questions of Previous Years' Civil Services Exams, Chapter-wise practice questions are given with more than 3,000 MCQs which covers the whole syllabus, Subject wise detailed explanations of Previous Years' Civil exams (2019- 2010) and 5 practice sets are also provided in the book that help the students to know latest pattern of the paper as well as its difficulty level. This book is a must for the civil services aspirants as it help them to move a step ahead towards their aim.
