## MERCER RAMOS

Legal Design for the Digital Present Routledge

Biophotonics and microscopy are highly inter-related fields in terms of both technological development and biomedical applications. Recent advances in microscopy have been paralleled by new opportunities for biophotonics, including the investigation and manipulation of biological phenomena using light and its application to biomedicine. This book contains papers from the Enrico Fermi International School of Physics on Microscopy Applied to Biophotonics, held in Varenna, Italy, in July 2011. The lectures spanned the basic science of imaging, through advanced microscopy techniques, to the state-of-the-art in biomedical imaging, and were complemented by seminars from world leaders in biophotonics. Subjects covered include: an overview of biophotonics; fundamentals of microscopy and an introduction to nonlinear

microscopy; fluorescence; lasers for biophotonics; and an introduction to ultra-microscopy.

How the US Military Transformed Combat Casualty Care in Iraq and Afghanistan Springer

Science & Business Media

This volume focuses on Time-Correlated Single Photon Counting (TCSPC), a powerful tool allowing luminescence lifetime measurements to be made with high temporal resolution, even on single molecules. Combining spectrum and lifetime provides a "fingerprint" for identifying such molecules in the presence of a background. Used together with confocal detection, this permits single-molecule spectroscopy and microscopy in addition to ensemble measurements, opening up an enormous range of hot life science applications such as fluorescence lifetime imaging (FLIM) and measurement of Förster Resonant Energy Transfer (FRET) for the investigation of protein folding and interaction. Several technology-related chapters present both the basics and current state-of-the-art, in particular of TCSPC electronics, photon detectors and lasers. The

remaining chapters cover a broad range of applications and methodologies for experiments and data analysis, including the life sciences, defect centers in diamonds, super-resolution microscopy, and optical tomography. The chapters detailing new options arising from the combination of classic TCSPC and fluorescence lifetime with methods based on intensity fluctuation represent a particularly unique highlight.

*Current Innovations and Future Directions* IOS Press

Individuals all over the world can use Airbnb to rent an apartment in a foreign city, check Coursera to find a course on statistics, join PatientsLikeMe to exchange information about one's disease, hail a cab using Uber, or read the news through Facebook's Instant Articles. The promise of connective platforms is that they offer personalized services and contribute to innovation and economic growth, while bypassing cumbersome institutional or industrial overhead. In *The Platform Society*, Van Dijck, Poell and De Waal offer a comprehensive

analysis of a connective world where platforms have penetrated the heart of societies-disrupting markets and labor relations, circumventing institutions, transforming social and civic practices and affecting democratic processes. This book questions what role online platforms play in the organization of Western societies. First, how do platform mechanisms work and to what effect are they deployed? Second, how can platforms incorporate public values and benefit the public good? The Platform Society analyzes intense struggles between competing ideological systems and contesting societal actors-market, government and civil society-raising the issue of who is or should be responsible for anchoring public values and the common good in a platform society. Public values include of course privacy, accuracy, safety, and security, but they also pertain to broader societal effects, such as fairness, accessibility, democratic control, and accountability. Such values are the very stakes in the struggle over the platformization of societies around the globe. The Platform

Society highlights how this struggle plays out in four private and public sectors: news, urban transport, health, and education. Each struggle highlights local dimensions, for instance fights over regulation between individual platforms and city governments, but also addresses the level of the platform ecosystem as well as the geopolitical level where power clashes between global markets and (supra-)national governments take place.

**A Future for Public Service Television** Shell Education

This free course, 'Problem populations, 'problem' places, looks deeper into the entanglements of welfare, crime and society. It encourages you to think through these entanglements through a focus on 'problem' populations and 'problem' places. It includes treatment of the victims of Hurricane Katrina that hit the US in 2007, and also of the governance of urban populations in the context of Britain (council estates) and France (banlieues).

**The Palgrave Handbook of Methods for Media Policy Research** SAGE

Schistosomiasis is Africa's

second most common parasitic disease. Less than 20 years ago, over 200 million were infected. In many high-risk areas the Schistosomiasis Control Initiative (SCI) has been helping to tackle the disease by offering treatments to millions of children. This book tells the story of a man, Alan Fenwick, who founded the SCI to control the worms and snails and so improve the lives of many burdened with the disease as well as reducing the numbers infected. Over this period SCI and the Ministries of Health and Education in 16 countries delivered over 220 million treatments. Treatment coverage of up to 75% has been achieved. Widely recognised as a cost-effective and successful intervention, SCI's knock-on effects include improving overall physical health, school attendance and future prospects for millions of people.

Creative Trespassing Springer Science & Business Media

This book presents the main results of an extensive programme of research that was financed by the European Commission. The study was conducted in 29 European countries and

each author analyses European trends in broadcasting from different but complementary perspectives.

Use strategies developed by Dr. Timothy Rasinski to help students improve their phonemic awareness, phonics, spelling, and vocabulary skills

*Adventures in Cancerland*  
Thieme

"This volume is an important contribution to academic and activist knowledge. It is ambitious in the range of issues areas it covers, challenging in the depth and breadth of analysis of the individual chapters. All in all, this is a treasure trove of new insights, experiences, and innovative approaches to politically committed and scholarly work that aim to make a difference."--

Marianne Franklin,  
Goldsmiths, University of London --

**?Problem? populations, ?problem? places**

Fordham Univ Press

This book covers a topic of considerable current interest and presents many of the most significant research findings available to date.

Workers at the forefront of research on hormone replacement therapy and the implications for the risk of breast cancer were invited to attend a special Conference at the Royal Society of Medicine in London in September, 1991, where the latest data were presented to a distinguished audience and the implications of this research were discussed. The volume reviews various aspects of HRT and breast cancer, the physiology of the menopause, the current use of HRT in practice, osteoporosis and epidemiology and presents results from a range of European, American and Australian studies on the role of breast cancer and HRT, finishing with an overview of benefits, use and cost-effectiveness and a general summary. The book represents a definitive statement of current knowledge in this field and an informative update on the implications of recent research. It will be a valuable addition of special significance to the libraries of all those concerned with hormone replacement therapy and the study of breast cancer.

"A comprehensive overview of clinical laboratory toxicology services and analytes"--  
*Focus on Stroke Research*  
Oxford University Press

This volume is based on an international symposium held during September 9-12, 1986 in Bocca di Magra, Italy. The intent of the organizers was to bring together expert practitioners of fluorescence spectroscopy, particularly as applied to biological systems, to assess recent developments in the field and discuss future directions. At the same time the meeting was intended to honor the singular and outstanding scientific career of Gregorio Weber on the occasion of his seventieth birthday. Gregorio Weber is truly the pioneer in the application of fluorescence methods to biochemistry and biophysics. A complete list of his scientific contributions to fluorescence and to protein biochemistry is beyond the scope of this

preface. Suffice it to say that since his initial landmark articles on fluorescence, published in the late 1940's and early 1950's, Gregorio Weber has continued to make seminal contributions to both the theory and practice of fluorescence and, contrary to many who might be tempted to rest on their laurels, he shows no signs of slackening his pace. In addition to his more obvious tangible contributions to the scientific field, Gregorio Weber has made equally valuable contributions of another type. Specifically, he has had the most profound impact, both professionally and personally, on generations of young scientists.

A stroke occurs when the blood supply to the part of the brain is suddenly interrupted (ischemic) or when a blood vessel in the brain bursts, spilling blood into the spaces surrounding the brain cells (hemorrhagic). Generally, there are three treatment stages for stroke: prevention, therapy immediately after stroke, and post-stroke rehabilitation. Therapies to prevent stroke are

based on treating an individual's underlying risk factors. This book includes within its scope the prevention, risk factors, symptoms, diagnosis, treatment, and rehabilitation of stroke. Leading-edge scientific research from throughout the world is presented.

How do television broadcasters take account of the interests and needs of viewers? What are they required to do by laws and regulations? What do they do of their own initiative? How do they respond to the attitudes and opinions of individual consumers, and to growing pressure from viewer and consumer groups?

*New Tools in Chemical, Physical and Life Sciences*  
Government Printing Office

This book illustrates the significance of various optical spectroscopy and microscopy techniques, including absorption spectroscopy, fluorescence spectroscopy, infrared spectroscopy, and Raman spectroscopy for deciphering the nature of biological molecules. The content of this book chiefly focuses on (1) the principle, theory, and

instrumentation used in different optical spectroscopy techniques, and (2) the application of these techniques in exploring the nature of different biomolecules (e.g., proteins, nucleic acids, enzymes, and carbohydrates). It emphasizes the structural, conformational and dynamic, and kinetic including the changes in biomolecules under a range of conditions. In closing, the book summarizes recent advances in the field of optical spectroscopic and microscopic techniques.  
Media Regulation  
Stationery Office  
Citing the critical importance of empirical work to social movement research, the editors of this volume have put together the first systematic overview of the major methods used by social movement theorists. Original chapters cover the range of techniques: surveys, formal models, discourse analysis, in-depth interviews, participant observation, case studies, network analysis, historical methods, protest event analysis, macro-organizational analysis, and comparative politics. Each chapter includes a methodological

discussion, examples of studies employing the method, an examination of its strengths and weaknesses, and practical guidelines for its application.

*Broadcasters and Citizens in Europe* The Open University

This book presents original results on the leading edge of cancer research. Topics discussed include imaging of chondrosarcoma; novel nutrient mixtures inhibiting chondrosarcoma invasion and metastasis parameters; defective estrogen signaling is the highest risk for breast cancer; review of the cancer genomic landscape; reprogramming of metabolic pathways and cancer stem like cells; promising natural products as anti-cancer agents against neuroblastoma; oncofertility; and molecular mechanisms involved in myelodysplastic syndromes.

### **Agony and Absurdity**

Createspace Independent Publishing Platform  
The digital media environment is characterized by an abundance and diversity of content, a multiplicity

of platforms, new modes of content production, distribution and access, and changed patterns of consumer and business behaviour. This has challenged the traditional model of public service broadcasting (PSB) in diverse ways. This book explores whether and how PSB should adapt to reflect the conditions of the digital media space so that it can effectively and efficiently continue to serve its public mandate. Drawing on literature on media governance in media and communication science, public international law as well as discussions on cyberlaw, Mira Burri maps and critically analyses existing policy and scholarly debates on PSB transformation. She challenges some of conventional rationales for reform, identifies new ones, as well as exposes the limitations placed upon existing and future policy solutions by global media governance arrangements, especially in the fields of trade, copyright and Internet governance. The book goes on to advance a future-oriented model of Public Service Media, which is capable of matching an environment of technological and of

governance complexity. As a work that explores how public interest objectives can be pursued efficiently and sustainably in the digital media ecology, this book will be of great interest and use to students and researchers in media law, information technology law, and broadcast media studies, as well as to policy-makers.

### The Science of Cancer

Nova Publishers

Living with breast cancer can be absurd. Often, though, the absurdities are kept behind the curtain and shared only with other women living in Cancerland-the tactless comment from a co-worker about how attractive we used to be when we still had hair, breast implants that explode or prostheses that are left behind, accidentally, in the vacation house, and a new wig that makes a woman feel more like Tina Turner than herself. You'll never hear more raucous laughter than that coming from a room full of women sharing their breast cancer experiences. And, in a hot second, that room can turn into a puddle full of tears, given the agony of cancer-saying goodbye to parts of ourselves that are taken in the name of

treatment, or to our sisters who do not survive this disease. In bringing these stories forward, we share the painful, the profound, and the ridiculous. We heal, too. And, through these stories, we hope to

increase the understanding of the young patient and survivor experience, and to illuminate the dark spaces for those who will walk this path in the future.
