An Interdisciplinary Guide to Integrated Care Lippincott Williams & Wilkins

Drug Discovery and Evaluation has become a more and more difficult, expensive and time-consuming process. The effect of a new compound has to be detected by in vitro and in vivo methods of pharmacology. The activity spectrum and the potency compared to existing drugs have to be determined. As these processes can be divided up stepwise we have designed a book series "Drug Discovery and Evaluation" in the form of a recommendation document. The methods to detect drug targets are described in the first volume of this series "Pharmacological Assays" comprising classical methods as well as new technologies. Before going to man, the most suitable compound has to be selected by pharmacokinetic studies and experiments in toxicology. These preclinical methods are described in the second volume „Safety and Pharmacokinetic Assays". Only then are first studies in human beings allowed. Special rules are established for Phase I studies. Clinical pharmacokinetics are performed in parallel with human studies on tolerability and therapeutic effects. Special studies according to various populations and different therapeutic indications are necessary. These items are covered in the third volume: „Methods in Clinical Pharmacology".

Handbook of Nutraceuticals Volume I Lippincott Williams & Wilkins

As soon as Dr. Stephen DeFelice coined the phrase nutraceutical, product and supplement developers swung into action. Yet among the numerous books available on nutraceuticals, there is none that systematically lists, categorizes, and analyzes nutraceutical extracts and formulations in a pharmacopoeia-like manner. *Handbook of Nutraceuticals, Volume 1: Ingredients, Formulations, and Applications* lists information on many ingredients used in nutraceuticals, developing their formulations and applications. The book includes contributions from experts with pharmaceutical backgrounds, providing an examination of nutraceuticals from a pharmaceutical perspective. Building a foundation with coverage of historical background, definitions, and challenges, the book offers insight into nutraceutical ingredients from plant, animal, and mineral origin. It then covers the characterization of nutraceuticals' physicochemical, analytical, pharmacological, and pharmacokinetic classification, followed by information on regulatory requirements. The book highlights applications in cardiovascular disease, bone and joint treatments, diabetes management, weight management, skin health, probiotics and prebiotics, tranquilizing medicinal plants, dietary foods, and more. Interest in new diet regimens and new products for increased health and longevity will continue to grow, giving dietary supplements an increasing amount of cupboard space in most households. With quality of content unsurpassed by many resources, the book discusses the characterization processes for nutraceuticals based on the contributors' experience in pharmaceuticals. It then explores how those proven techniques may be applied to the development and manufacture of nutraceutical products.

La Atención Prehospitalaria (APH) es uno de los pilares fundamentales de los Sistemas de Emergencias Médicas. Los orígenes y el desarrollo de los modelos clásicos de este tipo de atención en Norteamérica y Europa han sido una pieza sólida que ha permitido la creación de diferentes modelos a nivel mundial, basados en estas dos grandes tendencias. Los modelos han evolucionado de diferentes maneras, de acuerdo a la realidad de cada país, y dentro de esta diversa realidad, claramente la mayor evolución la han logrado los países que desarrollaron paralelamente procesos educativos especializados en esta área. Estos procesos de educación superior en APH han sufrido un avance muy importante, especialmente en las dos últimas décadas en Latinoamérica. Colombia ha sido uno de los países que más ha generado procesos de desarrollo en APH, incluyendo procesos educativos y legislativos. Textos especializados como éste, donde se plasma la experiencia acumulada por un grupo de profesionales que han desarrollado gran parte de su desempeño laboral, en el área de formación del personal de APH, son un ejemplo de cómo se puede avanzar y permitir que información actualizada, basada en evidencia científica e interpretada por personal experto, llegue a estudiantes de las carreras de formación, no solo en Colombia, sino en toda América Latina. Estos procesos de educación superior en APH han sufrido un avance muy importante, especialmente en las dos últimas décadas en Latinoamérica.
