TI-Nspire For Dummies Python for the TI-Nspire CX II technology calculator is a collection of real-world Python programs written explicitly for this device. Because of the nature of Python, these programs are short, easy to read, easy to enter into the calculator, and most importantly easy to understand - even for beginners. Why Python? Python is the world's most popular programming language. It is an ideal language for handheld calculators. The Python programming language is non-proprietary, so it runs everywhere, even on desktop and laptop computers with only minor modifications from what you'll find in this book, and even then only in a very few

cases. Python handles number crunching well, and with its lists, strings, and other data structures, it powerfully handles a very wide variety of programming tasks. But perhaps the biggest advantage of learning Python via your programmable calculator is that this knowledge will be applicable and useful no matter what computers or systems you might work with in the future. Learn it once and you'll have a new life skill of great value. The TI-Nspire CX II technology calculator is a very powerful learning tool, and with the addition of Python its mind-expanding capabilities are truly awesome!

"English Language Learner (ELL) students present a unique challenge in the teaching of high school algebra. They are at the same time learning the English language and the sometimes confusing language of mathematics. Research shows that the use of graphing calculators may increase the comprehension of the difficult subject matter, while at the same time engaging the students' interest in math. I selected a small group of ELL students, and in understanding the students' need for visual and kinesthetic

instruction, I modified my teaching by introducing the TI-Nspire® CX CAS Graphing Calculator into the intermediate algebra curriculum. To meet my students' needs, I created a series of handouts (graphic organizers) and investigation activities (step-by-step instruction). The main objective was to see if NWEA MATH MAP RIT scores increased. The study time was abbreviated, resulting in inconclusive evidence; however, anecdotal evidence suggests that student engagement and motivation increased." --
