drives. It explains every facet of application of power electronics to the control of electric motors in industrial drives. Power Semiconductor Drives by S. Sivanagaraju Device with three junction. Explanation:- Silicon controlled rectifier or semiconductor-controlled rectifier is a four-layer solid-state current-controlling unidirectional devices (i.e. can conduct current only in one direction).

The silicon control rectifier (SCR) consists of four layers of semiconductors, which form NPNP or PNP structures, having three P-N junctions labeled J 1, J 2 and J 3, and three terminals. Most Important MCQ Of Power electronics with answer ...Power electronics is the application of solid-state electronics to the control and conversion of electric power. The first high power

electronic devices were mercury-arc valves. In modern systems, the conversion is performed with semiconductor switching devices such as diodes, thyristors, and power transistors such as the power MOSFET and IGBT. In contrast to electronic systems concerned with transmission and processing of signals and data, in power electronics substantial

amounts of electrical Power electronics - Wikipedia Power Semiconductor Devices The first SCR was developed in late 1957. Power semiconductor devices are broadly categorized into 3 types:

1. Power diodes (600V,4500A)
2. Transistors
3. Thyristors (10KV,300A,30MW)

Thyristor is a four layer three junction pnpn semiconductor switching device. It has 3 terminals these are

anode, cathode and gate. SCRs are solid state device, so they are compact, possess high reliability and have low loss.
