Teacher Edition with Solutions 2015 Cengage Learning

This is the fourth book in the Math Made a Bit Easier series by independent author and math tutor Larry Zafran. As the second "main" book of the series, it builds upon the first book which covered key topics in basic math. Before working with this book, it is absolutely essential to have completely mastered all of the material from the first book. Continuing the roadmap which began with the first book, this book covers the basics of the following topics of algebra and geometry: Expressions, equations, inequalities, exponents, factoring, the FOIL method, lines, angles, area, perimeter, volume, triangles, the Pythagorean Theorem, linear equations, and the Cartesian coordinate plane. Again, if the prerequisite material from the first book has not been fully learned, the student will almost certainly proclaim that this book and its material are "hard," and will continue to feel frustrated with math. There is no way to avoid learning math step-by-step at one's own pace. This book emphasizes concepts which commonly appear on standardized exams. While it does not go into great detail about any concept, it explains the material conversationally and "in plain English." Some practice exercises and self-tests are included. Mastery of these concepts will likely be sufficient for the student to achieve his/her math goals, but more advanced exams may require some knowledge of material presented in later books in the series.

Multivariable Mathematics combines linear algebra and multivariable mathematics in a rigorous approach. The material is integrated to emphasize the recurring theme of implicit versus explicit that persists in linear algebra and analysis. In the text, the author includes all of the standard computational material found in the usual linear algebra and multivariable calculus courses, and more, interweaving the material as effectively as possible, and also includes complete proofs. * Contains plenty of examples, clear proofs, and significant motivation for the crucial concepts. * Numerous exercises of varying levels of difficulty, both computational and more proof-oriented. * Exercises are arranged in order of increasing difficulty.

Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them. Helping students grasp the "why" of algebra through patient explanations, Hirsch and Goodman gradually build students' confidence without sacrificing rigor. To help students move beyond the "how" of algebra (computational proficiency) to the "why" (conceptual understanding), the authors introduce topics at an elementary level and return to them at increasing levels of complexity. Their gradual introduction of concepts, rules, and definitions through a wealth of illustrative examples—both numerical and algebraic—helps students compare and contrast related ideas and understand the sometimes-subtle distinctions among a wide variety of situations. This author team carefully prepares students to succeed in higher level mathematics.

Similar to the Samaritan woman, Ms. Esther Digniin shares a compelling story of a life faced with sweeping challenges that led to a search for and acceptance of Christ. As a young girl, she held a keen awareness of the presence of God and his involvement in life's circumstances. Emerging through injury in the midst of the Somali civil war, collapse and loss of her world, and dislocation to foreign countries, Esther begins a journey of awakening from the incorrect interpretation of God ascribed by the faith she was born into to a clear realization of the true nature of God and his direct involvement and assistance one can avail in shaping a new life and achieving wonderful successes. In this enthralling tale of personal experience, Ms. Digniin shares with the reader how she personally challenged truths which became eminent and how others can confront specific questions in their lives to gain similar understanding and application in their walk through life.
