Flash Remoting MX lets developers  
 easily integrate rich Macromedia Flash  
 content with applications that are built  
 using Macromedia ColdFusion MX,  
 Microsoft .NET, Java, PHP, or SOAP-based  
 web services. The result is complex  
 client/server applications that more  
 closely resemble desktop applications  
 than traditional web pages. Gone is the  
 click/wait/reload approach of HTML. Your  
 web application uses Flash as the front  
 end while Flash Remoting handles the  
 communication behind the scenes with  
 the application server. All the end user  
 knows is that it's fast and flexible. The  
 potential uses for Flash Remoting are  
 endless. Flash Remoting: The Definitive  
 Guide will help you understand this  
 breakthrough technology and use it to  
 build your own Rich Internet Applications  
 (RIAs). Build applications that connect to  
 a database, file system, or other server-  
 side technologies. Or, use Flash  
 Remoting to create: online stores that  
 feature catalogs and shopping cart  
 systems sound and video clip libraries  
 banner ads with built-in shopping carts,  
 click-through tracking, and site search  
 capabilities new controls that can be  
 used in place of HTML extensions to  
 Flash, Dreamweaver, Fireworks, and  
 more front-ends to databases for

administrators The book begins with  
 Flash Remoting basics: setup,  
 installation and an introduction to its  
 underlying concepts. Next, you'll explore  
 the Flash's User Interface components as  
 they relate to Flash Remoting. Then,  
 you'll gain insights into Flash Remoting  
 internals and the Remoting API. The  
 book is rich with examples that you will  
 be able to run on your own system. The  
 next section focuses on the server-side  
 environment that you'll use for your  
 applications. Individual chapters cover  
 Flash Remoting with ColdFusion, Server-  
 Side ActionScript, Java, ASP.NET, and  
 PHP. The last section covers more  
 advanced Flash Remoting techniques,  
 such as calling web services from Flash  
 Remoting, extending objects and UI  
 controls, best practices, and debugging.  
 Plus there is a detailed chapter  
 demonstrating a real-world application.  
 The book concludes with a Flash  
 Remoting API reference. Developers who  
 are looking to create Rich Internet  
 Applications with Flash will find Flash  
 Remoting: The Definitive Guide  
 indispensable.

Ansible is an Open Source IT automation  
 tool. This book contains all of the  
 obvious and not-so-obvious best  
 practices of Ansible automation. Every  
 successful IT department needs  
 automation nowadays for bare metal  
 servers, virtual machines, could,  
 containers, and edge computing.  
 Automate your IT journey with Ansible  
 automation technology. You are going to  
 start with the installation of Ansible in  
 Enterprise Linux, Community Linux,  
 Windows, and macOS using the most  
 command package manager and  
 archives. Each of the 200+ lessons  
 summarizes a module: from the most

important parameter to some Ansible code and real-life usage. Each code is battle proved in the real life. Simplifying mundane activities like creating a text file, extracting and archiving, fetching a repository using HTTPS or SSH connections could be automated with some lines of code and these are only some of the long lists included in the course. There are some Ansible codes usable in all the Linux systems, some specific for RedHat-like, Debian-like, and Windows systems. The 20+ Ansible troubleshooting lesson teaches you how to read the error message, how to reproduce, and the process of troubleshooting and resolution. Are you ready to automate your day with Ansible? Examples in the book are tested with the latest version of Ansible 2.9+ and Ansible Core 2.11+.

The 2010 edition of the Passive and Active Measurement Conference was the 11th of a series of successful events. Since 2000, the Passive and Active Measurement (PAM) conference has provided a forum for presenting and discussing

innovative and early work in the area of Internet measurements. PAM has a tradition of being a workshop-like conference with lively discussion and active participation from all attendees. This event focuses on research and practical applications of network measurement and analysis techniques. This year's conference was held at ETH Zurich, Switzerland. PAM 2010 attracted 79 submissions. Each paper was carefully reviewed by at least three members of the Technical Program Committee. The reviewing process led to the acceptance of 23 papers. The papers were arranged in nine sessions covering the following areas: routing, transport protocols, mobile devices, topology, measurement infrastructure, characterizing network usage, analysis techniques, traffic analysis, and the Web. We are very grateful to Endace Ltd. (New Zealand), Cisco Systems Inc. (USA), armasuisse (Switzerland) and the COST Action TMA whose sponsoring allowed us to keep registration costs low and to offer several travel grants to PhD students. We are also grateful to ETH Zurich for sponsoring PAM as a host.

The International Conference on Networking (ICN01) is the first conference in its series aimed at stimulating technical exchange in the emerging and important field of networking. On behalf of the International Advisory Committee, it is our great pleasure to welcome you to the International Conference on Networking. Integration of fixed and portable wireless access into IP and ATM networks presents a cost effective and efficient way to provide seamless end to end connectivity and ubiquitous access in a market where demands on Mobile and Cellular Networks have grown rapidly and predicted to generate billions of dollars in revenue. The deployment of broadband IP based technologies over Dense Wavelength Division Multiplexing (DWDM) and integration of IP with

broadband wireless access networks (BWANs) are becoming increasingly important. In addition, fixed core IP/ATM networks are constructed with recent move to IP/MPLS over DWDM. More over, mobility introduces further challenges in the area that have neither been fully understood nor resolved in the preceding network generation. This first Conference ICN01 has been very well perceived by the International networking community. A total of 300 papers from 39 countries were submitted, from which 168 have been accepted. Each paper has been reviewed by several members of the scientific Program Committee.
