This volume comprises select papers from the International Conference on Microelectronics, Computing & Communication Systems (MCCS 2015). Electrical, Electronics, Computer, Communication and Information Technology and their applications in business, academic, industry and other allied areas. The main aim of this volume is to bring together content from international scientists, researchers, engineers from both academia and the industry. The contents of this volume will prove useful to researchers, professionals, and students alike.

This proceedings volume presents new methods and applications in applied economic research with an

emphasis on advances in panel data analysis.

Featuring papers presented at the 2017 International Conference on Applied Economics (ICOAE) held at Coventry University, this volume provides current research on econometric panel data methodologies as they are applied in microeconomics, macroeconomics, financial economics and agricultural economics. International Conference on Applied Economics (ICOAE) is an annual conference that started in 2008 designed to bring together economists from different fields of applied economic research in order to share methods and ideas. Applied economics is a rapidly growing field of economics that combines economic theory with econometrics to analyse economic problems of the real world usually with economic policy interest. In addition, there is growing interest in the field for panel data estimation methods, tests and techniques. This volume makes a contribution in the field of applied economic

research in this area.

Featuring country specific studies, this book will be of interest to academics, students, researchers, practitioners, and policy makers in applied economics and economic policy.

This book constitutes the thoroughly refereed conference proceedings of the First International Joint Conference on Electronic Voting, E-Vote-ID 2016, held in Bregenz, Austria, in October 2016. The 14 full papers presented were carefully reviewed and selected from 57 submissions. They represent a wide range of technological proposals for different voting settings (be it in polling stations, remote voting or even mobile voting) and case studies from different countries already using electronic voting or having conducted first trial elections.

This book contains revised selected papers presented at 3 workshops held at the 17th IFIP TC 13 International Conference on Human-Computer Interaction, INTERACT 2019, which was held in September 2019 in Paphos, Cyprus. The workshops are: - Beyond Computers: Wearables, Humans, And Things - WHAT! - User Experiences and Wellbeing at Work (UX@Work) - Workshop on Handling Security, Usability, User Experience and Reliability in User-Centered Development Processes. The 12 papers included in this volume were carefully reviewed and selected from numerous submissions. They show advances in the field of HCI dealing with topics such as wearables, user experience and wellbeing at work, security, usability, user experience and reliability in user-centered development processes.

Time Time b a Space

Space Time Time c d

Space Space Fig. 1

Different possible scales for growth and innovation analyses spatial dimension, the sectoral dimension and the time dimension are represented. In Fig. 1a,

regional development analyses are revealed, where the economy is sliced vertically into regions and their dynamics are investigated. The study of the evolution of industries, typical of evolutionary industrial economics, is represented in Fig. 1b, where the economy is divided horizontally into sectoral slices. This approach has progressed considerably in recent years (see Malerba 2006, for a recent survey). Modifications of industries have important spatial implications, which however are not normally at the core of these analyses even though spatial patterns of innovation differ greatly from sector to sector (Breschi 2000). Our approach operates in the manner of Fig. 1a and we will focus on regions, extending the analysis to industries only where this is regionally and structurally relevant. Hence, the approach in the book belongs to the tradition of regional development theories, but, in contrast to the more traditional analyses, we will not consider the region as an economic unit per se. Rather, interactions between and within regions are very relevant to the

performance of individual regions in an integrated world and will be at the core of the analyses of the following chapters. ICT for assessment and rehabilitation in Alzheimer's disease and related disorders Springer Nature

To survive in today's competitive business environment, marketing professionals must look to develop innovative methods of reaching their customers and stakeholders. Web 2.0 provides a useful tool in developing the relationships between business and consumer. The Handbook of Research on Integrating Social Media into Strategic Marketing explores the use of social networking and other online media in marketing communications, including both best practices and common pitfalls to provide comprehensive coverage of the topic. This book is intended for marketing professionals, business managers, and anyone interested in how social media fits into today's marketing environments. **Growth and Innovation of Competitive Regions** Elsevier
Over the past two decades, projects

supported by the International Development Research Centre (IDRC) have critically examined the ways in which information and communications technologies (ICTs) can be used to improve learning, empower the disenfranchised, generate income opportunities for the poor, and facilitate access to healthcare in Africa, Asia, Latin America and the Caribbean. Considering that most development institutions and governments are currently attempting to integrate ICTs into their practices, it is an opportune time to reflect on the research findings that have emerged from IDRC's work and research in this area. "Connecting ICTs to Development" discusses programmatic investments made by IDRC in a wide variety of areas related to ICTs, including infrastructure, access, regulations, health, governance, education, livelihoods, social inclusion, technical innovation, intellectual property rights and evaluation. Each chapter in this book analyzes the ways in which research findings from IDRC-supported projects have contributed to an evolution of thinking, and

discusses successes and challenges in using ICTs as tools to address development issues. The volume also presents key lessons learned from ICT4D programming and recommendations for future work. [Handbook of Production Economics](#) Springer This book constitutes refereed proceeding of the Second International Cognitive Cities Conference, IC3 2019, held in Kyoto, Japan, in September 2019. The 37 full papers and 46 short papers were thoroughly reviewed and selected from 206 submissions. The papers are organized according to the topical sections on cognitive city for special needs; cognitive city theory, modeling and simulation; XR and educational innovations for cognitive city; educational technology and strategy in cognitive city; safety, security and privacy in cognitive city; artificial intelligence theory and technology related to cognitive city; Internet of Things for cognitive city; business application and management for cognitive city; big data for cognitive city; engineering technology and applied science for cognitive city; maker, CT and STEAM

education for cognitive city. *Smart City 360°* Springer As a consequence of globalization, news, ideas and knowledge are moving quickly across national borders and generating international spillovers. So too, however, are economic and financial crises. Combining a variety of methods, concepts and interdisciplinary approaches, this book provides an in-depth examination of these structural changes and their impact. Assessing the implications of globalization for businesses and sectors, chapters focus on the interdependencies between different economic and political layers, and explore topics such as human capital, creativity, innovation, networks and collaboration. [ECPPM 2021 - eWork and eBusiness in Architecture, Engineering and Construction](#) Springer This book constitutes the proceedings of the Second International Conference on Internet Science, INSCIE 2015, held in Brussels, Belgium, in May 2015. The 10 papers presented were carefully reviewed and selected for inclusion in

this volume. They were organized in topical sections named: internet and society; internet and governance; and internet and innovation.

Information and Communication Technologies in Education, Research, and Industrial Applications
Springer

The physicist Neils Bohr allegedly wrote that "Prediction is very difficult, especially about the future". Many academics believe that serious scholars should never attempt to write about the future, but some awareness of the ways in which the future of e-government may evolve is needed if well-grounded long-term decisions about issues such as infrastructures, institutions and educational programs are to be made. In addition, future-oriented research is of the utmost importance for informed public debate about technological developments with far reaching societal implications. This book marks the 25th anniversary of the permanent study group on e-government of the European Group for Public Administration, and the papers here were first

presented at their 2012 meeting in Bucharest, Romania. The invited authors were not asked for rigorous analyses based on systematic empirical research or deeply rooted in a theoretical framework; instead they were challenged to write thoughtful and measured, but provocative, essays about ICT and public administration in the coming decade. Their contributions are reflections on the nature of new and emerging technologies in the public sector and their impact on government and on democracy itself. The book is divided into three sections: the past and present as starting point for thinking about the future of e-government, imagining the future of government, and implications for research and practice. The many questions raised by developments in ICT for future public administration are presented in a clear and thought-provoking manner, and merit more debate. This volume represents a departure from the normal run of academic publications. It is intended both to provoke academics and administrators to think

about questions which will affect all of our futures and to offer a range of creative ideas about how the opportunities presented by technology can be exploited to provide better government and governance.

th The 11 Working Conference of IFIP WG 8.6, Open-IT Based Innovation: Moving Towards Cooperative IT Transfer and Knowledge Diffusion, organized in Madrid in October 22-24, 2008, follows the series started in Oslo in 1995 and continues in the footprints of the past year's conference in Manchester. This year, although the Madrid Conference addresses the usual topics covered in previous WG8.6 conferences, the emphasis is on the issue of open innovation and its relationships with technology transfer and diffusion in the field of information technology. This issue is deeply modifying the way that knowledge is generated, shared, transferred, diffused, and used across

the world as a side effect of globalization. It affects the organizational structure, partnerships, roles assumed by stakeholders, and technology transfer and diffusion models and instruments. Industry, academia, and governments are simultaneously concerned. Although the concept applies to all industrial sectors, IT companies were early innovators. The analysis of the contents of this book allows the identification of some trends in technology transfer and diffusion issues as a part of the innovation process. The same problem is addressed in very different ways and extrapolation is not straightforward. Even innovation terminology is not clearly shared by different subcultures in the field.

ICT, Public Administration and Democracy in the Coming Decade Frontiers Media SA

Being socially and geographically mobile is generally seen as one of the central aspects of women's wellbeing. Alongside health, education and political participation, mobility is indispensable in order for

women to reach goals such as agency and freedom. Building on new philosophical underpinnings of 'mobility', whereby society is seen to be framed by the convergence of various mobilities, this volume focuses on the intersection of mobility, social justice and gender. The authors reflect on five highly interdependent mobilities that form and reform social life: * The origin, divisions and implication of physical travel for work, leisure, family life, migration and escape. * Physical movement of goods and their gendered impacts. * The gendered content of imagined travel through televisual images. * Virtual travel via the Internet. * Communicative travel through person-to-person messages via letters, telephone, fax and mobile phone. This volume covers an entire range of social, cultural, religious, economic, ethnic and political factors and processes.

Case Studies in Service Innovation Springer Science & Business Media
This book contains a series of papers that were presented during the Sixth IEA International

Symposium on Human Factors in Organizational Design and Management (ODAM '98). The Symposium was sponsored jointly by the International Ergonomics Society, the Dutch Ergonomics Society, NIA TNO and The Ministry of Social Affairs and Employment. These experiences include new ideas, research results, tools, and applications of human-organization interface technology to improving work systems. New technology, changing work force demographics, changing attitudes and values about work and what constitutes real quality of work life, have heightened the need for a true systems approach to optimizing the interfaces between humans, technology and organizational structures and processes. Growing world competition, and the related need to make organizations more productive and efficient, have further intensified this need to improve work systems. This need is reflected in the rapid development of macroergonomics methods and applications since the first of these ODA M Symposia in 1984. What then was recognized by only a few researchers

and practitioners has now become a widely accepted part of the human factors/ergonomics discipline. As demonstrated by the papers contained herein, application of macroergonomics is having a very real positive impact on sociotechnical systems internationally. Included in this volume are a broad selection of papers on theory, methodology, tools, research findings, and case studies from leading professionals throughout the world. This volume thus provides the reader with some of the latest developments in human-organization interface technology. Collectively, these papers should provide the reader with a good conceptual understanding of the ergonomic approach to work system design, and of its tremendous potential for improving work systems and the human condition in all cultures.

Beyond Interactions
Springer

This book contains revised and extended versions of the best papers presented at the 16th International Conference on Information and Communication

Technologies in Education, Research, and Industrial Applications, ICTERI 2020, held in Kherson, Ukraine, in October 2020. Due to the COVID-19 pandemic the conference was held online. The 8 revised full papers included in this volume were carefully reviewed and selected from 347 initial submissions. The papers are organized in the following topical sections: ICT in education; ICT in research and industry.

Human Systems Engineering and Design (IHSED 2021): Future Trends and Applications MDPI

This book constitutes the refereed proceedings of the First European Conference on Technology Enhanced Learning, EC-TEL 2006. The book presents 32 revised full papers, 13 revised short papers and 31 poster papers together with 2 keynote talks. Topics addressed include collaborative learning, personalized learning, multimedia content, semantic web, metadata and learning, workplace learning, learning repositories and infrastructures for learning, as well as experience reports, assessment, and case

studies, and more.

Internet Science Springer
Nature

The arrival of Information and Communication Technology may play a role in restoring competitiveness, since these technologies are also a factor in relaxing the constraints specific to SMEs. ICT makes a number of services possible in a large range of processes and transactions within and between companies. Internally, ICT applications can improve knowledge and information management practices; they can also allow more rapid and more reliable transactions between businesses (B2B) and between businesses and consumers (B2C). They are equally quite effective in improving external business communications and service quality for both new and existing clients. They also appear to be a source of competitive advantage for SMEs under certain conditions. Few studies have focused on the ways that SMEs can use ICT to improve and defend their competitive positions. This book provides a synthesis of the advantages of ICT for SMEs. Seven chapters illustrate the technologies

used in such companies. Each of these chapters provides a theoretical and/or practical view of the way that SMEs can use ICT. This book is an indispensable reference for both academics and for practitioners.

Criminology Theory and Terrorism

Anthem Press
This three-volume handbook includes state-of-the-art surveys in different areas of neoclassical production economics. Volumes 1 and 2 cover theoretical and methodological issues only. Volume 3 includes surveys of empirical

applications in different areas like manufacturing, agriculture, banking, energy and environment, and so forth.

Gendered Mobilities

Edward Elgar Publishing
This Brief presents new approaches and innovative challenges to address bringing

technology into community-oriented policing efforts.

“Community-oriented policing” is an approach that encourages police to develop and maintain personal relationships with citizens and community organizations. By developing these partnerships, the goal is to enhance trust and legitimacy of police by the community (and vice versa), and focus on engaging the community crime prevention and detection efforts for sustainable, long-term crime reduction. The contributions to this volume emphasize how technological innovations can advance community-

oriented policing goals, such as: -Strengthening community policing principles through effective and efficient tools, procedures and approaches - Accelerating communication between citizens and police forces - Early identification, timely intervention, as well as better crime reporting, identification of risks, unreported and undiscovered crime through the community Contributions to this volume were developed out of the Next Generation Community Policing (NGCP) International Conference was co-organized by nine contributing research and development projects, funded by the Horizon 2020 SECURITY Program of the European Commission. It will be of interest to researchers in criminology and criminal justice, as well as related fields such as sociology, public health, security, IT and public policy. This book is open access under a CC BY license.
