Cumulative listing Springer Science & Business Media

This book constitutes the refereed proceedings of the 8th International Conference on Model Transformation, ICMT 2015, held in L'Aquila, Italy, in July 2015, as Part of STAF 2015, the federation of a number of the leading conferences on software technologies. The 16 revised papers were carefully selected from 34 submissions. The papers are organized in topical sections on change management; reuse and industrial applications; new paradigms for model transformation; transformation validation and verification; and foundations of model transformation.

Monthly Catalogue, United States Public Documents CRC Press

This is the third edition of the Index of Crystallographic Supplies prepared on behalf of the International Union of Crystallography by its Commission on Crystallographic Apparatus. The first was compiled by Professor A. Guinier in 1956 and the second under the editorship of Dr. A. J. Rose in 1959. At that time, it was intended that publication of revised editions of the Index should be a continuing project of succeeding Commissions. However, with

changing membership and other pressing activities, the preparation of the third edition has been dependent on the acquisition of a Commission member with appropriate experience and enthusiasm. The Commission is therefore fortunate that Professor R. Rudman, who has had considerable experience in the collation of information on crystallographic matters, has undertaken this task. He has been assisted by the advice of the members of the 1969-72 Commission, in particular that of a group which, during a meeting in Marseille, France, July 4-6, 1971 to discuss Commission affairs, went over the draft of the Index in close detail. These included S. C. Abrahams, U. W. Arndt and D. M. Kheiker. The information included in the Index was gathered from replies to a questionnaire which was sent to a wide range of manufacturers and suppliers throughout the world. It is not intended as complete and exhaustive but it should provide a convenient starting point for the location of the appropriate sources of equipment and materials of use to crystallographers.

For different groups of uses, such as health physicists, crystallographers, etc. The authors attempt to make each topic intelligible to the non-specialist in that topic.

1963: July-December Springer

These proceedings of the World Congress 2006, the fourteenth conference in this series, offer a strong scientific program covering a wide range of issues and challenges which are currently present in Medical physics and Biomedical Engineering. About 2,500 peer reviewed contributions are

presented in a six volume book, comprising 25 tracks, joint conferences and symposia, and including invited contributions from well known researchers in this field.

X-Ray Equipment Maintenance and Repairs Workbook for Radiographers and Radiological Technologists World Health Organization

World Congress of Medical Physics and Biomedical Engineering 2006 Pitman Publishing

The X-ray equipment maintenance and repairs workbook is intended to help and guide staff working with, and responsible for, radiographic equipment and installations in remote institutions where the necessary technical support is not available, to perform routine maintenance and minor repairs of equipment to avoid break downs. The book can be used for self study and as a checklist for routine maintenance procedures.

Quality Assurance in Diagnostic Radiology

Containing chapter contributions from over 130 experts, this unique publication is the first handbook dedicated to the physics and technology of X-ray imaging, offering extensive coverage of the field. This highly comprehensive work is edited by one of the world's leading experts in X-ray imaging physics and technology and has been created with guidance from a Scientific Board containing respected and renowned scientists from around the world. The book's scope includes 2D and 3D X-ray imaging techniques from soft-X-ray to megavoltage energies, including computed tomography,

fluoroscopy, dental imaging and small animal imaging, with several chapters dedicated to breast imaging techniques. 2D and 3D industrial imaging is incorporated, including imaging of artworks. Specific attention is dedicated to techniques of phase contrast X-ray imaging. The approach undertaken is one that illustrates the theory as well as the techniques and the devices routinely used in the various fields. Computational aspects are fully covered, including 3D reconstruction algorithms, hard/software phantoms, and computer-aided diagnosis. Theories of image quality are fully illustrated. Historical, radioprotection, radiation dosimetry, quality assurance and educational aspects are also covered. This handbook will be suitable for a very broad audience, including graduate students in medical physics and biomedical engineering; medical physics residents; radiographers; physicists and engineers in the field of imaging and non-destructive industrial testing using X-rays; and scientists interested in understanding and using X-ray imaging techniques. The handbook's editor, Dr. Paolo Russo, has over 30 years' experience in the academic teaching of medical physics and X-ray imaging research. He has authored several book chapters in the field of X-ray imaging, is Editor-in-Chief of an international scientific journal in medical physics, and has responsibilities in the publication committees of international scientific organizations in medical physics. Features: Comprehensive coverage of the use of X-rays both in medical radiology and industrial testing The first handbook published to be dedicated to the physics and technology of X-rays Handbook edited by world authority, with contributions from experts in each field
