JORDYN CONOR

Digital Literacy: Tools and Methodologies for Information Society Indiana University Press
 Messages, Signs, and Meanings can be used directly in introductory courses in semiotics, communications, media, or culture studies. Additionally, it can be used as a complementary or supplementary text in courses dealing with cognate areas of investigation (psychology, mythology, education, literary studies, anthropology, linguistics). The text builds upon what readers already know intuitively about signs, and then leads them to think critically about the world in which they live - a world saturated with images of all kinds that a basic knowledge of semiotics can help filter and deconstruct. The text also provides opportunities for readers to do "hands-on" semiotics through the exercises and questions for discussion that accompany each chapter. Biographical sketches of the major figures in the field are also included, as is a convenient glossary of technical terms. The overall plan of the book is to illustrate how message-making and meaning-making can be studied from the specific vantage point of the discipline of semiotics. This third edition also includes updated discussions of information technology throughout, focusing especially on how meanings are now negotiated through such channels as websites, chat rooms, and instant messages.

Messages, Signs, and Meanings Walter de Gruyter

Open publication This unique volume offers an overview of the diversity in research on communication: including perspectives from biology, sociality, economics, norms and human development. It includes general social science and humanities approaches to communication, from systems theory to cultural theory, as well as perspectives more specifically related to communication acts, such as linguistics and cognition. The volume also features chapters on the participants and various elements in communication processes, on possible effects and on wider consequences of mediation [with technical media]. The scope of the contributions is global, and the volume is relevant to both the empirical and the philosophical traditions in human sciences. Designed as a stand-alone collection to engage undergraduates as well as postgraduates and academics, this is also the first book in, and an introduction to, the de Gruyter Mouton multi-volume Handbooks of Communication Science.

Families and Food in Hard Times BRILL

The book provides an introduction to an interdisciplinary field of inquiry that can be called "global linguistics" (GL). GL emerges to tackle the ever-growing phenomenon of intercultural communication (IC) in today's world of international contacts. The specific aim of GL is to look at the form and contents of dialogues among speakers of different cultural backgrounds who will use a "default language" or koiné (usually English) to interact, in order to detect communication breakdowns at various levels of "depth", as well as the opportunities for developing sound intercultural communication practice. The book includes an accessible presentation of fundamental questions concerning languages and language use. Among the questions addressed are the universal design features of languages, the connection between language and conceptual systems, how people use language to coordinate their actions and interact in a variety of social contexts, and the place of language in a semiotic view of culture. The volume also addresses how language, context and culture shape the way in which we argue a point and try to persuade other people, and why intercultural argumentation is both necessary and risky. --Publisher description.

Semiotics in Mathematics Education IGI Global

This edited volume explores the role of (postcolonial) translation studies in addressing issues of the postcolony. It investigates the retention of the notion of postcolonial translation studies and whether one could reconsider or adapt the assumptions and methodologies of postcolonial translation studies to a new understanding of the postcolony to question the impact of postcolonial translation studies in Africa to address pertinent issues. The book also places the postcolony in historical perspective,

and takes a critical look at the failures of postcolonial approaches to translation studies. The book brings together 12 chapters, which are divided into three sections: namely, Africa, the Global South, and the Global North. As such, the volume is able to consider the postcolony (and even conceptualisations beyond the postcolony) in a variety of settings worldwide.

The Invasion from Mars University of Michigan Press

This book is open access under a CC BY 4.0 license "Francesca Billiani and Laura Pennacchietti draw brilliantly and with precision the evolution of the new architecture and of the national novel (with insights on translations of international novels), whose profiles had been shaped from different angles, especially in the 1930s. These two fields, apparently so distant one from the other, had never been analysed in parallel. This book does this and uncovers several points of contact between the two, spanning propaganda and theoretical turning points." —Chiara Costa and Cornelia Mattiacci, Fondazione Prada, Italy "This book shows convincingly how the arte di Stato during Fascism was created with the morality of a new novel as well as architecture. It is surprising to read how one of the representatives of State art, Giuseppe Bottai, is also one of the finest critics of realist novels and rationalist architecture. More than parallel endeavours, the system of the arts during the Fascist regime should be viewed as a series of intersections of cultural, political and aesthetic discourses." —Monica Jansen, Utrecht University, The Netherlands Architecture and the Novel under the Italian Fascist Regime discusses the relationship between the novel and architecture during the Fascist period in Italy (1922-1943). By looking at two profoundly diverse aesthetic phenomena within the context of the creation of a Fascist State art, Billiani and Pennacchietti argue that an effort of construction, or reconstruction, was the main driving force behind both projects: the advocated "revolution" of the novel form (realism) and that of architecture (rationalism). The book is divided into seven chapters, which in turn analyze the interconnections between the novel and architecture in theory and in practice. The first six chapters cover debates on State art, on the novel and on architecture, as well as their historical development and their unfolding in key journals of the period. The last chapter offers a detailed analysis of some important novels and buildings, which have in practice realized some of the key principles articulated in the theoretical disputes. Francesca Billiani is Senior Lecturer in Italian Studies and Director of the Centre for Interdisciplinary Research in the Arts and Languages at the University of Manchester, UK. Laura Pennacchietti is Research Associate in Italian Studies at the University of Manchester, UK.

Modeling Systems Theory and Semiotic Analysis University Press of Amer

This book offers both a naturalistic and critical theory of signs, minds, and meaning-in-the-world. It provides a reconstructive rather than deconstructive theory of the individual, one which both analytically separates and theoretically synthesizes a range of faculties that are often confused and conflated: agency (understood as a causal capacity), subjectivity (understood as a representational capacity), selfhood (understood as a reflexive capacity), and personhood (understood as a sociopolitical capacity attendant on being an agent, subject, or self). It argues that these faculties are best understood from a semiotic stance that supersedes the usual intentional stance. And, in so doing, it offers a pragmatism-grounded approach to meaning and mediation that is general enough to account for processes that are as embodied and embedded as they are articulated and enminded. In particular, while this theory is focused on human-specific modes of meaning, it also offers a general theory of meaning, such that the agents, subjects and selves in question need not always, or even usually, map onto persons. And while this theory foregrounds agents, persons, subjects and selves, it does this by theorizing processes that often remain in the background of such (often erroneously) individuated figures: ontologies (akin to culture, but generalized across agentive collectivities), interaction (not only between people, but also between people and things, and anything outside or in-between), and infrastructure (akin to context, but generalized to include mediation at any degree of remove).

Evil in Africa Walter de Gruyter

William C. Olsen, Walter E. A. van Beek, and the contributors to this volume seek to understand how Africans have confronted evil around them. Grouped around notions of evil as a cognitive or experiential problem, evil as malevolent process, and evil as an inversion of justice, these essays investigate what can be accepted and what must be condemned in order to evaluate being and morality in African cultural and social contexts. These studies of evil entanglements take local and national histories and identities into account, including state politics and civil war, religious practices, Islam, gender, and modernity.

The Comedy of War BRILL

'Ethnolinguistics' is the study of how language relates to culture and ethnicity. This book offers an original approach to ethnolinguistics, discussing how abstract concepts such as truth, love, hate and war are expressed across cultures and ethnicities. James W. Underhill seeks to situate these key cultural concepts within four languages (English, French, Czech and German). Not only do these concepts differ from language to language, but they go on changing over time. The book explores issues such as how far meaning is politically and culturally influenced, how far language shapes the thought of ethnic groups and how far their thought shapes language, and the role of individuals in the consolidation of cultural concepts. It offers a clear and thought-provoking account of how concepts are understood and will be welcomed by those working in the fields of sociolinguistics, linguistic anthropology, discourse analysis, semantics and pragmatics.

Nation Branding Springer Nature

This volume provides an innovative and detailed overview of the book publishing industry, including details about the business processes in editorial, marketing and production. The work explores the complex issues that occur everyday in the publishing in

The Book Publishing Industry Ballantine Books

This volume discusses semiotics in mathematics education as an activity with a formal sign system, in which each sign represents something else. Theories presented by Saussure, Peirce, Vygotsky and other writers on semiotics are summarized in their relevance to the teaching and learning of mathematics. The significance of signs for mathematics education lies in their ubiquitous use in every branch of mathematics. Such use involves seeing the general in the particular, a process that is not always clear to learners. Therefore, in several traditional frameworks, semiotics has the potential to serve as a powerful conceptual lens in investigating diverse topics in mathematics education research. Topics that are implicated include (but are not limited to): the birth of signs; embodiment, gestures and artifacts; segmentation and communicative fields; cultural mediation; social semiotics; linguistic theories; chains of signification; semiotic bundles; relationships among various sign systems; intersubjectivity; diagrammatic and inferential reasoning; and semiotics as the focus of innovative learning and teaching materials.

The Interpenetration of Mythology and Science Walter de Gruyter

The Comedy of War is an overview of military politics, strategy, and the causes of war utilizing books and films as source texts: The Art of War by Sun Tzu, on War by Prussian General Carl von Clausewitz, and The Butter Battle by Dr. Seuss; (the films) Antz and A Bug's Life. This work offers systematic interpretations of what goes on before and after war, and the political and strategic implications of warfare. It provides interesting and plausible explanations for the contentious relationship of military officers and civilian leaders, ultimately questioning what happens when the definitions of military and civilian activities become blurred.

An Introduction Contemporary Austrian Studies

This volume addresses the intellectual and political contexts that produced Cassius Dio's (c. 160-c. 230 CE) massive and indispensable synthesis of Roman history. Contributors examine the literary influences, cultural identity and political ideologies of this much read but enigmatic author.

Springer

Food is fundamental to health and social participation, yet food poverty has increased in the global North. Adopting a realist ontology and taking a comparative case approach, Families and Food in Hard Times addresses the global problem of economic retrenchment and how those most affected are those with the least resources. Based on research carried out with low-income families with children aged 11-15, this timely book examines food poverty in the UK, Portugal and Norway in the decade following the 2008 financial crisis. It examines the resources to which families have access in relation to public policies, local institutions and kinship and friendship networks, and how they intersect. Through 'thick description' of families' everyday lives, it explores the ways in which low income impacts upon practices of household food provisioning, the types of formal and informal support on which families draw to get by, the provision and role of school meals in children's lives, and the constraints upon families' social participation involving food. Providing extensive and intensive knowledge concerning the conditions and experiences of low-income parents as they endeavour to feed their families, as well as children's perspectives of food and eating in the context of low income, the book also draws on the European social science literature on food and families to shed light on the causes and consequences of food poverty in austerity Europe.

A Cultural Awakening JHU Press

To this day, no comprehensive academic study of the development of guidebooks to Rome over time

has been performed. This book treats the history of guidebooks to Rome from the Middle Ages up to the early twentieth century. It is based on the results of the interdisciplinary research project Topos and Topography, led by Anna Blenow and Stefano Fogelberg Rota. From the case studies performed within the project, it becomes evident that the guidebook as a phenomenon was formed in Rome during the later Middle Ages and early Renaissance. The elements and rhetorical strategies of guidebooks over time have shown to be surprisingly uniform, with three important points of development: a turn towards a more user-friendly structure from the seventeenth century and onward; the so-called 'Baedeker effect' in the mid-nineteenth century; and the introduction of a personalized guiding voice in the first half of the twentieth century. Thus, the 'guidebook tradition' is an unusually consistent literary oeuvre, which also forms a warranty for the authority of every new guidebook. In this respect, the guidebook tradition is intimately associated with the city of Rome, with which it shares a constantly renovating yet eternally fixed nature.

A Basic Textbook in Semiotics and Communication Cambridge Scholars Publishing

Revolutionary Paris and the Market for Netherlandish Art restores attention to the aesthetic, intellectual, and economic link between two key periods in the history of art: the "Golden Age" of Dutch and Flemish painting and that of the French Revolution.

Rome and The Guidebook Tradition Maternal Megalomania Julia Domna and the Imperial Politics of Motherhood

Wall Street scandals. Fights over taxes. Racial resentments. A Lakers-Celtics championship. The Karate Kid topping the box-office charts. Bon Jovi touring the country. These words could describe our current moment—or the vaunted iconography of three decades past. In this wide-ranging and wickedly entertaining book, New York Times bestselling journalist David Sirota takes readers on a rollicking DeLorean ride back in time to reveal how so many of our present-day conflicts are rooted in the larger-than-life pop culture of the 1980s—from the "Greed is good" ethos of Gordon Gekko (and Bernie Madoff) to the "Make my day" foreign policy of Ronald Reagan (and George W. Bush) to the "transcendence" of Cliff Huxtable (and Barack Obama). Today's mindless militarism and hypernarcissism, Sirota argues, first became the norm when an '80s generation weaned on Rambo one-liners and "Just Do It" exhortations embraced a new religion—with comic books, cartoons, sneaker commercials, videogames, and even children's toys serving as the key instruments of cultural indoctrination. Meanwhile, in productions such as Back to the Future, Family Ties, and The Big Chill, a campaign was launched to reimagine the 1950s as America's lost golden age and vilify the 1960s as the source of all our troubles. That 1980s revisionism, Sirota shows, still rages today, with Barack Obama cast as the 60s hippie being assailed by Alex P. Keaton-esque Republicans who long for a return to Eisenhower-era conservatism. "The past is never dead," William Faulkner wrote. "It's not even past." The 1980s—even more so. With the native dexterity only a child of the Atari Age could possess, David Sirota twists and turns this multicolored Rubik's Cube of a decade, exposing it as a warning for our own troubled present—and possible future.

Non-prototypical Clefs in French University of Chicago Press

Nation Branding: Concepts, Issues, Practice was the ground-breaking first textbook to provide an overview of this recently established but fast-growing practice, in which the principles of brand management are applied to countries rather than companies. Many governments have invested in nation branding in order to strengthen their country's influence, improve its reputation, or boost tourism, trade and investment. This new edition has been comprehensively revised and its influential original framework modified to reflect the very latest changes to this still-developing field. It remains an accessible blend of theory and practice rich with international examples and contributions. Updates to this edition: New international cases of countries as diverse as China, United Arab Emirates, Ghana, Cuba, India, Great Britain and many more; New contributions from distinguished scholars, diplomats and businesspeople providing a range of case studies, practitioner insights and academic perspectives; New Companion Website to support the book featuring instructor aids such as PowerPoint presentations for each chapter and an instructor manual; This much-anticipated update to an influential book is an essential introduction to nation branding for students and policy makers.

Back to Our Future Simon and Schuster

Semiotics has had a profound impact on our comprehension of a wide range of phenomena, from how animals signify and communicate, to how people read TV commercials. This series features books on semiotic theory and applications of that theory to understanding media, language, and related subjects. The series publishes scholarly monographs of wide appeal to students and interested non-specialists as well as scholars. AAS is a peer-reviewed series of international scope.
