SDRAM Controller For Low-end FPGAs | Hackaday
 Fpga Vhdl Sdram Controller Code
 While this is fine for a modern computer, a memory controller like that is very complicated for someone simply trying to use an SDRAM with their simpler FPGA project. Since SDRAM is cheap (\$3.50 for 32MB at the time of writing) most FPGA development boards come with some sort of SDRAM instead of more expensive (but faster and much easier to use) SRAM.
 FPGA VHDL SDRAM Controller « [Code | Hack | Create]
 On the right, the controller drives the SDRAM signals. To put things in perspective, here's a view of a typical FPGA system using our SDRAM controller. Now our controller makes the SDRAM appear as a dual-port memory. But an SDRAM is really a single-port memory, so our controller has to play a trick.
 fpga4fun.com - SDRAM 2 - A simple controller
 Even though the SDRAM chip only has a 16-bit data bus, the controller uses a 32-bit data bus because it is more efficient to burst multiple words from the SDRAM than it is to do individual reads and writes.
 State Diagram. Licence. This project is licensed under the MIT licence. See the LICENCE file for more details.

 Anybody here Developing own VHDL code (not using MIG) for DDR SDRAM controller for Virtex-6 FPGA? If Yes, can u please guide me how to go about it? Because i am developing code for DDR SDRAM controller which operates at 167 MHz, which is not working properly. So, i require the guidelines.
 Regards

 I have to develop a SDRAM controller for a class project in VHDL. But this is my first time working with VHDL, that has a very important learning curve. I have downloaded a SDRAM controller from g...
 ram - SDRAM Controller in VHDL - Stack Overflow
 Building a SDRAM Controller (VHDL) I am using the Spartan SP601 Evaluation Board, which includes 1 GB Elpida EDE1116ACBG-8E-E SDRAM. I would like to build a RAM controller, but have no experience in working with RAM before. I largely based my design on a RAM controller in a textbook for Spartan-3 devices.
 ram - Building a SDRAM Controller (VHDL) - Electrical ...
 DDR and DDR2 SDRAM Controller Intel® FPGA IP
 Core Overview
 The DDR and DDR2 SDRAM controllers handle the complex aspects of using DDR and DDR2 SDRAM—initializing the memory devices, managing SDRAM banks, and keeping the devices refreshed at appropriate intervals.
 DDR and DDR2 SDRAM Controller Intel® FPGA IP
 This is using a papilio pro, which is a bit less than \$90, including a spartan LX9 and a 64 Mbit SDRAM and a usb interface chip. As far as fpga development boards go, \$90 is low end. \$11 for a Spartan 6 in TQFP144 sounds fairly low-end. That's hardly a complete setup.
 SDRAM Controller For Low-end FPGAs | Hackaday
 SDRAM controller. Although modern FPGAs contain internal memories, the amount of memory available is always orders of magnitude below what is possible with dedicated memory chips. So it is not surprising that many FPGA designers attach some type of memory to their FPGA. In particular, SDRAMs are very popular memories due to their high speed...
 fpga4fun.com - SDRAM controller
 Just as a little background: Every DDR3 memory transfer is 128 bits long. Sure, the memory supports a 64 bit transfer mode, but that transfer mode still takes as many clocks as the 128-bit transfers, so you don't get any advantage there. (This assumes a 16-bit bus transfer width, such as the Arty has.)
 Simple code for DDR3 SDRAM - FPGA - Digilent Forum
 Can any1 plzz help me writing a vhd/verilog code for interfacing DDR3 SDRAM to vertex6 FPGA or spartan6 FPGA.... Thank you. Advertisement 27th March 2012 , 03:21 #2. jimwu88 ... which generates Verilog or VHDL code for DDR3 memory controller. Originally Posted by dmx-512.  vhd/verilog code for interfacing DDR3 SDRAM to vertex6

Then download the verilog/VHDL design of the SDRAM and check with a simple testbench the correctness. (or try to find a "good" SDRAM-controller, a good starting point are the classic computing designs like MiniMIG, AtariST etc., almost all 16Bit Computer Designs uses SDRAMs)
 SDRAM Memory Controller for Terasic DE0-nano - EmbDev.net
 Hi Does anybody around here has complete working code for sdram controller in verilog which is in synthesizable. the code which i have is ok but gives the problem when applied the constraints in VirtexII FPGA. thanks
 Ashish
 Looking for SDRAM Controller Verilog code
 SDRAM Memory Controller. CURRENT STATUS : stable. This is a very a simple sdram controller which works on the De0 Nano. The project also contains a simple push button interface for testing on the dev board. Basic features. Operates at 100Mhz, CAS 3, 32MB, 16-bit data; On reset will go into INIT sequece
 GitHub - stffrdhrn/sdram-controller: Verilog SDRAM memory ...
 question about SDRAM controllers
 My MAX10 dev-kit has an SDRAM chip on-board. The SDRAM's datasheet says that it can work with a clock frequency of 200, 143, or 166 MHz, However as far as I can tell from my dev-kit's manual and schematics The board only produces 24MHz and 50MHz clocks.
