Introduction to Global Health Promotion addresses a breadth and depth of public health topics that students and emerging professionals in the field must understand as the world's burden of disease changes with non-communicable diseases on the rise in low- and middle-income countries as their middle class populations grow. Now more than ever, we need to provide health advocacy and intervention to prevent, predict, and address emerging global health issues. This new text from the Society for Public Health Education (SOPHE) prepares readers with thorough and thoughtful chapters on global health promotion theories, best practices, and perspectives on the future of the field, from the individual to the global level. The world's biggest health care challenges—including HIV, malaria, heart disease, smoking, and violence, among others—are explored in detail in Introduction to Global Health Promotion. The state of the science, including the latest empirical data, is distilled into 19 chapters that update readers on the complex issues surrounding a variety of illnesses and conditions, and disease epidemics and individual, social, institutional, and governmental barriers to preventing them. Expert authors bring to the fore human rights issues, new uses of technology, and practical application of theory. Gesundheitspolitik ist heute sowohl in Deutschland als auch in Großbritannien ein höchst kontrovers diskutiertes Thema. Viele Probleme, mit denen die Politik heute kämpft, haben ihre Wurzeln in der Nachkriegszeit, in der beide Systeme entscheidend geprägt wurden. Ulrike Lindner legt erstmals eine historische komparative Studie zur deutsch-britischen Gesundheitspolitik der Nachkriegszeit vor. Sie stellt dabei besonders die Ebene der Umsetzung von gesundheitspolitischen Maßnahmen in den Vordergrund. Vier Themenbereiche sind die Basis für den Vergleich: Tuberkulose, Kinderlähmung, Geschlechtskrankheiten und die Vorsorge für Schwangere und Säuglinge als wichtige gesundheitspolitische Problemfelder des Untersuchungszeitraums. Die Analyse der Implementierung von Gesundheitspolitik ermöglicht es, sowohl strukturelle Prägungen als auch den Einfluss gesellschaftlicher Traditionen in beiden Ländern präzise herauszuarbeiten.

Today Health is an important aspect of human being. Health of the individual is closely related to the various geographical factors. Geographical factors are more influencing and they determine the health of individual and the community. Health is considered as a major determinant of happiness. The link between health and development is very close. Health can be considered as a factor of development. In the two decades preceding, the start of the new millennium, geography as a

discipline witnessed an innovative revolution that completely reorganized the traditional boundaries of this field. Building upon its established strengths and embracing the novel ideas and perspectives brought about by the technological boom of the late 1980s, geography has expanded into a more robust, recognized, marketable, unified and diversified scientific discipline (Gaile & Willmott, 2003).
