Many building contract claims are ill-founded, often because the basic principles are misunderstood. This

highly regarded book examines the legal basis of claims for additional payment, and what can and cannot be claimed under the main forms of contract.

It includes chapters dealing with direct loss and expense, liquidated damages, extension of time, concurrency, acceleration, time at large, common law and contractual claims, global claims, heads of claim and their substantiation.

The new fourth edition has been substantially restructured and updated. Nearly 100 additional cases have been added as well as four new contracts: the JCT Construction Management and Major Project contracts, the JCT Standard Form of Domestic Subcontract, and the Engineering and Construction Contract (the NEC Form).

The book continues to use the JCT Standard Form (JCT 98) as the basis of the text, with important differences highlighted in the other forms. Seventeen forms are dealt with and they have all been updated since the last edition of this book.

This new edition is essential reading for architects, contract administrators,

project managers and quantity surveyors. It will also be invaluable to contractors, contracts consultants and construction lawyers.

David Chappell BA (Hons Arch), MA (Arch), MA (Law), PhD, RIBA has 45 years' experience in the construction industry, having worked as an architect in public and private sectors, as contracts administrator for a building contractor, as a lecturer in construction law and contract procedures and for the last fifteen years as a construction contract consultant.

He is currently the Director of David Chappell Consultancy Limited and frequently acts as an adjudicator. He is Senior Research Fellow and Professor in Architectural Practice and Management Research at the Queen's University, Belfast. He was appointed Visiting Professor in Practice Management and Law at the University of Central England in Birmingham from 1 March 2003. David Chappell is the author of many articles and books for the construction industry. He is one of the RIBA Specialist Advisors and lectures widely. Vincent Powell-

Designed to introduce students to quantitative

methods in a way that can be applied to all kinds of data in all kinds of situations, *Statistics and Data Visualization Using R: The Art and Practice of Data Analysis* by David S. Brown teaches students statistics through charts, graphs, and displays of data that help students develop intuition around statistics as well as data visualization skills. By focusing on the visual nature of statistics instead of mathematical proofs and derivations, students can see the relationships between variables that are the foundation of quantitative analysis. Using the latest tools in R and RStudio® for calculations and data visualization, students learn valuable skills they can take with them into a variety of future careers in the public sector, the private sector, or academia. Starting at the most basic introduction to data and going through most crucial statistical methods, this introductory textbook quickly gets students new to statistics up to speed running analyses and interpreting data from social science research.

Asian cities are particularly vulnerable to risks associated with natural disasters. While they are exposed to various types of natural hazards, flooding and other water-related disasters pose particularly significant risks and undermine long-term economic growth, especially in coastal cities. Managing such natural disaster risks is an essential component of urban policies in fast-growing Southeast Asian cities, especially as the impacts of climate change worsen. In addition to providing a framework for assessing disaster risk management policies in cities, this report also presents the results of assessment and locally tailored policy

recommendations in five cities of different institutional, geographic, socio-economic and environmental contexts in Southeast Asia. They include Bandung (Indonesia), Bangkok (Thailand), Cebu (Philippines), Hai Phong (Viet Nam) and Iskandar (Malaysia). The study highlights that Southeast Asian cities are largely underprepared for natural disaster risks. Through an assessment of disaster risk management (DRM) policies at national and subnational levels, the study aims to enhance urban resilience by: i) identifying policy challenges related to DRM ; ii) assessing the impacts of current DRM policy practices; and iii) proposing more efficient and effective policy options to enhance urban resilience.

Dalam sesuatu projek pembinaan, semua pihak yang terlibat mengharapkan pelaksanaan yang sempurna. Namun begitu, terdapat juga kemungkinan kesempurnaan seperti yang diharapkan tidak berlaku. Dengan itu,

diwujudkan bon pelaksanaan sebagai instrumen pengurusan risiko, yang bertindak sebagai penjamin kepada pelaksanaan sesuatu projek pembinaan. Walau bagaimanapun, bon pelaksanaan mempunyai risikonya yang tersendiri. Oleh itu, aspek pengurusan dan undang-undang dalam mengendalikan bon pelaksanaan itu perlulah difahami sebaik-baiknya. Buku ini mengetengahkan konsep, skop dan kaedah penggunaan sebenar bon pelaksanaan. Turut dibincangkan praktis semasa bon bertulis, penandatanganan, penyeteman, nilai jaminan bon, tempoh berkuat kuasa dan kategori bon pelaksanaan. Mekanisme indemniti, hak penjamin bon dan kaedah tuntutan bon juga turut dibincangkan. Buku ini sesuai untuk semua yang terlibat dalam projek pembinaan, ahli akademik serta pelajar bidang berkaitan.

*Reference Guide on Standard Prefabricated Building Components* John Wiley & Sons  
 This topical and timely book presents and innovative approach to dealing with the complexities of cost planning in PFI. PFI/PPP projects have a significantly different costing environment from conventionally procured projects, requiring cost analysts to use their expertise and innovative thinking to develop whole-life cost solutions that deliver value for money to the client, thus improving public building assets performance. Abdelhalim Boussabaine provides a thorough grounding in the theory of PFI, from its early evolution through to examples of current projects. In particular, the rationale for private financing of public services, arguments for and against PFI and 'value for money' mechanisms are discussed. The book presents an innovative framework for whole-life value and calls for changes in the way whole life cycle value is perceived, created and exchanged. *Cost Planning of PFI and PPP Building Projects* provides the reader with existing

knowledge as well as present innovative thinking for future development and management of PFI/PPP cost planning processes. Given the importance and novelty of this book, academics, professionals, undergraduate and postgraduate students will find this book valuable.

 Project management is of critical importance in construction, yet its execution poses major challenges. In order to keep a project on track, decisions often have to be made before all the necessary information is available. Drawing on a wide range of research, *Managing Construction Projects* proposes new ways of thinking about project management in construction, exploring the skills required to manage uncertainty and

offering techniques for thinking about the challenges involved. The second edition takes the information processing perspective introduced in the first edition and develops it further. In particular, this approach deepens the reader's understanding of the dynamics in the construction project process- from the value proposition inherent in the project mission, to the functioning asset that generates value for its owners and users.  
*Managing Construction Projects* is a unique and indispensable contribution to the available literature on construction project management. It will be of particular benefit to advanced students of construction and construction project management, as well as contractors and quantity surveyors.  
 Reviews of the First edition: "A massive review of the art and science of the management of projects that has the great virtue of being a good read wherever it is touched. It spills the dirt on things that went wrong, elucidates the history so you can understand the industry's current stance, draws on

other countries experience and explains the latest management processes. Throughout it is liberally sprinkled with anecdotes and case histories which amply illustrate the dos and don'ts for practitioners wishing to deliver projects on time to expected quality and price. A valuable book for students and practitioners alike." —John D Findlay, Director, Stent "This is a valuable source for practitioners and students. It covers the A-Z of project management in a confident contemporary manner, and provides a powerful and much needed

conceptual perspective in place of a purely prescriptive approach. The engaging presentation introduces a range of challenges to established thinking about project management, often by making comparisons between practices in the UK and those of other countries." —Peter Lansley, Professor of Construction Management, University of Reading "A refreshing and unique study of information management and its impact upon international construction project management.... The book is well presented

and written, logical and succinct and is flexible enough to allow readers to either read from start to finish or to dip into selected chapters. This book deserves to be an established text for any construction or civil engineering under- and/or postgraduate course." —CNBR, 25th November 2003 "Generous use is made of anecdotes and case histories throughout to support the theory. the book illustrates the mistakes made by others, and the means to deliver projects on time and to cost." —Building Services Journal, April 2004
