Christmas Eve, 1957: An RAF pilot needs a miracle to make it home as his fighter jet begins to fail, in a story by the #1 New York Times–bestselling author. It is Christmas Eve, 1957, and there are cozier places to be than the cockpit of a de Havilland Vampire fighter plane. But for the Royal Air Force pilot who has just taken off from West Germany, this single-seat jet is the only way to make it back to England for Christmas morning. His flight plan is simple; the fuel tank is full. In sixty-six minutes, he will be back in Blighty. But then the plane begins to fail. First the compass goes haywire, then the radio dies. Lost and alone above the English coast, the pilot is searching for a landing strip when the fog closes in, signaling certain death. He has given up hope when a second shadow appears—a Mosquito fighter-bomber of World War II vintage. The plane is a “shepherd,” guiding the Vampire to a safe landing, and its appearance is a gift from fate, a miracle out of time—but for one lonely pilot, the mystery has just begun. A classic bestseller, beloved by aviation fans (including actor John Travolta, who calls it “one of my favorites because it personalizes the two planes”) and

general readers alike, The Shepherd is a gripping, heartwarming tale for a cold winter’s night.

Ten Strategies of a World-Class Cyber Security Operations Center conveys MITRE's accumulated expertise on enterprise-grade computer network defense. It covers ten key qualities of leading Cyber Security Operations Centers (CSOCs), ranging from their structure and organization, to processes that best enable smooth operations, to approaches that extract maximum value from key CSOC technology investments. This book offers perspective and context for key decision points in structuring a CSOC, such as what capabilities to offer, how to architect large-scale data collection and analysis, and how to prepare the CSOC team for agile, threat-based response. If you manage, work in, or are standing up a CSOC, this book is for you. It is also available on MITRE's website, www.mitre.org.

The Columbian Orator, an instruction book on public speaking and a collection of political dialogues, essays, and speeches, was first published in 1797. It was used as a textbook in many classrooms in the United States and became the influence for abolitionist Frederick Douglass. Its popularity continued into the 20th century for its demonstration of the power of speech and its importance to the human rights movement. CALEB BINGHAM (1757-1817) was a textbook author, publisher, and bookseller in Boston, Massachusetts. Born in Salisbury, Connecticut, he was educated and taught at Dartmouth College. His most famous works were on public speaking, including the well-known The Columbian Orator. Other textbooks Bingham wrote on grammar and speech include The American Preceptor and The Young Lady's Accidence.

Increasing interest has been emerging in the last decade in the field of signal recognition and transduction. This is particularly true for animal systems where an impressive amount of literature is appearing and where many important pathways have been clarified at a molecular level. In the elucidation of the functions of single components of a given pathway, gene cloning has played a major role and opened the field to the genetic engineering of these complex systems. At variance with this situation, plant systems are less well elucidated, even if in recent years exciting research of developments have been initiated especially with the view toward the most promising role plants in biotechnology. Recent studies have elucidated some of the events involved in the perception of the plant hormone signals and some steps concerning its transduction. Only for three of the five hormones in plants, namely auxin, ethylene and cytokinins, have specific receptors been isolated. The use of classical molecular approaches, together with the more recently isolated mutants, have produced crucial information on receptors and shed light on possible transduction pathways. As in the case of red light, more than one pathway can be triggered by one specific signal. Many systems involved in animal signaling are now shown to be present also in plants, and in view of the fast progress in this area, it will be possible in the near future to fully describe the content of the "black boxes" in the reaction chain specifically triggered by a signal.

A Christmas Carol in Prose, Being a Ghost Story of Christmas, usually known just as A Christmas Carol is a fairy-tale novel by a British classic Charles Dickens, that was published in 1843. It consists of five chapters, or staves as the author named them. Among all the stories from Christmas Books by Dickens this one became the most popular story about Christmas in Great Britain and outside the country. The main character is an old gloomy miser Ebenezer Scrooge, who doesn't love anyone or anything except his money. He doesn't understand why everybody is so happy about Christmas and with disgust, refuses the invitation from his kind nephew to celebrate this holiday together with his family. On Christmas Eve, the ghost of his former business partner Jacob Marley appeared in front of Scrooge, and it changed him drastically...

The life sciences deal with a vast array of problems at different spatial, temporal, and organizational scales. The mathematics necessary to describe, model, and analyze these problems is similarly diverse, incorporating quantitative techniques that are rarely taught in standard undergraduate courses. This textbook provides an accessible introduction to these critical mathematical concepts, linking them to biological observation and theory while also presenting the computational tools needed to address problems not readily investigated using mathematics alone. Proven in the classroom and requiring only a background in high school math, Mathematics for the Life Sciences doesn't just focus on calculus as do most other textbooks on the subject. It covers deterministic methods and those that incorporate uncertainty, problems in discrete and continuous time, probability, graphing and data analysis, matrix modeling, difference equations, differential equations, and much more. The book uses MATLAB throughout, explaining how to use it, write code, and connect models to data in examples chosen from across the life sciences. Provides undergraduate life science students with a succinct overview of major mathematical concepts that are essential for modern biology Covers all the major quantitative concepts that national reports have identified as the ideal components of an entry-level course for life science students Provides good background for the MCAT, which now includes data-based and statistical reasoning Explicitly links data and math modeling Includes end-of-chapter homework problems, end-of-unit student projects, and select answers to homework problems Uses MATLAB throughout, and MATLAB m-files with an R supplement are available online Prepares students to read with comprehension the growing quantitative literature across the life sciences A solutions manual for professors and an illustration package is available

Discovering That Genes Are Made of DNA BEYOND BOOKS HUB

****Winner of the Pulitzer Prize in History**** “Extraordinary...a great American biography” (The New Yorker) of the most important African-American of the nineteenth century: Frederick Douglass, the escaped slave who became the greatest orator of his day and one of the leading abolitionists and writers of the era. As a young man Frederick Douglass (1818-1895) escaped from slavery in Baltimore, Maryland. He was fortunate to have been taught to read by his slave owner mistress, and he would go on to become one of the major literary figures of his time. His very existence gave the lie to slave owners: with dignity and great intelligence he bore witness to the brutality of slavery. Initially mentored by William Lloyd Garrison, Douglass spoke widely, using his own story to condemn slavery. By the Civil War, Douglass had become the most famed and widely travelled orator in the nation. In his unique and eloquent voice, written and spoken, Douglass was a fierce critic of the United States as well as a radical patriot. After the war he sometimes argued politically with younger African Americans, but he never forsook either the Republican party or the cause of black civil and political rights. In this “cinematic and deeply engaging” (The New York Times Book Review) biography, David Blight has drawn on new information held in a private collection that few other historians have consulted, as well as recently discovered issues of Douglass's newspapers. “Absorbing and even moving...a brilliant book that speaks to our own time as well as Douglass's” (The Wall Street Journal), Blight's biography tells the fascinating story of Douglass's two marriages and his complex extended family. “David Blight has written the definitive biography of Frederick Douglass...a powerful portrait of one of the most important American voices of the nineteenth century” (The Boston Globe). In addition to the Pulitzer Prize, Frederick Douglass won the Bancroft, Parkman, Los Angeles Times (biography), Lincoln, Plutarch, and Christopher awards and was named one of the Best Books of 2018 by The New York Times Book Review, The Wall Street Journal, The Boston Globe, The Chicago Tribune, The San Francisco Chronicle, and Time.

Strengthening Forensic Science in the United States Preparing for the Biology AP Exam

Since its original landmark publication in 1980, *A People's History of the United States* has been chronicling American history from the bottom up, throwing out the official version of history taught in schools -- with its emphasis on great men in high places -- to focus on the street, the home, and the workplace. Known for its lively, clear prose as well as its scholarly research, *A People's History* is the only volume to tell America's story from the point of view of -- and in the words of -- America's women, factory workers, African-Americans, Native Americans, the working poor, and immigrant laborers. As historian Howard Zinn shows, many of our country's greatest battles -- the fights for a fair wage, an eight-hour workday, child-labor laws, health and safety standards, universal suffrage, women's rights, racial equality -- were carried out at the grassroots level, against bloody resistance. Covering Christopher Columbus's arrival through President Clinton's first term, *A People's History of the United States*, which was nominated for the American Book Award in 1981, features insightful analysis of the most important events in our history. Revised, updated, and featuring a new afterword by the author, this special twentieth anniversary edition continues Zinn's important contribution to a complete and balanced understanding of American history.

Narrative of the Life of Frederick Douglass First published in 1845, *Narrative of the Life of Frederick Douglass* is an eye-opening depiction of American slavery. Part autobiography, part human-rights treatise, it describes the everyday horrors inflicted on captive laborers, as well as the strength and courage needed to survive. *Narrative of the Life of Frederick Douglass* Born into slavery on a Maryland plantation in 1818, Frederick Douglass spent years secretly teaching himself to read and write—a crime for which he risked life and limb. After two failed escapes, Douglass finally, blessedly boarded a train in 1838 that would eventually lead him to New York City and freedom. *Narrative of the Life of Frederick Douglass* Few books have done more to change America's notion of African Americans than this seminal work. Beyond its historical and social relevancy, it is admired today for its gripping stories, the intensity of spirit, and heartfelt humanity. *Narrative of the Life of Frederick Douglass* This ebook has been professionally

proofread to ensure accuracy and readability on all devices. *Narrative of the Life of Frederick Douglass* Born into a life of bondage, Frederick Douglass secretly taught himself to read and write. It was a crime punishable by death, but it resulted in one of the most eloquent indictments of slavery ever recorded. His gripping narrative takes us into the fields, cabins, and manors of pre-Civil War plantations in the South and reveals the daily terrors he suffered. *Narrative of the Life of Frederick Douglass* Written more than a century and a half ago by a Black man who went on to become a famous orator, U.S. minister to Haiti, and leader of his people, this timeless classic still speaks directly to our age. It is a record of savagery and inhumanity that goes far to explain why America still suffers from the great injustices of the past. *Narrative of the Life of Frederick Douglass* Open Road Media

From the cofounder of a \$40 billion software company comes an invaluable guide packed with \$1 trillion worth of advice from some of the world's most successful and recognizable entrepreneurs. Over the past 20 years, first as an early employee at Salesforce and later as a cofounder of Okta (a publicly traded software company now valued at over \$40 billion), Frederic Kerrest has met the most successful entrepreneurs and investors in Silicon Valley and beyond. He's discussed every angle of entrepreneurship with them—what works, what doesn't, and what to do when things get rough—and he's taken notes. The result is this unmatched blueprint for building and growing a business, drawn from his own experience as well as that of his fellow visionaries and business leaders, who have collectively built over \$1 trillion worth of wealth for themselves and their investors. They include Marc Andreessen and Ben Horowitz (Andreessen Horowitz), Eric Yuan (Zoom), Stewart Butterfield (Slack), Aneel Bhusri (Workday), Julia Hartz (Eventbrite), Aaron Levie (Box), Fred Luddy (ServiceNow), Melanie Perkins (Canva), Patty McCord (Netflix), Sebastian Thrun (Udacity), and dozens of other luminaries. These ideas and practices aren't taught in business schools. They've been learned the hard way, through trial and error in the real world of business. Kerrest has battle-tested them himself, so he knows their power. Organized by topic in roughly the order that leaders will encounter them as they scale their businesses, this book is the ultimate guide to taking a company all the way from founding to IPO—and beyond.

This generously illustrated book tells the story of the human family, showing how our species' physical traits and behaviors evolved over millions of years as our ancestors adapted to dramatic environmental changes. In *What Does It Mean to Be Human?* Rick Potts, director of the Smithsonian's Human Origins Program, and Chris Sloan, National Geographic's paleoanthropology expert, delve into our distant past to explain when, why, and how we acquired the unique biological and cultural qualities that govern our most fundamental connections and interactions with other people and with the natural world. Drawing on the latest research, they conclude that we are the last survivors of a once-diverse family tree, and that our evolution was shaped by one of the most unstable eras in Earth's environmental history. The book presents a wealth of attractive new material especially developed for the Hall's displays, from life-like reconstructions of our ancestors sculpted by the acclaimed John Gurche to photographs from National Geographic and Smithsonian archives, along with informative graphics and illustrations. In coordination with the exhibit opening, the PBS program NOVA will present a related three-part television series, and the museum will launch a website expected to draw 40 million visitors.
