Medical students often struggle when presenting new patients to the attending physicians on the ward. Case presentation is either poorly taught or not taught at all in the first two years of medical school. As a result, students are thrust into the spotlight with only sketchy ideas about how to present, prioritize, edit, and focus their case presentations. They also struggle with producing a broad differential diagnosis and defending their leading diagnosis. This text provides a comprehensive guide to give well-prepared, focused and concise presentations. It also allows students to discuss differential diagnosis, incorporate high-value care, educate their colleagues, and participate actively in the care of their patients. Linking in-depth discussion of the oral presentation with differential diagnosis and high value care, Presenting Your Case is a valuable resource for medical students, clerkship directors and others who educate students on the wards and in the clinic.

**The Counseling Practicum and Internship Manual, Third Edition** Lippincott Williams & Wilkins 2017-2018 update. This little booklet has been fully revised this year. Two overlapped sections ("Additional things for admission order" and "floor orders") are finally combined. Some redundant sections are removed based on the feedback we received. More management sections (such as managing acute alcohol intoxication, sepsis, renal failure, etc) are added. New section on "Introduction to Cardiology Procedures" is added. All the sections are edited and at least one-third of the book has changed. The sole purpose of this booklet is to help new interns in the beginning of the year. It is mostly focused on inpatient medicine and ICU rotations - how to handle the most common floor calls, such as chest pain, uncontrolled HTN, vomiting and to help guide running RRT/ Code Blue. With advances in technology such as widespread use of electronic medical records, this booklet has been electronically formatted to meet the demands of dynamic medical system. We hope this booklet will make your intern year less stressful, so that you can focus on learning, the decision making process, and ultimately, better patient care.

"As an intern you will encounter many new challenges. These will range from very simple to most complex. Please remember that you have acquired the tools to address this adversity. And, even when you feel most overwhelmed, you are undoubtedly surrounded by a wealth of available resources that include ancillary and nursing staff, fellow interns, senior residents and attending physicians. Although the year ahead of you may now seem long and daunting, your tasks (other than survival) are quite achievable. The following competencies/milestones were copied from the curriculum for the in-patient general medicine rotation for the internship program at Washington University School of Medicine and Barnes-Jewish Hospital. You can see that not only are the objectives quite simple, but your rigorous work in medical school has well prepared you to master many of your goals. Throughout the year, use these objectives as a checklist to remind yourself of your accomplishments and to guide your learning in potential areas of weakness. - Patient care: o Gather accurate information about patients, including performing a thorough history and physical examination. o Synthesize data into a prioritized problem list and differential diagnosis, and then formulate diagnostic and therapeutic plans. o Prioritize each day's work. o Know the indications, contraindications, and risks of some invasive procedures and competently perform some invasive procedures"--Provided by publisher.

In 2005, *The Woman at the Washington Zoo* was published to major critical acclaim. The late Marjorie Williams possessed "a special voice, one capable not just of canny political observations but of tenderness and bracing intimacy," observed the *New York Times Book Review*. Now, in a collection of profiles with the richness of short fiction, Williams limns the personalities that dominated politics and the media during the final years of the twentieth century. In these pages, Clark Clifford grieves "in his laborious baritone" a bank scandal's blow to his re-pu-taaaaaay-shun. Lee Atwater likens himself to Ulysses and pleads, "tah me to the mast!" Patricia Duff sheds "precipitous tears" over her divorce from Ronald Perelman, resembling afterwards "a garden refreshed by spring rain." Reputation illuminates our recent past through expertly drawn portraits of powerful - and messily human - figures.

From one of America's most popular short story writers and an Academy Award nominee: the O. Henry Award-winning tale that inspired the movie *The Hunt*. A subject of mysterious rumors and superstition, the deserted Caribbean Island was shrouded in an air of peril. To Sanger Rainsford, who fell off a yacht and washed up on its shores, the abandoned isle was a welcome paradise. But unknown to the big-game hunter, a predator lurked in its lush jungles—one more dangerous than any he had ever encountered: a human. First published in 1924, this suspenseful tale "has inspired serial killers, films and stirred controversy in schools. A century on, the story continues to thrill" (*The Telegraph*). "[A] tense, relentless story of man-against-man adventure, in which the hunter Sanger Rainsford learns, at the hands of General Zaroff, what it means to be hunted." —Criterion

In a powerful debut novel that moves between the crowded streets of London and the desolate mountains of Iran, Yasmin Crowther paints a stirring portrait of a family shaken by events from decades ago and worlds away. On a rainy day in London the dark secrets and troubled past of Maryam Mazar surface violently, with tragic consequences for her daughter, Sara, and her newly orphaned nephew. Maryam leaves her English husband and family and returns to the remote Iranian village where her story began. In a quest to piece their life back together, Sara follows her mother and finally learns the terrible price Maryam once had to pay for her freedom, and of the love she left behind. Set against the breathtaking beauty of two very different places, this stunning family drama transcends culture and is, at its core, a rich and haunting narrative about mothers and daughters.

Management decisions on appropriate practices and policies regarding tropical forests often need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at different scales and how they varied through time in response to policy and other processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with stakeholder input, which focuses on FSC certification of natural tropical forests. More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy effects that FSC certification of natural forest has had in Brazil as well as in other tropical countries. The contents of this volume highlight the opportunities and constraints that those responsible for managing natural forests for timber production have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.

The fourth edition of *The Behavioral Sciences and Health Care* provides trainees in every area of health care with foundational concepts of behavioral science as applied to individual and population health and disease. The text breathes new life into the biopsychosocial model by highlighting the integrated sciences model, which focuses on interdependence of the contributions made by all of the sciences basic to medicine. This integration is exemplified by the unifying conceptual framework of evolutionary science, in which increasingly complex gene-individual-environmental interactions explain behavior at the individual and social level. Concise, updated chapters cover foundational elements of neuroscience, stress biology, normal psychology, and social factors in health care, addressing both traditional areas of behavioral science and topical concerns such as pain, palliative care, addictions, health care disparities, and violence. Uniquely among books of this kind, the text includes a thorough discussion of psychiatric disorders and therapies, aligned with current nosology (DSM-5). All chapters contain clinical pearls or vignettes, highlighted to emphasize applications in health care settings, as well as review questions and suggestions for further reading. A practice exam with extensive discussion of answers deepens students' understanding of core topics while preparing them for certifying and licensing exams. This text is particularly suited for use in systems-based and case-based curricula. Individual chapters can be used creatively in flipped classrooms and other active learning environments. Accessible and clear, without oversimplification, the book facilitates interdisciplinary education, providing a common core of knowledge for students in medicine, nursing, psychology, social work, and other health care professions.
