The instant New York Times bestseller featured on NPR's Weekend Edition with Scott Simon! B. J. Novak (bestselling author of *The Book With No Pictures*) described this groundbreaking poetry collection as "Smart and sweet, wild and wicked, brilliantly funny--it's everything a book for kids should be." Lauded by critics as a worthy heir to such greats as Silverstein, Seuss, Nash and Lear, Harris's hilarious debut molds wit and wordplay, nonsense and oxymoron, and visual and verbal sleight-of-hand in masterful ways that make you look at the world in a whole new wonderfully

upside-down way. With enthusiastic endorsements from bestselling luminaries such as Lemony Snicket, Judith Viorst, Andrea Beaty, and many others, this entirely unique collection offers a surprise around every corner. Adding to the fun: Lane Smith, bestselling creator of beloved hits like *It's a Book* and *The Stinky Cheese Man and Other Fairly Stupid Tales*, has spectacularly illustrated this extraordinary collection with nearly one hundred pieces of appropriately absurd art. It's a mischievous match made in heaven! "Ridiculous, nonsensical, peculiar, outrageous, possibly deranged--and utterly, totally, absolutely delicious. Read it! Immediately!" --Judith Viorst, bestselling author of *Alexander and the Terrible, Horrible, No Good, Very Bad*

Mathematics educators have long recognised the importance of helping students to develop problem-solving skills. More recently, they have searched for the best ways to provide their students with the knowledge encompassed in the Common Core State Standards (CCSS). This volume is one in a series from NCTM that equips classroom teachers with targeted, highly effective problems for achieving both goals at once. The 44 problems and tasks for students in this book are organised into the major areas of the high school Common Core: algebra, functions, geometry, statistics and probability, and number and quantity. Examples of modelling, the other main CCSS area, are incorporated throughout. Every domain that is required of all

mathematics students is represented. For each task, teachers will find a rich, engaging problem or set of problems to use as a lesson starting point. An accompanying discussion ties these tasks to the specific Common Core domains and clusters they help to explore. Follow-up sections highlight the relevant CCSS Standards for Mathematical Practice that students will engage in as they work on these problems. This book provides high school mathematics teachers with dozens of problems they can use as is, adapt for their classrooms, or be inspired by while creating related problems on other topics. For every mathematics educator, the books in this series will help to illuminate a crucial link between problem solving and the Common Core State

Standards.

This book is a collection of 57 very challenging math problems with detailed solutions. It is written for anyone who enjoys pondering difficult problems for great lengths of time. The problems are mostly classics that have been around for ages. They are divided into four categories: General, Geometry, Probability, and Foundational, with the Probability section constituting roughly half the book. Many of the solutions contain extensions/variations of the given problems. In addition to the full solution, each problem comes with a

hint. For the most part, algebra is the only formal prerequisite, although a few problems require calculus. Are you eager to tackle the Birthday Problem, Simpson's Paradox, the Game-Show Problem, the Boy/Girl Problem, the Hotel Problem, and of course the Green-Eyed Dragons? If so, this book is for you! You are encouraged to peruse the problems via either the Look Inside feature on Amazon, or the author's Harvard webpage (where all of the problems are posted), to gauge whether the level of difficulty is right for you.
