Tools to powerfully write about and manifest your life using the power found in the sacred sites of ancient Egypt • Reveals how to create meaning from one's life experiences and manifest new destinies through spiritual writing • Contains meditations and creative writing exercises exploring sacred themes in the Egyptian Book of the Dead and other hieroglyphic texts of ancient Egypt • Shares transformative and inspiring pieces written by those who've attended the authors' Egyptian sacred tours Within each of us is a story, a sacred story that needs to be told, of our heroic efforts and of our losses. The scribes of ancient Egypt devoted their lives to the writing of sacred stories. These technicians of the sacred were masters of hieroglyphic thinking, or heka--the proper words, in the proper sequence, with the proper intonation and the proper intent. Learning heka provided scribes with the power to invoke and create worlds through their words and thoughts. To the writer, heka is a magical way to create meaning from experience. Through heka we manifest new visions and new relationships to ourselves and to others. We can make new art filled with beauty and light. Revealing the spiritually transformative power of writing, the authors take us on a journey of self-discovery through the sacred sites of Egypt, from the Temple of Isis to the Great Pyramid of Giza. Through meditations and creative writing exercises exploring the powerful themes found in the hieroglyphic texts of ancient Egypt and the Egyptian

Book of the Dead, they show how, through writing, we can live beyond the ordinary, give our dreams form, and discover who we really are and what our lives really mean. Sharing transformative and inspiring pieces written by those who've attended their Egyptian sacred tours, the authors reveal how writing your spiritual biography allows you to reconnect to the creativity and divine within, face your fears, offer gratitude for what you have, manifest new destinies, and recognize your life as part of the sacred story of Earth.

Technical and vocational education and training at technical schools are major contributing factors in combating poverty, unemployment, and inequality. The primary purpose of technical and vocational education and training is to prepare students and learners for the world of work and for a smooth transition from education institutions into the workplace. As the Fourth Industrial Revolution continues to create more radical changes in the labor market, experts are calling for a reform of education, including vocational education and training and adult and professional education. *New Models for Technical and Vocational Education and Training* is an essential scholarly research book that examines TVET and CET colleges and programs that provide intermediate skills to enhance students' chances of employability and entrepreneurship in Industry 4.0. The book explores knowledge in respect to workforce preparation, digital skills development, teaching and learning of TVET, flexibility and articulation of TVET to respond to work-integrated learning, and reskilling and upskilling to avoid skill mismatches. It is ideal for TVET schools, academicians, curriculum designers, managers, training officers, administrators, vocational professionals, researchers, and students.

This book provides a comprehensive overview of the law surrounding PPPs in the Middle East and North African region. The significance of liberalised and integrated Public Private Partnership Contracts as an essential component of the world legal and policy order is well documented. The regulation of PPPs is justified economically to allow for competition in the relevant public service and to achieve price transparency, thus resulting in significant savings for the public sector. In parallel to the economic justifications, legal imperatives have also called for the regulation of PPPs in order to allow free movement of goods and services and to prohibit discrimination on grounds of nationality. The need for competitiveness and transparency in delivering public services through PPPs is considered a safeguard to achieve

international standards in delivering public utility services. First, it assesses the compatibility of the current PPPs legislation and regulation in the MENA region with the international standards of legislation and regulation prevalent in many other countries, including the UK, France and Brazil. Secondly, it compares the practices in the MENA region with those of international bodies such as the OECD and World Bank. Comparisons are then made between the MENA countries and those in Europe and Asia with regard to the influence of culture, policy and legal globalization. The book will be of interest to scholars and students in the field of international contract law, public law and state contracts, finance law and private law.

Romantic Egypt argues that the balance between knowing and not-knowing, between deciphering and imagining an archaic Egypt, was essential to the development of the Romantic imaginary, particularly in Britain and Germany: for the Romantics western philosophy and art had their birth in Ancient Egypt. **Information Technology in Geo-Engineering** CRC Press
The study of ancient law has blossomed in recent years. In English alone there have been dozens of studies devoted to classical Greek and Roman law, to the Roman legal codes, and to the legal traditions of the ancient Near East among many other topics. Legal documents written on papyrus began to be published in some abundance by the end of the nineteenth century; but even after substantial publication history, legal papyri have not received due attention from legal historians. This book blends the two usually distinct juristic scholarly traditions, classical and Egyptological, into a coherent presentation of the legal documents from Egypt from the Ptolemaic to the late Byzantine periods, all translated and accompanied by expert commentary. The volume will serve as an introduction to the rich legal sources from Egypt in the later phases of its ancient history as well as a tool to compare legal documents from other cultures. **Digest of United States Practice in International Law** Research Publishing Service

Concrete repair continues to be a subject of major interest to engineers and technologists worldwide. The concrete repair budget for the UK alone currently runs at some UKP 220 per annum. Some estimates have indicated that, worldwide, in 2010 the expenditure for maintenance and repair work will represent about 85% of the total expenditure in the construction field. It has been forecast that, in the same year in the USA, 50 billion dollars will be spent just for the restoration of deteriorated bridges and viaducts. An understanding of the latest techniques in repair and testing and inspection is thus crucial to the international construction industry. This book, with contributions from 34 countries, brings together the best in research, practical application, strategy and theory relating to concrete repair, testing and inspection, fire damage, composites and electro-chemical repair.

An authoritative and multidisciplinary Companion to Egypt during the Greco-Roman and Late Antique period With contributions from noted authorities in the field, A Companion to Greco-Roman and Late Antique Egypt offers a comprehensive resource that covers almost 1000 years of Egyptian history, starting with the liberation of Egypt from Persian rule by Alexander the Great in 332 BC and ending in AD 642, when Arab rule started in the Nile country. The Companion takes a largely sociological perspective and includes a section on life portraits at the end of each part. The theme of identity in a multicultural environment and a chapter on the quality of life of Egypt's inhabitants clearly illustrate this objective. The authors put the emphasis on the changes that occurred in the Greco-Roman and Late Antique periods, as illustrated by such topics as: Traditional religious life challenged; Governing a country with a past: between tradition and innovation; and Creative minds in theory and praxis. This important resource: Discusses how Egypt became part of a globalizing world in Hellenistic, Roman and Byzantine times Explores notable innovations by the Ptolemies and Romans Puts the focus on the *longue durée* development Offers a thematic and multidisciplinary approach to the subject, bringing together scholars of different disciplines Contains life portraits in which various aspects and themes of people's daily life in Egypt are discussed Written for academics and students of the Greco-Roman and Late Antique Egypt period, this Companion offers a guide that is useful for students in the areas of Hellenistic, Roman, Byzantine and New Testament studies.

A book of wisdom teachings and rituals that invoke ancient Egyptian deities to awaken human consciousness • Provides guided shamanic visualizations to invoke 26 of the most significant gods • Takes the reader through shamanic portals of death, rebirth, and illumination • Reconciles internal conflict through a sacred marriage of heart and mind In *Shamanic Mysteries of Egypt*, Nicki Scully and Linda Star Wolf renew humanity's connection to the ancient gods of Egypt, the neteru. Voices from these divine ancestors remind us of the healing power of the heart, and call us to bring their consciousness into

the present to help us remember our true nature as divine humans with sacred purpose. The authors provide rituals, meditations, and rites of passage to help us meet our personal and planetary challenges with grace, wisdom, and love. The shamanic initiations provided are invoked, directly experienced, and transformed into embodied wisdom that awakens consciousness and illumines the intelligence of the heart. Scully and Star Wolf focus their rituals on 26 of the primary divine entities that preside over the ancient mysteries whose roots are in Old Kingdom and pre-historic Egypt. This fresh interpretation of ancient mysteries unites the energies of Thoth and Anubis to guide us through the current cycle of Earth changes and to help us remember who we really are at heart. Through these passages, Anubis lives up to his ancient title as the Opener of the Way, and Thoth as the Architect of Higher Learning. Together they evoke their power to unite heart and mind in the sacred marriage that brings transformation, renewal, and the awakening of consciousness.

Shamanic Mysteries of Egypt Rowman & Littlefield

"The ancient Egyptians were firmly convinced of the importance of magic, which was both a source of supernatural wisdom and a means of affecting one's own fate. The gods themselves used it for creating the world, granting mankind magical powers as an aid to the struggle for existence. Magic formed a link between human beings, gods, and the dead. Magicians were the indispensable guardians of the god-given cosmic order, learned scholars who were always searching for the Magic Book of Thoth, which could explain the wonders of nature. *Egyptian Magic*, illustrated with wonderful and mysterious objects from European museum collections, describes how Egyptian sorcerers used their craft to protect the weakest members of society, to support the gods in their fight against evil, and to imbue the dead with immortality, and explores the arcane systems and traditions of the occult that governed this well-organized universe of ancient Egypt."--Publisher's website.

Increase the Durability and Performance of Concrete during Its Lifetime While reinforced concrete is a durable material used for a wide range of construction projects in civil engineering, certain factors must be considered during its design, construction, and maintenance. This includes a variety of conditions impacting strength and performance relevant to specific structural systems, and the application of numerous codes. *Advanced Materials and Techniques for Reinforced Concrete Structures*, Second Edition discusses both traditional and new systems in concrete structures, outlines the advantages and disadvantages of each system and its importance to construction durability and reliability, and presents the latest advanced materials and construction techniques currently used in reinforced concrete structures. New Edition Now Includes Eurocode, Egyptian Code, British Standard, and American Specifications (ACI) In addition to highlighting new materials that can be used to enhance concrete strength and performance, the book describes the traditional and newest materials used in concrete technology; and presents new approaches to utilizing an integrity management system. It provides a comparison of concrete strength utilizing ACI, BS, Eurocode, and Egyptian codes of practice, and also highlights different loads that affect buildings from the application of the different international codes. By using this book, readers will learn how to: Choose the most reasonable structural system, materials, method of construction, and maintenance plan Determine the optimum system to meet stability, reliability, and architectural requirements Understand the statistical parameters that govern quality control in concrete construction projects Analyze and meet concrete construction quality control criteria Implement a maintenance plan incorporating modern construction techniques *Advanced Materials and Techniques for Reinforced Concrete Structures*, Second Edition serves as a practical guide on advanced materials, design, and construction techniques in concrete structures under different environmental conditions. Most mission studies have focused on the work of Western missionaries going to Majority World countries, with few examining indigenous churches and their relationship with Western mission agencies in practicing mission. This book is a historical study of the relationship between the Evangelical Church in Egypt and the American Presbyterian Mission. Wahba covers from when the missionary work began in 1854 until after the departure of the Mission from Egypt in 1967, and the transfer of all the work to the Egyptian Evangelical Church. Tracing the mission work of Egyptians within Egypt and neighbouring Sudan, Wahba analyses the impact that the relationship with the American Mission had and how it determined the indigenous

Church's practice and perspective of mission.

The ongoing population growth is resulting in rapid urbanization, new infrastructure development and increasing demand for the Earth's natural resources (e.g., water, oil/gas, minerals). This, together with the current climate change and increasing impact of natural hazards, imply that the engineering geology profession is called upon to respond to new challenges. It is recognized that these challenges are particularly relevant in the developing and newly industrialized regions. The idea beyond this volume is to highlight the role of engineering geology and geological engineering in fostering sustainable use of the Earth's resources, smart urbanization and infrastructure protection from geohazards. We selected 19 contributions from across the globe (16 countries, five continents), which cover a wide spectrum of applied interdisciplinary and multidisciplinary research, from geology to engineering. By illustrating a series of practical case studies, the volume offers a rather unique opportunity to share the experiences of engineering geologists and geological engineers who tackle complex problems working in different environmental and social settings. The specific topics addressed by the authors of chapters included in the volume are the following: pre-design site investigations; physical and mechanical properties of engineering soils; novel, affordable sensing technologies for long-term geotechnical monitoring of engineering structures; slope stability assessments and monitoring in active open-cast mines; control of environmental impacts and hazards posed by abandoned coal mines; assessment of and protection from geohazards (landslides, ground fracturing, coastal erosion); applications of geophysical surveying to investigate active faults and ground instability; numerical modeling of seabed deformations related to active faulting; deep geological repositories and waste disposal; aquifer assessment based on the integrated hydrogeological and geophysical investigation; use of remote sensing and GIS tools for the detection of environmental hazards and mapping of surface geology. This volume is part of the proceedings of the 1st GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures, Egypt 2017. **Labour Law and Practice in the United Arab Republic (Egypt)**. Information technology continues to evolve and remains central to all aspects of geo-engineering. Key issues are the effective use and re-use of data, particularly within Building Information

Modelling (BIM) frameworks; the use of smart monitoring; artificial intelligence and data processing techniques. All these contribute to improvements in design processes, greater construction efficiency and more cost-effective maintenance. This book presents the proceedings of the 2nd International Conference on Information Technology in Geo-Engineering (ICITG 2014), held in Durham, United Kingdom, in July 2014. Topics of the conference cover the full range of information technology applications in geotechnical and geo-environmental engineering, as well as engineering geology. The focus of the papers in this book is on geotechnical data, specifically dealing with issues related to data standards and data exchange. The wider issues of managing data and data sharing through global web portals are also addressed. Also included are papers on artificial intelligence applications, and the use of expert (knowledge-based) systems, artificial neural networks and data mining techniques, particularly as applied to the identification of properties of geo-materials. The use of web-based materials for education, data processing techniques, and the numerical modeling of tunnels, piles and anchors are also discussed. This book will be of interest to the geo-engineering community and is the second in a series of proceedings designed to keep practitioners and researchers abreast of the developments in information technology which relate to their work.
