Precalculus Brooks Cole

This undisputed leader in the field is the choice for instructors who wish to include a moderate review of algebra at the beginning of their precalculus level course in which graphing technology plays an integral role. The text introduces trigonometry first with a right triangle approach and then with the unit circle. The text's unparalleled exercises, motivating real-life applications, cutting-edge design, and innovative ancillaries and technology resources make it the most complete program available. For a complete listing of features, see Larson/Hostetler/Edwards, *College Algebra: A Graphing Approach, 3/e*.

MEI A Level Mathematics Year 2 4th Edition Prindle Weber & Schmidt

This textbook has been in constant use since 1980, and this edition represents the first major revision of this text since the second edition. It was time to select, make hard choices of material, polish, refine, and fill in where needed. Much has been rewritten to be even cleaner and clearer, new features have been introduced, and some peripheral topics have been removed. The authors continue to provide real-world, technical applications that promote intuitive reader learning. Numerous fully worked examples and boxed and numbered formulas give students the essential practice they need to learn mathematics. Computer projects are given when appropriate, including BASIC, spreadsheets, computer algebra systems, and computer-assisted drafting. The graphing calculator has been fully integrated and calculator screens are given to introduce computations. Everything the technical student may need is included, with the emphasis always on clarity and practical applications.

This text uses the graphing utility to enhance the study of mathematics. Technology is used as a tool to solve problems, motivate concepts, and explore mathematical ideas. Sullivan's Series "Enhanced with Graphing Utilities" provides clear and focused coverage. Many of the problems are solved using both algebra and a graphing utility, and the text illustrates the advantages and benefits of each approach. Technology is used to solve problems when no algebraic solution is available and to help students visualize certain concepts. Topics such as curve fitting and data analysis and

CIBL projects are incorporated as appropriate.
