The science behind the traits and quirks that drive creative geniuses to make spectacular breakthroughs What really distinguishes the people who literally change the world--those creative geniuses who give us one breakthrough after another? What differentiates Marie Curie or Elon Musk from the merely creative, the many one-hit wonders among us? Melissa Schilling, one of the world's leading experts on innovation, invites us into the lives of eight people--Albert Einstein, Benjamin Franklin, Elon Musk, Dean Kamen, Nikola Tesla, Marie Curie, Thomas Edison, and Steve Jobs--to identify the traits and experiences that drove them to make spectacular breakthroughs, over and over again. While all innovators possess incredible intellect, intellect alone, she shows, does not create a breakthrough innovator. It was their personal, social, and emotional quirks that enabled true genius to break through--not just once but again and again. Nearly all of the innovators, for example, exhibited high levels of social detachment that enabled them to break with norms, an almost maniacal faith in their ability to overcome obstacles, and a passionate idealism that pushed them to work with intensity even in the face of criticism or failure. While these individual traits would be unlikely to work in isolation--being unconventional without having

high levels of confidence, effort, and goal directedness might, for example, result in rebellious behavior that does not lead to meaningful outcomes--together they can fuel both the ability and drive to pursue what others deem impossible. Schilling shares the science behind the convergence of traits that increases the likelihood of success. And, as Schilling also reveals, there is much to learn about nurturing breakthrough innovation in our own lives--in, for example, the way we run organizations, manage people, and even how we raise our children.

From the lens of holistic systems theory, this book discusses strategic management adapted to evolving convergence in an era of advanced ICT from the viewpoint of the major management elements of strategy, organizations, technologies, operations and leadership. To discuss corporate change in response to such advanced technology in a theoretical and empirical manner, it is necessary not only to analyze and consider individual management elements such as strategy, organizations, technologies, operations and leadership in a piece-meal manner but also to determine the research issues from a framework based on a holistic management perspective

through systems theory including interaction between and among the respective individual management elements (from micro to macro elements). Applying both innovation theory and capabilities theory, this book presents a new framework and knowledge for holistic strategic management from a systems theory lens that focuses on the issue of how major corporations can develop capabilities to achieve strategic innovation in response to the impacts of advanced ICT on corporate management.

Volume 6 of Research on Technological Innovation, Management and Policy contains five papers on strategic change in firms and industries. All five discuss aspects of the interrelationships between technology strategy, competitive strategy, and organization and management. The first two address these at a level of the industry; the next two at firm level; in the final chapter, the level of analysis is primarily the technology. These five chapters are illustrative of themes in current research that are shaping the field of strategic management technology and innovation. They build well on earlier work in the field and thereby support its further empirical and theoretical development. They also provide useful insights for practicing managers faced with the challenges of changing technologies and a rapid rate of innovation.

Essay from the year 2012 in the subject Computer Science - Internet, New Technologies, course: Strategic Management, language: English, abstract: International experience shows constantly, through studies and practical applications, that fostering innovation relies more on strategic planning, research and search for specific data. The development of business strategies would have never been more challenging or more important than in today's competitive environment through which corporate strategies must transcend past limits. The paper analyzes three case studies. All of them are innovative companies however technology was used as part of their innovation for Easy Jet and Korres, whereas in PARC it was its core business. In the case of the two successful innovators Korres S.A. and Easy Jet, technology dealt with the development of the company's R&D (Korres), it was used as a facilitator of processes which were the key factor for lowering production costs (Easy Jet) and finally in the case of PARC - Xerox technology was not focused on customer needs.
