This Civil Engineering Book is one-of-a-kind.

This book is structured to raise the level of expertise in Civil Engineering and to improve the

competitiveness in the

global markets. A civil

engineer is someone

who applies scientific knowledge to improve

infrastructure and

common utilities that

meet basic human

needs. Civil engineers

plan, design and

manage large

construction projects.

This could include

bridges,

buildings,dams,

tunnels, buildings,

airports, water and

sewage systems,

transport links and

other major structures.

They use computer modelling software and data from surveys, tests and maps to create project blueprints. These plans advise contractors on the best course of action and help minimise environmental impact and risk. Buildings and bridges are often the first structures to come to mind, because they are the most obvious engineering creations. But civil engineers are also responsible for less visible creations and contributions. Every time we open a water faucet, we expect water to come out, without thinking that civil engineers made it possible, in many cases by designing systems that transport water to cities from mountain sources that are

sometimes hundreds of miles away. Civil engineering is one of the oldest and broadest engineering professions. It focuses on the infrastructure necessary to support a civilized society. The Roman aqueducts, the great European cathedrals, and the earliest metal bridges were built by highly skilled forerunners of the modern civil engineer. These craftsmen of old relied on their intuition, trade skills, and experience-based design rules, or heuristics, derived from years of trial and error experiments but rarely passed on to the next generation. This book of Civil Engineering covers

 contrast, today's civil
 engineers bring to bear
 on these problems a
 knowledge of the
 physical and natural
 sciences, mathematics,
 computational
 methods, economics,
 and project
 management. Civil
 engineers design and

construct buildings,
 transportation systems
 (such as roads,

 relies on civil engineers
 to maintain and

 Those projects that are
