Transport Justice develops
a new paradigm for
transportation planning
based on principles of
justice. Author Karel
Martens starts from the
observation that for the
last fifty years the focus
of transportation planning
and policy has been on

the performance of the
transport system and
ways to improve it,
without much attention
being paid to the persons
actually using – or failing
to use – that transport
system. There are far-
reaching consequences of
this approach, with some
enjoying the fruits of the
improvements in the
transport system, while
others have experienced
a substantial deterioration
in their situation. The
growing body of academic
evidence on the resulting

disparities in mobility and
accessibility, have been
paralleled by increasingly
vocal calls for policy
changes to address the
inequities that have
developed over time.
Drawing on philosophies
of social justice, Transport
Justice argues that
governments have the
fundamental duty of
providing virtually every
person with adequate
transportation and thus of
mitigating the social
disparities that have been
created over the past

decades. Critical reading for transport planners and students of transportation planning, this book develops a new approach to transportation planning that takes people as its starting point, and justice as its end.

Capital adequacy regulations or quantity restrictions on bank portfolios put forward by the Basle Committee on Banking Supervision have virtually become an international standard of prudential regulation. Recent proposals aim at extending this approach to market risks, in particular to foreign exchange risk. The present paper provides a critical analysis of proposals to introduce foreign exchange position limits on a uniform cross-country basis, focusing on

their effectiveness and their possible impact on the functioning of both mature and developing foreign exchange markets. Theoretical considerations are underpinned in the paper with descriptions of existing or proposed regulations, in a broad range of both industrial and developing countries. Experiences with the use of foreign exchange position limits in developing countries provide insight into their widespread use for other than prudential purposes,

in particular to support exchange rate and exchange control policies.

Land Rover Series II, IIA and III Haynes Manuals This book tells a story of successful prison reform that brought the recidivism rate of prisoners down from 44% to 24%. In the process of this reform, the entire Prison Service was transformed from a custody focused mindset

to a rehabilitation centred culture. This change was wrought despite the lack of enthusiasm of the then political leadership. The author describes his personal role in the reform effort, the methodology used to engender change in organizational culture and the struggles for the soul of the prison service and the hearts and minds of all those involved. These include organizations involved in the aftercare of ex-offenders, volunteers who came forward to assist in the

efforts and the families and employers of offenders and ex-offenders. The journey ends with the Yellow Ribbon Project that now embodies the rehabilitative efforts for ex-offenders. The Making of Captains of Lives is a personal account of a public sector leader who has helped built a highly efficient prison system in Singapore, providing a strong case study for successful change management and public sector leadership. It will encourage the hearts of

all those civil servants who believe in serving their nations and societies by devoting themselves to a worthy cause in their day-to-day work.

Penguin Public policy analysts and political pundits alike tend to describe the policymaking process as a reactive sequence in which government develops solutions for clearly evident and identifiable problems. While this depiction holds true in many cases, it fails to account for instances in

which public policy is enacted in anticipation of a potential future problem. Whereas traditional policy concerns manifest themselves through ongoing harms, "anticipatory problems" are projected to occur sometime in the future, and it is the prospect of their potentially catastrophic impact that generates intense speculation and concern in the present.

Anticipatory Policymaking: When Government Acts to Prevent Problems and Why It Is So Difficult

provides an in depth examination of the complex process through which United States government institutions anticipate emerging threats. Using contemporary debates over the risks associated with nanotechnology, pandemic influenza, and global warming as case study material, Rob A. DeLeo highlights the distinctive features of proactive governance. By challenging the pervasive assumption of reactive policymaking, DeLeo provides a dynamic

approach for conceptualizing the political dimensions of anticipatory policy change.

Witchcraft and magic are topics of enduring interest for many reasons. The main one lies in their extraordinary interdisciplinarity: anthropologists, folklorists, historians, and more have contributed to build a body of work of extreme variety and consistence. Of course, this also means that the

subjects themselves are not easy to assess. In a very general way, we can define witchcraft as a supernatural means to cause harm, death, or misfortune, while magic also belongs to the field of supernatural, or at least esoteric knowledge, but can be used to less dangerous effects (e.g., divination and astrology). In Western civilization, however, the witch hunt has set a very peculiar perspective in which diabolical witchcraft, the invention of the Sabbat, the persecution of many

thousands of (mostly) female and (sometimes) male presumed witches gave way to a phenomenon that is fundamentally different from traditional witchcraft. This Special Issue of Religions dedicated to Witchcraft, Demonology, and Magic features nine articles that deal with four different regions of Europe (England, Germany, Hungary, and Italy) between Late Medieval and Modern times in different contexts and social milieus. Far from

pretending to offer a complete picture, they focus on some topics that are central to the research in those fields and fit well in the current “cumulative concept of Western witchcraft” that rules out all mono-causality theories, investigating a plurality of causes.
