We've all been there. Seduced by the sleek designs and smart capabilities of the newest gadgets, we end up stumped by their complicated set-up instructions and exasperating error

messages. In this fascinating history, Joseph J. Corn maps two centuries of consumer frustration and struggle with personal technologies. Aggravation with the new machines people adopt and live with is as old as the industrial revolution. Clocks, sewing machines, cameras, lawn mowers, bicycles, electric lights, cars, and computers: all can empower and exhilarate, but they can also exact a form of servitude. Adopters puzzle over which type and model to

buy and then how to operate the device, diagnose its troubles, and meet its insatiable appetite for accessories, replacement parts, or upgrades. It intrigues Corn that we put up with the frustrations our technology thrusts upon us, battling with the unfamiliar and climbing the steep learning curves. It is this ongoing struggle, more than the uses to which we ultimately put our machines, that animates this quizzical study. Having extensively researched owner's

manuals, computer user-group newsletters, and how-to literature, Corn brings a fresh, consumer-oriented approach to the history of technology. User Unfriendly will be valuable to historians of technology, students of American culture, and anyone interested in our modern dependency on machines and gadgets.

In the first decades after mass production, between 1913 and 1939, middle-class Americans not only bought cars but also enthusiastically redesigned them. By examining the ways

Americans creatively adapted their automobiles, Tinkering takes a fresh look at automotive design from the bottom up, as a process that included manufacturers, engineers, advice experts, and consumers in various guises. Franz argues that automobile ownership opened new possibilities for ingenuity among consumers even as large corporations came to control innovation. Franz weaves together a variety of sources, from serial fiction to corporate

documents, to explore tinkering as a form of authority in a culture that valued ingenuity. Women drivers represented one group of consumers who used tinkering to advance their claim to social autonomy. Some canny drivers moved beyond modifying their individual cars to become independent inventors, patenting and selling automotive accessories for the burgeoning national demand for aftermarket products. Earl S. Tupper was one such tinkerer who went on to

invent Tupperware. These savvy tinkerers worked in a changing landscape of invention shaped increasingly by automotive giants. By the 1930s, Ford and General Motors worked to change the popular discourse of ingenuity and used the world's fairs of the Depression as a stage to promote a hierarchy of innovation. Franz not only demonstrates the entrepreneurial spirit of American consumers but she engages larger historical questions about gender, consumption and

ingenuity while charting the impact corporate expansion on tinkering during the first half of the twentieth century. Copyright Office, Library of Congress Information on routine servicing and repair for the DIY mechanic, with tasks described and photographed in a step-by-step sequence. Ford parts are specially designed and constructed to meet the various strains and stresses to which the car is subjected. "Genuine Ford parts are sold at prices as low as is consistent with high quality. It is false economy to buy imitation parts at cheap prices both from a standpoint of serviceability and the possibility of endangering life and limb as a result of

using inferior materials. "If you do not do your own repairing, make sure that genuine Ford parts are used in repairing your car by taking it to an authorized Ford dealer or service station to have the work done." \*\*\* There are a total of 393 pages in this volume as they appeared in the hard cover version, including the first 10 pages not folioed in numerical order and the 32 half-tone illustrations.
