RICHARDSON ZOE

Astronomy U of Minnesota Press

The ocean has absorbed a significant portion of all human-made carbon dioxide emissions. This benefits human society by moderating the rate of climate change, but also causes unprecedented changes to ocean chemistry. Carbon dioxide taken up by the ocean decreases the pH of the water and leads to a suite of chemical changes collectively known as ocean acidification. The long term consequences of ocean acidification are not known, but are expected to result in changes to many ecosystems and the services they provide to society. *Ocean Acidification: A National Strategy to Meet the Challenges of a Changing Ocean* reviews the current state of knowledge, explores gaps in understanding, and identifies several key findings. Like climate change, ocean acidification is a growing global problem that will intensify with continued CO₂ emissions and has the potential to change marine ecosystems and affect benefits to society. The federal government has taken

positive initial steps by developing a national ocean acidification program, but more information is needed to fully understand and address the threat that ocean acidification may pose to marine ecosystems and the services they provide. In addition, a global observation network of chemical and biological sensors is needed to monitor changes in ocean conditions attributable to acidification.

Interdisciplinary Science in Support of Nature and People Cambridge University Press

Illuminating the conditions for global governance to have precipitated the devastating decline of one of the ocean's most majestic creatures The International Commission for the Conservation of Atlantic Tunas (ICCAT) is the world's foremost organization for managing and conserving tunas, seabirds, turtles, and sharks traversing international waters. Founded by treaty in 1969, ICCAT stewards what has become under its tenure one of the planet's most prominent endangered fish: the Atlantic bluefin tuna. Called "red gold" by industry insiders for the exorbitant price her ruby-colored flesh commands in the sushi economy, the giant bluefin tuna has crashed in size and number under ICCAT's custodianship. With regulations to conserve these sea creatures in place for

half a century, why have so many big bluefin tuna vanished from the Atlantic? In *Red Gold*, Jennifer E. Telesca offers unparalleled access to ICCAT to show that the institution has faithfully executed the task assigned it by international law: to fish as hard as possible to grow national economies. ICCAT manages the bluefin not to protect them but to secure export markets for commodity empires—and, as a result, has become complicit in their extermination. The decades of regulating fish as commodities have had disastrous consequences. Amid the mass extinction of all kinds of life today, *Red Gold* reacquaints the reader with the splendors of the giant bluefin tuna through vignettes that defy technoscientific and market rationales. Ultimately, this book shows, changing the way people value marine life must come not only from reforming ICCAT but from transforming the dominant culture that consents to this slaughter.

Project Earth Science Holt McDougal

"Meldahl tells the scientific story of the Southern California coast by blending research from geology and oceanography with a compelling narrative and clear illustrations that take readers out in the field with the author to learn about the processes that have generated the coast as it exists

today and how the region will change in the future. The author's geographic scope spans from San Diego to Point Conception, taking in coastal portions of San Diego, Orange, Ventura, Los Angeles, and Santa Barbara counties"--Provided by publisher.

The Managed Extinction of the Giant Bluefin Tuna Penn State Press

Give your students, librarians, and teachers accurate and reliable information on climate change with Earth's Changing Environment. Written for ages 10 to 17, this comprehensive look at the environment focuses on climate, greenhouse effect, global warming, and the Kyoto Protocol while exploring the delicate web of life with articles on ecology, biogeography, biodiversity, endangered species, deforestation and desertification. The effects of environmental pollution and efforts to protect the environment and to conserve its resources are also addressed.

Earth's Changing Environment John Wiley & Sons

ONE OF THE NEW YORK TIMES BOOK REVIEW'S 10 BEST BOOKS OF THE YEAR A major book about the future of the world, blending intellectual and natural history and field reporting into a powerful account of the mass extinction unfolding before our eyes Over the last half a billion years, there have been five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. This time around, the cataclysm is us. In *The Sixth Extinction*, two-time winner of the National Magazine Award and New Yorker writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamanian golden frog, staghorn coral, the great auk, and the Sumatran rhino. Through these stories, Kolbert provides a moving account of the disappearances occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up through the present day. The sixth extinction is likely to be mankind's most lasting legacy; as Kolbert observes, it compels us to rethink the fundamental question of what it means to be human.

Listening to the Sea Geological Society Publishing House

When a meteorite lands in Surrey, the locals don't know what to make of it. But as Martians emerge and begin killing bystanders, it quickly becomes clear—England is under attack. Armed soldiers converge on the scene to ward off the invaders, but meanwhile, more Martian cylinders land on Earth, bringing reinforcements. As war breaks out across England, the locals must fight for their lives, but life on Earth will never be the same. This is an unabridged version of one of the first fictional accounts of extraterrestrial invasion. H. G. Wells's military science fiction novel was first published in book form in 1898, and is considered a classic of English literature.

Earth Observation Open Science and Innovation Holt Rinehart & Winston

"One of the four-volume Project Earth Science series" --Introduction.

The Search for the Origin of Life Holt Rinehart & Winston

This book is a current, comprehensive and holistic assessment of the challenges facing a developing African state within the global context and is an up-to-the-minute review of the state of the South African environment.

Earth Science: Rocks - Mineral Mixtures NSTA Press

Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

Holt Science and Technology Univ of California Press

America's unrestricted access to the Atlantic and Pacific Oceans, Gulf of Mexico, rivers, Great Lakes, and Arctic region powers domestic and global commerce. The ease of moving cargo and people beyond our coasts fuels the Nation's competitive advantage, advances trade, generates

capital, and drives the domestic economy forward, in turn projecting strength abroad and safeguarding our national interests. Similarly, the biological diversity and productivity of the ocean sustains the health of coastal communities and promotes a vibrant national economy. The ocean also plays a fundamental role in the Earth system. Ensuring responsible ocean stewardship with science and technology (S&T) breakthroughs depends on a strategic Federal portfolio supported by foundational basic research. *Science and Technology for America's Oceans: A Decadal Vision* identifies pressing research needs and areas of opportunity within the ocean S&T enterprise for the decade 2018-2028.

El-Hi Textbooks in Print National Academies Press

Part of the publisher's science program for middle school students, focusing on the Earth.

Holt Science and Technology 2002 Wiley-Blackwell

Special Papers in Palaeontology, published by The Palaeontological Association, is a series of substantial separate works conforming to the style of the Palaeontology journal. Two issues are published each year and feature high standard illustrations. Discusses the nature and quality of the conodont fossil record. Brings together researchers, geologists and enthusiasts who continue to find material of significance. Contributors include Walter C. Sweet, Howard A. Armstrong, Oliver Lehnert, James F. Miller and Steven A. Leslie. Includes 3 plates, 9 tables and 79 text-figures.

Ecohorror Studies in the Anthropocene Holt Rinehart Winston

This book is published open access under a CC BY 4.0 license. Over the past decades, rapid developments in digital and sensing technologies, such as the Cloud, Web and Internet of Things, have dramatically changed the way we live and work. The digital transformation is revolutionizing our ability to monitor our planet and transforming the way we access, process and exploit Earth Observation data from satellites. This book reviews these megatrends and their implications for the Earth Observation community as well as the wider data economy. It provides insight into new paradigms of Open Science and Innovation applied to space data, which are characterized by openness, access to large volume of complex data, wide availability of new community tools, new techniques for big data analytics such as Artificial Intelligence, unprecedented level of computing power, and new types of collaboration among researchers, innovators, entrepreneurs and citizen scientists. In addition, this book aims to provide readers with some reflections on the future of Earth Observation, highlighting through a series of use cases not just the new opportunities created by the New Space revolution, but also the new challenges that must be addressed in order to make the most of the large volume of complex and diverse data delivered by the new generation of satellites.

Special Report of the Intergovernmental Panel on Climate Change University of Pittsburgh Pre

Through a rigorous integration of policy and science, Robert Wilder suggests a much-improved second-generation governance of the oceans and coasts and proposes new ideas for resolving the environmental policy stalemate found within the U.S. government.

Fear and Nature Jacana Media

This expanded and fully updated Second Edition of the most comprehensive and successful book on lobsters, comprises contributions from many of the world's experts, each providing core information for all those working in lobster biology, fisheries research and management and lobster aquaculture. Under the editorship of Bruce Phillips, the Second Edition of *Lobsters: Biology, Management, Fisheries and Aquaculture* delivers exhaustive coverage of these fascinating creatures, stretching from growth and development to management and conservation. A number of chapters from the First Edition covering Growth, Reproduction, Diseases, Behaviour, Nutrition, Larval and Post-Larval Ecology and Juvenile and Adult Ecology have been replaced by new chapters including Lobsters in Ecosystems, Genetics, Translocation, Climate Change, Ecolabelling of Lobsters, Casitas and Other Artificial Shelters, Systems to maximise Economic Benefits.. These new chapters reflect changes

that are occurring in lobster management and new research developments brought on by social, climatic and economic changes. As well as information from new research output, information in each chapter is also included on individual commercial Genera, including aspects of Species and distribution, Predators and diseases, Ecology and behaviour, Aquaculture and enhancement, Harvest of wild populations and their regulations, Management and conservation. The chapter on slipper lobsters has also been expanded to include *Thenus* and *Ibacus* species which are now subject to commercial fisheries. The changes that have occurred in some lobster fisheries, the new management arrangements in place, the status of stocks and the current economic and social situation of each fishery have also been covered and discussed in great detail. Fisheries scientists, fisheries managers, aquaculture personnel, aquatic and invertebrate biologists, physiologists, ecologists, marine biologists and environmental biologists will all find *Lobsters* Second Edition to be a vital source of reference. Libraries in all universities and research establishments where biological and life sciences and fisheries and aquaculture are studied and taught will find it an extremely valuable addition to their shelves.

Life on an Ocean Planet Cambridge University Press

Teacher digital resource package includes 2 CD-ROMs and 1 user guide. Includes Teacher curriculum guide, PowerPoint chapter presentations, an image gallery of photographs, illustrations, customizable presentations and student materials, Exam Assessment Suite, PuzzleView for creating word puzzles, and LessonView for dynamic lesson planning. Laboratory and activity disc includes the manual in both student and teacher editions and a lab materials list.

Holt Science and Technology Henry Holt and Company

A graduate-level 2004 textbook describing the use of satellites to study oceanic physical and biological properties.

Seasat Views Oceans and Sea Ice with Synthetic-aperture Radar Springer

Ecohorror represents human fears about the natural world—killer plants and animals, catastrophic weather events, and disquieting encounters with the nonhuman. Its portrayals of animals, the environment, and even scientists build on popular conceptions of zoology, ecology, and the scientific process. As such, ecohorror is a genre uniquely situated to address life, art, and the dangers of scientific knowledge in the Anthropocene. Featuring new readings of the genre, *Fear and Nature* brings ecohorror texts and theories into conversation with other critical discourses. The chapters cover a variety of media forms, from literature and short fiction to manga, poetry, television, and film. The chronological range is equally varied, beginning in the nineteenth century with the work of Edgar Allan Poe and finishing in the twenty-first with Stephen King and Guillermo del Toro. This range highlights the significance of ecohorror as a mode. In their analyses, the contributors make explicit connections across chapters, question the limits of the genre, and address the ways in which our fears about nature intersect with those we hold about the racial, animal, and bodily "other." A foundational text, this volume will appeal to specialists in horror studies, Gothic studies, the environmental humanities, and ecocriticism. In addition to the editors, the contributors include Kristen Angierski, Bridgitte Barclay, Marisol Cortez, Chelsea Davis, Joseph K. Heumann, Dawn Keetley, Ashley Kniss, Robin L. Murray, Brittany R. Roberts, Sharon Sharp, and Keri Stevenson.
