 Contemporary Health Studies: An Introduction provides a lively and accessible introduction to the current issues and key debates in this area. It contains a strong, up-to-date, global, social-scientific focus examining the human experience of health particularly emphasizing its social, political and environmental dimensions. The book's diverse content is usefully divided into three main parts. Part one sets the scene looking closely at the definition of health studies and the debates surrounding the concept of health. Part two explores different disciplines underpinning Health Studies including chapters such as sociology, psychology, anthropology and health promotion. Part three of the book explores the determinants of health and contains chapters on individual factors influencing health, policy influences on health, public health and the global context of health. Each chapter: Opens with a list of key learning outcomes; Contains topical learning tasks; Poses questions for reflection and debate; Provides an in-depth case study to summarise the key arguments made. Carefully chosen tables, figures and

photographs bring the text to life, whilst the companion web-site offers additional learning resources for both students and lecturers alike. Contemporary Health Studies: An Introduction is an essential guide for undergraduate health students written by three authors who have a wealth of teaching experience in this subject area. Their book will inspire readers to consider the human experience of health within contemporary global society as it is mediated by individual, societal and global contexts.

This book is the outcome of a symposium where leading researchers, mainly in developmental psychology, came together to discuss the implications of the emerging developmental science and the holistic approach. In doing this, the authors wanted to honor a distinguished colleague, David Magnusson, and his career-long contributions to this field. The purpose of the book is to discuss the profound implications for developmental science of the holistic paradigm, especially with regard to the individual development within psychology. Against the background of their own empirical, theoretical, or methodological research, the authors have tried to identify what is needed for the developmental theory and methods within this paradigm and discuss possibilities and limitations in relation to conventional approaches.

The mental health needs of older people are all too often overlooked or put down to the inevitable consequences of ageing. This textbook will make it much easier for health, social care and third sector workers to identify, treat and support the needs of this population. The book takes an interdisciplinary team approach and sets the scene by looking at different practice contexts in the United Kingdom and the increasingly important role played by social care in addressing the mental health needs of older people. A number of more clinically focused chapters then cover: mental health promotion anxiety and depression ageing and psychosis alcohol and dual diagnosis dementia later life liaison services complex and enduring mood disorders. Each clinical chapter makes use of extended and detailed case studies which illuminate the team's role in the assessment-intervention-evaluation cycle and ensure the text's application to practice. Service user and family perspectives are drawn on throughout and current practice exemplars outlined. The final chapter distils key messages from the book and sets a number of key challenges. Mental Health and Later Life highlights the rewards and complexity of working with older people with mental health needs and their families. It is invaluable reading for all those learning about, or working with, this population.

This book provides a broad overview of quality health care for people with intellectual and developmental disabilities (IDD). It focuses on providing the reader a practical approach to dealing with the health and well-being of people with IDD in general terms as well as in dealing with specific conditions. In addition, it offers the reader a perspective from many different points of view in the health care delivery system as well as in different parts of the world. This is the 3rd, and much expanded edition, of a text that was first published in 1989 (Lea and Fibiger). The second edition was published in 2006 (Paul Brookes) and has been used as a formal required text in training programs for physicians, nurses and nurse practitioners as well as by administrators who are responsible for programs serving people with IDD. This book is considered the "Bible" in the field of health care for people with IDD since 1989 when the first edition came out.

How can intra-organisational knowledge sharing be analysed and actualised? What should organisations be aware of before implementing knowledge management and sharing programmes? The overall objective of this book is neither to give precise answers nor to propose an exact action plan, but rather to discuss the phenomena of intra-organisational knowledge sharing in its 'complexity', shifting from a one-sided to a holistic view. The holistic approach relates to the contradictive reality of current knowledge management and knowledge sharing activities within organisations, taking up the challenge of analysing the internal process of knowledge sharing from three perspectives: social, economic and cultural. This methodical approach is a kind of 'reconstruction and re-combination', i.e. analysing and reflecting on existing literature sources, allocating them into theoretical

perspectives, studying them comprehensively and synthesising them in a holistic model. The diversity of such perspectives as economic, social and cultural undogmatically widens the debate across disciplines. The main result of this research is the developed holistic model for knowledge sharing within organisations, which reproduces a general guiding framework for organisations, enabling them to analyse and question their knowledge sharing process and structure.

Managerial Decision Making Lippincott Williams & Wilkins

We revive in this paper the empirical relevance of the competitive storage model by taking a holistic approach to food commodity prices. We augment the seminal Deaton and Laroque (1992, 1996) model by incorporating more comprehensive and realistic supply and demand factors: output and demand trends, shocks to the yield, and time-varying interest rates. While the computational burden increases exponentially, the augmented model succeeds in replicating all four key patterns of food commodity prices. Our simulation and comparative statics also show that (i) the long-run declining trend of food prices may come to a halt or even reverse due to the shifting balance between supply and demand; (ii) short-run price fluctuations are mainly attributable to sizeable, though low-probability, shocks to output such as inclement weather; and (iii) the impact of monetary policy, though small in normal times, is nonlinear and asymmetric, and can become large if the real rate passes a certain threshold.

The author of this book identifies the causes of African predicaments and gives solutions to the complicated challenges the continent faces. He shows how slavery and colonialism devastated the evolutionary development of the continent. Both slavery and colonialism had destroyed until hitherto existed forms of social organizations and division of labor. After political independence many African governments were pursued to implement free market economic policies. However, the different policies that have been applied for the past six decades could not wipe out the structural crises of the continent. Instead the different policies have deepened the social and the economic crises of the continent. After 50 years of political independence, many African countries are still exporters of raw materials and cash crops. Almost all African countries do not have an integrated market structure that is based on vast division of labor. The market sizes of many African countries are very narrow. To this day many African countries practice the so-called import substitution industrialization which cannot solve the continent's complex problems. After the author has examined the failure of the economic policies of the past six decades and their negative impacts he proposes that African countries must introduce a holistic program that effectively solves all the challenges that the continent faces. For that they must introduce political and institutional reforms. The author believes that without wide range political and institutional reforms and without changing the

mindset of the political and economic elite there cannot be any social and economic progress.

This book introduces a holistic approach to ship design and its optimisation for life-cycle operation. It deals with the scientific background of the adopted approach and the associated synthesis model, which follows modern computer aided engineering (CAE) procedures. It integrates techno-economic databases, calculation and multi-objective optimisation modules and s/w tools with a well-established Computer-Aided Design (CAD) platform, along with a Virtual Vessel Framework (VVF), which will allow virtual testing before the building phase of a new vessel. The resulting graphic user interface (GUI) and information exchange systems enable the exploration of the huge design space to a much larger extent and in less time than is currently possible, thus leading to new insights and promising new design alternatives. The book not only covers the various stages of the design of the main ship system, but also addresses relevant major onboard systems/components in terms of life-cycle performance to offer readers a better understanding of suitable outfitting details, which is a key aspect when it comes the outfitting-intensive products of international shipyards. The book disseminates results of the EU funded Horizon 2020 project HOLISHIP.

Patient-centered medicine is not an illness-centered, a physician-centered, or a hospital-centered medicine approach. In this book, it is aimed at presenting an approach to patient-centered medicine from the beginning of life to the end of life. As indicated by W. Osler, "It is much more important to know what sort of a patient has a disease than what sort of a disease a patient has." In our day, if the physicians and healthcare professionals could consider more than the diseased organ and provide healthcare by comforting the patients by respecting their values, beliefs, needs, and preferences; informing them and their relatives at every stage; and comforting the patients physically by controlling the pain and relieving their worries and fears, patients obeying the rules of physicians would become patients with high adaptation and participation to the treatment.

What is Digital Transformation, why is it so important and why do so many transformation projects fail? More importantly, what can we do to make our transformation initiative succeed? These are a few of the profound questions that we seek to answer in this book. The anomaly between the number of digital transformation being undertaken and the high failure rate may be due to not enough transformation initiatives taking a holistic approach that encompasses people, culture, organisations, processes, business strategy and objectives into the overall mix instead they are focusing largely on the technology. Therefore in this book we contemplate a holistic approach to digital transformation across the entire spectrum of the business from the perspective of an enterprise or manufacturer. Hence we start with people, culture and the need for agile business development when transforming processes, products and services or business models. We examine the how and why we align and tightly couple business objectives to transformation initiatives. Importantly, we examine the need for company-wide collaboration and integration of data, knowledge, processes and systems and the huge benefits initiatives such as data-democratization can deliver. Then we delve deeper into the specific drivers for successful transformation across a very broad range of business functions from the perspective of IT and Operations, Finance, HR, Sales &

Marketing, Manufacturing, Inventory, Supply chain and Post-sales service. We also examine how technology and processes such as the IoT and advanced data analysis have brought about Industry 4.0 and the Smart Factory not through technology upgrades and point solutions but through a holistic approach to digital transformation. A holistic approach to digital transformation, places people, culture, knowledge, capabilities, and decision-making as the pillars supporting the overall organisation's business strategy, objectives and mission values that are built upon a foundation of technology and processes. Successful digital transformation initiatives do not lose their focus on the overarching business strategy and company objectives being the goal, it's not about technology it is about creating new business value at the strategic level. This book develops a general theory of managerial decision making on the basis of a few elementary postulates. It employs logic as the method of reasoning, systems science in general and the systemic YoYo Model in particular, as the intuitive playground. By doing so, the authors take individually background-based guesswork out of processes of decision making. All established conclusions are expected to be generally employable in real-life applications. At the same time, the book is user friendly to a wide range of audience, coincides with people's intuition, and provides applicable results and insights for practical purposes.

The book presents a holistic approach to organization performance improvements by lessons learned management. Such an approach is required because specific methods, such as debriefing, task management or procedures updates, do not achieve actual improvements. The presented model spans the entire life cycle of lessons learned: Starting from creating new lessons, moving on to knowledge refining and ending with smart integration into the organizational environment so future re-use

of knowledge is enabled. The model also addresses other sources of organizational learning including quality processes and employee experience utilization.
