CLARENCE RIVERS

Postmodernism, Or, The Cultural Logic of Late Capitalism

Princeton University Press

"The Society of the Spectacle" by Guy Debord (translated by Ken Knabb). Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten—or yet undiscovered gems—of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously

edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

Architecture Cambridge University Press

A wide-ranging and challenging exploration of design and how it engages with the self The field of design has radically expanded. As a practice, design is no longer limited to the world of material objects but rather extends from carefully crafted individual styles and online identities to the surrounding galaxies of personal devices, new materials, interfaces, networks, systems, infrastructures, data, chemicals, organisms, and genetic codes. Superhumanity seeks to explore and challenge our understanding

of “design” by engaging with and departing from the concept of the “self.” This volume brings together more than fifty essays by leading scientists, artists, architects, designers, philosophers, historians, archaeologists, and anthropologists, originally disseminated online via e-flux Architecture between September 2016 and February 2017 on the invitation of the Third Istanbul Design Biennial. Probing the idea that we are and always have been continuously reshaped by the artifacts we shape, this book asks: Who designed the lives we live today? What are the forms of life we inhabit, and what new forms are currently being designed? Where are the sites, and what are the techniques, to design others? This vital and far-reaching collection of essays and images seeks to explore and reflect on the ways in which both the concept and practice of design are operative well beyond tangible objects, expanding into the depths of self and forms of life. Contributors: Zeynep Çelik Alexander, Lucia Allais, Shumon Basar, Ruha Benjamin, Franco “Bifo” Berardi, Daniel Birnbaum, Ina Blom, Benjamin H. Bratton, Giuliana Bruno, Tony Chakar, Mark Cousins, Simon Denny, Keller Easterling, Hu Fang, Rubén Gallo, Liam Gillick, Boris Groys, Rupali Gupte, Andrew Herscher, Tom Holert, Brooke Holmes, Francesca Hughes, Andrés Jaque, Lydia Kallipoliti, Thomas Keenan, Sylvia Lavin, Yongwoo Lee, Lesley Lokko, MAP Office, Chus Martínez, Ingo Niermann, Ahmet Ögüt, Trevor Paglen, Spyros Papapetros, Raqs Media Collective, Juliane Rebentisch, Sophia Roosth, Felicity D. Scott, Jack Self, Prasad Shetty, Hito Steyerl, Kali Stull, Pelin Tan, Alexander Tarakhovsky, Paulo Tavares, Stephan Trüby, Etienne Turpin, Sven-Olov Wallenstein, Eyal Weizman, Mabel O. Wilson, Brian Kuan Wood, Liam Young, and Arseny Zhilyaev.

From Prehistory to Climate Emergency Duke University Press
With the rise of science, we moderns believe, the world changed irrevocably, separating us forever from our primitive, premodern ancestors. But if we were to let go of this fond conviction, Bruno Latour asks, what would the world look like? His book, an anthropology of science, shows us how much of modernity is actually a matter of faith. What does it mean to be modern? What difference does the scientific method make? The difference, Latour explains, is in our careful distinctions between nature and society, between human and thing, distinctions that our benighted ancestors, in their world of alchemy, astrology, and phrenology, never made. But alongside this purifying practice that defines modernity, there exists another seemingly contrary one: the construction of systems that mix politics, science, technology, and nature. The ozone debate is such a hybrid, in Latour’s analysis, as are global warming, deforestation, even the idea of black holes. As these hybrids proliferate, the prospect of keeping nature and culture in their separate mental chambers becomes overwhelming—and rather than try, Latour suggests, we should rethink our distinctions, rethink the definition and constitution of modernity itself. His book offers a new explanation of science that finally recognizes the connections between nature and culture—and so, between our culture and others, past and present. Nothing short of a reworking of our mental landscape. We Have Never Been Modern blurs the boundaries among science, the humanities, and the social sciences to enhance understanding on all sides. A summation of the work of one of the most influential and provocative interpreters of science, it aims at saving what is good and valuable in modernity and replacing the

rest with a broader, fairer, and finer sense of possibility.

Conquest and Identity in Africa and the Mediterranean, 439-700 Amsterdam University Press

A major interpretation of the concepts of modernism and modernity. The concepts of modernity and modernism are amongst the most controversial and vigorously debated in contemporary philosophy and cultural theory. In this intervention, Fredric Jameson—perhaps the most influential and persuasive theorist of postmodernity—excavates and explores these notions in a fresh and illuminating manner. The extraordinary revival of discussions of modernity, as well as of new theories of artistic modernism, demands attention in its own right. It seems clear that the (provisional) disappearance of alternatives to capitalism plays its part in the universal attempt to revive 'modernity' as a social ideal. Yet the paradoxes of the concept illustrate its legitimate history and suggest some rules for avoiding its misuse as well. In this major interpretation of the problematic, Jameson concludes that both concepts are tainted, but nonetheless yield clues as to the nature of the phenomena they purported to theorize. His judicious and vigilant probing of both terms—which can probably not be banished at this late date—helps us clarify our present political and artistic situations.

Building-in-time Cambridge University Press

Analyses the biology, ecology and geographical distribution of lime trees, using extensive field data to clarify their notoriously confusing taxonomy.

Modern Architecture: A Critical History (World of Art) Harry N. Abrams

An extensively revised and updated edition of a bestselling

classic on modern architecture and its origins by Kenneth Frampton. Kenneth Frampton's highly acclaimed survey of modern architecture and its origins has been a classic since it first appeared in 1980. Starting with the cultural developments since 1750 that drove the modern movement, moving through the creation of modern architecture, and exploring the effects of globalization and the phenomenon of international celebrity architects, this book is the definitive history of modern architecture. For this extensively revised and updated fifth edition of *Modern Architecture*, Frampton added new chapters exploring the ongoing modernist tradition in architecture while also examining the varied responses to the urgent need to build more sustainably and create structures that will withstand changing climates. This new edition features completely redesigned interiors and an updated and expanded bibliography, making this volume more indispensable than ever.

Information Technology and Moral Philosophy Cambridge University Press

In all the arts a war is being waged between modernists and postmodernists. Radicals have tended to side with the modernists against the forces of conservatism. Postmodern Culture is a break with this tendency. Its contributors propose a postmodernism of resistance - an aesthetic that rejects hierarchy and celebrates diversity. Ranging from architecture, sculpture and painting to music, photography and film, this collection is now recognised as a seminal text on the postmodernism debate. The essays are by Hal Foster, Jürgen Habermas, Kenneth Frampton, Rosalind Krauss, Douglas Crimp, Craig Owens, Gregory L. Ulmer, Fredric Jameson, Jean Baudrillard, and Edward W. Said.

Essay on the Ontology of the Present Discontinued 3rd
 Fredric Jameson is regarded as one of the leading Marxist critics in the English-speaking world. The Cultural Turn is intended as a concise introduction to his theories on the postmodern world.
From Giotto to Alberti and Modern Oblivion Cambridge University Press

Architecture and Modern Literature explores the representation and interpretation of architectural space in modern literature from the early nineteenth century to the present, with the aim of showing how literary production and architectural construction are related as cultural forms in the historical context of modernity. In addressing this subject, it also examines the larger questions of the relation between literature and architecture and the extent to which these two arts define one another in the social and philosophical contexts of modernity. Architecture and Modern Literature will serve as a foundational introduction to the emerging interdisciplinary study of architecture and literature. David Spurr addresses a broad range of material, including literary, critical, and philosophical works in English, French, and German, and proposes a new historical and theoretical overview of this area, in which modern forms of "meaning" in architecture and literature are related to the discourses of being, dwelling, and homelessness.

The Signs of a Savant Pluto Press

Traces the genesis, consolidation and consequences of the postmodern idea. Beginning in the Hispanic world of the 1930s, the text takes the reader through to the 70s, when Lyotard and Habermas gave the idea of postmodernism wider currency and finally the 90s, with the work of Fredric Jameson.

Lime-trees and Basswoods Cambridge University Press

"Offers an intense scholarly experience in its comprehensiveness, its variety of voices and its formal organization... the editors took a risk, experimented and have delivered a much-needed resource that upends the status-quo." - Architectural Histories, journal of the European Architectural History Network "Architectural theory interweaves interdisciplinary understandings with different practices, intentions and ways of knowing. This handbook provides a lucid and comprehensive introduction to this challenging and shifting terrain, and will be of great interest to students, academics and practitioners alike." - Professor Iain Borden, UCL Bartlett School of Architecture "In this collection, architectural theory expands outward to interact with adjacent discourses such as sustainability, conservation, spatial practices, virtual technologies, and more. We have in The Handbook of Architectural Theory an example of the extreme generosity of architectural theory. It is a volume that designers and scholars of many stripes will welcome." - K. Michael Hays, Eliot Noyes Professor of Architectural Theory, Harvard University The SAGE Handbook of Architectural Theory documents and builds upon the most innovative developments in architectural theory over the last two decades. Bringing into dialogue a range of geographically, institutionally and historically competing positions, it examines and explores parallel debates in related fields. The book is divided into eight sections:
 Power/Difference/Embodiment Aesthetics/Pleasure/Excess
 Nation/World/Spectacle History/Memory/Tradition
 Design/Production/Practice Science/Technology/Virtuality
 Nature/Ecology/Sustainability City/Metropolis/Territory. Creating

openings for future lines of inquiry and establishing the basis for new directions for education, research and practice, the book is organized around specific case studies to provide a critical, interpretive and speculative enquiry into the relevant debates in architectural theory.

Traces the development of architecture from Stonehenge to the new AT&T Building in New York and looks at important movements, architects, and buildings

Architecture, from Prehistory to Post-modernism Oxford University Press

Bridges the gap between the history and theory of twentieth-century architecture and cultural theories of modernity. In this exploration of the relationship between modernity, dwelling, and architecture, Hilde Heynen attempts to bridge the gap between the discourse of the modern movement and cultural theories of modernity. On one hand, she discusses architecture from the perspective of critical theory, and on the other, she modifies positions within critical theory by linking them with architecture. She assesses architecture as a cultural field that structures daily life and that embodies major contradictions inherent in modernity, arguing that architecture nonetheless has a certain capacity to adopt a critical stance vis-à-vis modernity. Besides presenting a theoretical discussion of the relation between architecture, modernity, and dwelling, the book provides architectural students with an introduction to the discourse of

critical theory. The subchapters on Walter Benjamin, Ernst Bloch, Theodor Adorno, and the Venice School (Tafuri, Dal Co, Cacciari) can be studied independently for this purpose.

Design of the Self SAGE

"A Genealogy of Modern Architecture" is a reference work on modern architecture by Kenneth Frampton, one of today's leading architectural theorists. Conceived as a genealogy of twentieth century architecture from 1924 to 2000, it compiles some sixteen comparative analyses of canonical modern buildings ranging from exhibition pavilions and private houses to office buildings and various kinds of public institutions. The buildings are compared in terms of their hierarchical spatial order, circulation structure and referential details. The analyses are organized so as to show what is similar and different between two paired types, thus revealing how modern tradition has been diversely inflected. Richly illustrated, "A Genealogy of Modern Architecture" is a new standard work in architectural education.

Synchronization in Wireless Sensor Networks Prentice Hall

Moving back and forth between the long shot on historical trends and close-ups on major works and crucial architectural themes, this insightful, lively and original analysis also accepts the conventional period and thematic structures of architectural history and the canon of great buildings. Designed to help readers understand and appreciate what great architecture is in its full dimensions of use, structure and aesthetic qualities as well as its history, this lavishly illustrated book explains specific qualities of each period and the often-complex illuminating differences between the periods. This comprehensive volume examines all aspects of architectural history from the Ancient

world, the Middle Ages, the Renaissance and Baroque periods through the modern world. For historians and architectural enthusiasts.

The Origins of Postmodernity Prentice Hall

From its beginnings, philosophy's language, concepts and imaginative growth have been heavily influenced by poetry and poets. Drawing on the work of a wide range of thinkers throughout the history of Western philosophy, Raymond Barfield explores the pervasiveness of poetry's impact on philosophy and, conversely, how philosophy has sometimes resisted or denied poetry's influence. Although some thinkers, like Giambattista Vico and Nietzsche, praised the wisdom of poets, and saw poetry and philosophy as mutually beneficial pursuits, others resented, diminished or eliminated the importance of poetry in philosophy. Beginning with the famous passage in Plato's Republic in which Socrates exiles the poets from the city, this book traces the history of the ancient quarrel between philosophy and poetry through the works of thinkers in the Western tradition ranging from Plato to the work of the contemporary thinker Mikhail Bakhtin.

The Work of Gordon Matta-Clark Verso Books

A groundbreaking history of architecture told through the relationship between buildings and energy The story of architecture is the story of humanity. The buildings we live in, from the humblest pre-historic huts to today's skyscrapers, reveal our priorities and ambitions, our family structures and power structures. And to an extent never explored until now, architecture has been shaped in every era by our access to energy, from fire to farming to fossil fuels. In this ground-

breaking history of world architecture, Barnabas Calder takes us on a dazzling tour of some of the most astonishing buildings of the past fifteen thousand years, from Uruk, via Ancient Rome and Victorian Liverpool, to China's booming megacities. He reveals how every building - from the Parthenon to the Great Mosque of Damascus to a typical Georgian house - was influenced by the energy available to its architects, and why this matters. Today architecture consumes so much energy that 40% of the world's greenhouse gas emissions come from the construction and running of buildings. If we are to avoid catastrophic climate change then now, more than ever, we need beautiful but also intelligent architecture, and to retrofit - not demolish - the buildings we already have.

Sacred Power, Sacred Space Cambridge University Press

Proceedings of a symposium, held as a satellite meeting of the Second World Congress of Neuroscience, at the University of Bremen in August 1987. An overview of lesion-induced neural plasticity in such areas as the spinal cord; vestibular, oculomotor, visual, and olfactory systems; the cerebellum; and the cerebral cortex. Many diagrams, charts, and illustrations. Some implications for the general understanding of neural plasticity are discussed. The title essay was published in 1984 in *New Left Review*, and a number of the other essays presented here also appeared in previous publications, sometimes in an earlier form. Jameson (comparative literature, Duke.) evaluates the concept of postmodernism and surveys developments in a wide range of fields--market ideology, architecture, painting, installment art, film, video art, literature. Annotation copyrighted by Book News, Inc., Portland, OR

The Cambridge History of Postmodern Literature Architecture, from Prehistory to Post-modernism The Western Tradition Reissued in the Cambridge Mathematical Library this classic book outlines the theory of thermodynamic formalism which was developed to describe the properties of certain physical systems consisting of a large number of subunits. It is aimed at mathematicians interested in ergodic theory, topological dynamics, constructive quantum field theory, the study of certain differentiable dynamical systems, notably Anosov

diffeomorphisms and flows. It is also of interest to theoretical physicists concerned with the conceptual basis of equilibrium statistical mechanics. The level of the presentation is generally advanced, the objective being to provide an efficient research tool and a text for use in graduate teaching. Background material on mathematics has been collected in appendices to help the reader. Extra material is given in the form of updates of problems that were open at the original time of writing and as a new preface specially written for this new edition by the author.
