 Das satirische Porträt von nichts weniger als der gesamten modernen Welt - einer der wichtigsten Romane des 20. Jahrhunderts! Wyatt Gwyon wächst als Priestersohn unter der rigiden Obhut seiner Tante in der Provinz Neuenglands auf und entwickelt ein zeichnerisches Talent. Schließlich landet er Ende der vierziger Jahre im New Yorker Greenwich Village, wo er aus Not zu einem genialen Kunstfälscher wird. Doch er kopiert nicht etwa die alten Meister, sondern erfindet neue "Originale" und arbeitet damit korrupten Händlern und Hehlern in die Hände. Um ihn herum gibt es ein ganzes Heer an Künstlern, Kunstexperten, Schriftstellern, Geistlichen, Forschern und Politikern, die sich alle in einem Netz aus Lügen an der Fälschung der Welt beteiligen. Mit diesem sprachgewaltigen, amüsant und wild wuchernden Epos, das 1955 in den USA erschien, ist William Gaddis ein großer Wurf gelungen, ein Zeitroman über eine bodenlose, auf Lug, Trug und Schein aufgebaute Welt, ein Paukenschlag von einem Buch, das zu den bedeutendsten Meisterwerken der Literatur zählt und als Schlüsselroman der Moderne gilt.

 In *The Death and Life of Great American Cities* durchleuchtet Jane Jacobs 1961 die fragwürdigen Methoden der Stadtplanung und Stadtsanierung in Amerika, der "New Yorker" nannte es das unkonventionellste und provozierendste Buch über Städtebau seit langem. Die deutsche Ausgabe wurde schnell auch im deutschsprachigen Raum zu einer viel gelesenen und diskutierten Lektüre. Sie ist jetzt wieder in einem Nachdruck zugänglich, mit einem Vorwort von Gerd Albers (1993), das nach der Aktualität dieser Streitschrift fragt.

 New York Times and USA Today bestselling author Michael Prescott delivers a haunting story of fate, obsession, and murder in *Comes the Dark*. Erica Garrison has long suspected her brother Robert of a terrible crime, but she has never sought proof, afraid of what she might find—until today. Now, in the secret underground caverns below the rural town of Barrow, Pennsylvania, she searches for the site of the childhood games she and Robert played—games that may have sparked a homicidal fascination that grips him to this day. And all the while her brother, and her past, are inexorably closing in ... "A harrowing thriller of the first order. [Prescott's] character are flesh-and-blood real, the atmosphere's intense, and the plot races along unceasingly." —Jeffery Deaver

This book explores how a long-term innovation can take place based on historical analyses of the development of reverse osmosis (RO) membrane from the early 1950s to the mid-2010s. The RO membrane is a critical material for desalination that is a key to solve water shortages becoming serious in many places of the world. The authors conducted in-depth field studies as well as analyses of rich archival data to demonstrate how researchers, engineers, managers, entrepreneurs, and policymakers interacted each other for this material innovation to be realized. A series of historical analyses in this book uncovered that initial government supports, strategic niche markets, emergence of breakthrough technology, and company-specific rationales played significant roles for companies to overcome four types of uncertainty, technological, market, competition, and social/organizational ones, and enabled the companies to persistently invest in the development and commercialization of the RO membrane. This book depicts that innovation does not arise on a sudden, but that it is actualized through long lasting process with turns and twists, which is driven by many non-economic rationales beyond economic motives.

The Brown Boveri Scientific Symposia by now are part of a firmly established tradition. This is the tenth event in a series which was initiated shortly after Corporate Research was created as a separate entity in our company; the symposia are held every other year. The themes have been: 1969 Flow Research on Blading 1971 Real-Time Control of Electric Power Systems 1973 High-Temperature Materials in Gas Turbines 1975 Nonemissive Electrooptic Displays 1977 Current Interruption in High-Voltage Networks 1979 Surges in High-Voltage Networks 1981 Semiconductor Devices for Power Conditioning 1983 Corrosion in Power Generating Equipment 1985 Computer Systems for Process Control 1987 Process Technologies for Water Treatment The tenth event in an uninterrupted series that by now goes back almost 20 years is a good opportunity to make a few remarks on the guiding rules that have governed our symposia. Why have we chosen these titles? At the outset we established certain selection criteria; we felt that a subject for a symposium should fulfill the following three requirements: It should characterize a part of an established discipline; in other words, it should describe an area of scholarly study and research. It should be of current interest in the sense that important results have recently been obtained and considerable research is still being undertaken in the world's scientific community. It should bear some relation to the scientific and technological activity of the company.

December 2, 2004, started out like any other day for Gary Tim Collins. As a University of Toledo alumnus, Gary was looking forward to the Mid-American Conference championship game at Ford Field against the University of Miami with his friends. But he wouldn't see or remember the game. Just as he was about to sit down to enjoy the game, he was struck with seizures that landed him in Henry Ford's Intensive Care Unit in a coma for two weeks. It was the prayers of friends and loved ones that helped bring him back. This traumatic experience brought Gary closer to God, when he had previously struggled with finding his purpose and really felt God had something else in mind for him. That something else turned out to be this book, *The Light That Illuminates the Flame*. In this book, Gary explores common themes of Christianity, like who God is, what he does in our lives, the importance of his Word, the life of Jesus Christ, and, in turn, the way we should live our lives as his faithful followers to draw near to him. It is a thank you to the Almighty God who gave all and saved a man from losing it all. Marty Pennington Lead Pastor Mainstreet Church Walbridge, Ohio. Gary Tim Collins taught for over twenty-four years in the Toledo public school system, working with handicapped and disadvantaged high school students. He lives in Ohio and is actively involved in his church. This is his first book. This is a book that would be good for any growing Christian to read. Gary takes much of his personal life experiences and puts them into layman's terms so that all can learn and grow. As you, like all of us, struggle with life's issues, this book will certainly help you work with your own struggles as well as prepare you to help others on their journey of life. Terry R. Smith Congregational Care Pastor, Mainstreet Church

"This wide-ranging collection of essays re-opens the connection between science fiction and the increasingly science-fictional world. Kevin Alexander Boon reminds us of the degree to which the epistemology of science fiction infects modern political discourse. Károly Pintér explores the narrative structures of utopian estrangement, and Tamás Bényei and Brian Attebery take us deeper into the cultural exchanges between science fiction and the literary and political worlds. In the second half, Donald Morse, Nicholas Ruddick and Éva Federmayer look at the way in which science fiction has tackled major ethical issues, while Amy Novak and Kálmán Matolcsy consider memory and evolution as cultural batteries. The book ends with important discussions of East German and Hungarian science fiction by Usch Kiausch and Donald Morse respectively. I envisage that the book will find a market both among academics and as a recommended text to undergraduates as it offers interesting essays on important readers. The tendency for science fiction to be offered as a literature class to science majors is not usually considered, but this book would be particularly appropriate for such a market." Dr. Farah Mendelsohn, Middlesex University
