CHERRY COOK

Recruitment of Family Caregivers for Qualitative Research Participation Lippincott Williams & Wilkins
 « Caring for the Vulnerable Perspectives in Nursing Theory, Practice, and Research, Fourth Edition explores vulnerability from the perspective of individuals, groups, communities, and populations. The text specifically addresses how vulnerability affects the field of nursing and its care givers and focuses on how to work with these populations. Written from a global perspective, the Fourth Edition provides an overview of treatments and issues as well presents a basic structure for caring for the vulnerable with the ultimate goal of providing culturally competent care. »--
Kielhofner's Research in Occupational Therapy National Academies Press
 Advances in research and the treatment of cancer mean that more patients and their carers are asking healthcare professionals about the latest treatments and how they may be of benefit. It is essential that staff working with cancer patients understand fully how these new treatments work in order to disseminate timely and appropriate information to patients. The application of biology to the delivery of cancer care is playing an ever-increasing role in the management of these diseases. The Biology of Cancer: Second Edition provides details of the most recent developments in cancer care and is divided into three sections: Understanding Cancer – examines predisposing factors to developing cancer, diagnosis and its implications on the individual and society. The Science of Cancer – a closer look at the cell, genetics, the immune system, tumour markers and

monoclonal antibodies. Research and Treatment – exploring translational oncology, applying research methodology to cancer research and research ethics relating to cancer. This fully updated edition also looks at evidence-based research that can be translated directly to patient care and gives details recent developments. Written by experienced, practicing healthcare professionals, The Biology of Cancer: Second Edition can easily be applied to patient care. It is an informative text for students, newly qualified nurses and practising oncology/palliative care nurses.

Commerce Business Daily John Wiley & Sons

Fifteen to twenty years is how long it takes for the billions of dollars of health-related research to translate into evidence-based policies and programs suitable for public use. Over the past 15 years, an exciting science has emerged that seeks to narrow the gap between the discovery of new knowledge and its application in public health, mental health, and health care settings. Dissemination and implementation (D & I) research seeks to understand how to best apply scientific advances in the real world, by focusing on pushing the evidence-based knowledge base out into routine use. To help propel this crucial field forward, leading D & I scholars and researchers have collaborated to put together this volume to address a number of key issues, including : how to evaluate the evidence base on effective interventions; which strategies will produce the greatest impact; how to design an appropriate study; and how to track a set of essential outcomes. D & I studies must also take into account the barriers to uptake of evidence-based interventions in the communities where people live their lives and the social service agencies, hospitals, and clinics where they receive care. The challenges of moving research to practice and policy are universal, and future progress calls for collaborative partnerships and cross-country research. The fundamental tenet of D & I research--taking what we know about improving health and putting it into practice--must be the highest

priority. This book is nothing less than a roadmap that will have broad appeal to researchers and practitioners across many disciplines. [Ed.].

The Nation's Investment in Cancer Research Pearson

Breast cancer remains the most common invasive cancer among women. The primary patients of breast cancer are adult women who are approaching or have reached menopause; 90 percent of new cases in U.S. women in 2009 were diagnosed at age 45 or older. Growing knowledge of the complexity of breast cancer stimulated a transition in breast cancer research toward elucidating how external factors may influence the etiology of breast cancer. *Breast Cancer and the Environment* reviews the current evidence on a selection of environmental risk factors for breast cancer, considers gene-environment interactions in breast cancer, and explores evidence-based actions that might reduce the risk of breast cancer. The book also recommends further integrative research into the elements of the biology of breast development and carcinogenesis, including the influence of exposure to a variety of environmental factors during potential windows of susceptibility during the full life course, potential interventions to reduce risk, and better tools for assessing the carcinogenicity of environmental factors. For a limited set of risk factors, evidence suggests that action can be taken in ways that may reduce risk for breast cancer for many women: avoiding unnecessary medical radiation throughout life, avoiding the use of some forms of postmenopausal hormone therapy, avoiding smoking, limiting alcohol consumption, increasing physical activity, and minimizing weight gain. *Breast Cancer and the Environment* sets a direction and a focus for future research efforts. The book will be of special interest to medical researchers, patient advocacy groups, and public health professionals.

Research methods in palliative care John Wiley & Sons

In the late 1980s, the National Cancer Institute initiated an investigation of cancer risks in populations near 52 commercial nuclear power plants and 10 Department of Energy nuclear facilities (including research and nuclear weapons production facilities and one reprocessing plant) in the United States. The results of the NCI investigation were used a primary resource for communicating with the public about the cancer risks near the nuclear facilities. However, this study is now over 20 years old. The U.S. Nuclear Regulatory Commission requested that the National Academy of Sciences provide an updated assessment of cancer risks in populations near USNRC-licensed nuclear facilities that utilize or process uranium for the production of electricity. Analysis of Cancer Risks in Populations near Nuclear Facilities: Phase 1 focuses on identifying scientifically sound approaches for carrying out an assessment of cancer risks associated with living near a nuclear facility, judgments about the strengths and weaknesses of various statistical power, ability to assess potential confounding factors, possible biases, and required effort. The results from this Phase 1 study will be used to inform the design of cancer risk assessment, which will be carried out in Phase 2. This report is beneficial for the general public, communities near nuclear facilities, stakeholders, healthcare providers, policy makers, state and local officials, community leaders, and the media.

[A Review of the Department of Defense's Program for Breast Cancer Research](#) World Health Organization

This unique textbook integrates statistical concepts into evidence-based clinical practice and patient management. Research concepts and techniques are drawn from epidemiology, bio-statistics, and psychometrics, as well as educational and social science research. Clinical examples throughout the text illustrate practical and scientifically sound applications of the concepts. Data tables and research vignettes highlight statistical distributions involving probability. Methods to locate and utilize web-based information relevant to clinical research are discussed, and web URLs are provided. Further learning is encouraged by the inclusion of suggested activities, recommended readings, references, and a comprehensive glossary of research terms. Additional resources are available at a Connection Website, connection.LWW.com/go/stommel.

Cancer Treatment Reports Oxford University Press

According to current statistical data, one in eight women will be diagnosed with breast cancer. The five-year survival rate for breast cancer patients has improved in recent years, but the overall mortality rates have changed little. In 1993 Congress allocated \$210 million for breast cancer research as part of the Department of Defense budget. An Institute of Medicine (IOM) committee was convened at that time to advise the U.S. Army Medical Research and Development Command on strategies for managing a breast cancer research program. This book evaluates the program's management and achievements to date. Although it is too early to evaluate the program in terms of breakthrough results and new insights produced by the funded projects or investigators, this book documents the process used to select research proposals for funding and analyzes the portfolio of funded projects in terms of their responsiveness to the recommendations and fundamental questions articulated in the 1993 IOM report.

Canadian Essentials of Nursing Research Springer Science & Business Media

The overall aim of our research proposal is the statistical nonparametric inference of the redistribution-to-the-center estimator (RTCH) and the generalized maximum likelihood estimator (GMLE) for the survival function of a time-to-event variable that is subject to interval censoring. The RTCH, which is proposed by us, has a closed-form expression and is equal to the GMLE under a homogeneous condition. The GMLH is the standard optimal estimator in survival analysis. However, it cannot be expressed in a closed-form expression, and asymptotic distribution theory for it has been limited. From the asymptotic study of the RTCE, we have gained important insight into proofs of asymptotic properties of the GMTE. In the past four years we have established consistency, asymptotic normality and asymptotic efficiency of the GMLE under a variety of conditions. In addition, we have derived an asymptotic nonparametric two-sample distance test procedure for comparing two populations. Finally, we have begun investigating the asymptotic inference of Cox regression model for interval-censored data by establishing consistency and asymptotic normality of the %GMLE of the regression parameters under some finite assumptions. These preliminary results are being applied to a breast cancer prognostic relapse follow-up study.

Topics in Anti-Cancer Research Bentham Science Publishers

This book describes the principles around which cancer research and clinical trials can be developed. Additionally, by describing the particularities of planning and implementing cancer research in developing countries, this book provides valuable practical information for researchers in resource-rich countries who contemplate cooperating with scientists from limited-resource countries in performing research. Written and edited by leaders in the field who work in these developing countries, *Cancer Research and Clinical Trials in Developing Countries: A Practical Guide* will appeal to a wide range of researchers, students, and physicians who are engaging in cancer research and clinical trials. It focuses on methodology and statistics while structured around the needs of cancer research. It provides valuable information regarding international collaboration, funding mechanisms as well as publishing and dissemination of research findings.

Journal of the National Cancer Institute OUP Oxford

Are you new to research and daunted by the idea of constructing your own research proposal? Then this is the book you need! This book and accompanying web resource will answer all your questions about healthcare research by introducing you to the concepts, theories and practicalities surrounding it. The aim of both the book and the web resource is to help you to write a good healthcare research proposal - which is the starting point for any would-be student researcher. The book takes a look at the theory of research, the core of the topic, but also provides practical help and advice along the way. It takes the reader through the stages of the research process from developing the question to communicating the findings, demystifying the process on the way. The web resource works alongside the book, supplementing and expanding on the chapters, giving you the ability to prepare your very own research proposal. Explains key concepts in a clear, easy to understand way Includes activities and scenarios for you to work through which will also increase your understanding of research and research proposals Easily navigable web resource (www.researchproposalsforhealthprofessionals.com) Both book and website are arranged in the same order in which you would develop and write a research proposal Website includes downloadable research proposal template to complete step-by-step as you work through the book and web resource

The Professor Is In Nova Publishers

Within an expanding field of study in both undergraduate and graduate nursing curricula, this Third Edition explores vulnerability from the perspective of individuals, groups, communities, and populations while addressing how vulnerability affects nurses, nursing, and nursing care. This new edition presents a basic structure for caring for the vulnerable with the ultimate goal of providing culturally competent care. Theoretical and research chapters progress towards others offering meaningful learning experiences for both nursing students and practitioners. Further, since nurses are the crucial link between those who are vulnerable and those with access to solutions, this text provides ideas for how nurses might advocate for the vulnerable on a policy level. Written specifically for nurses by nurses, this Third Edition is a timely and necessary response to the culturally diverse, vulnerable populations for whom nurses must provide appropriate and precise care.

Clinical Research Jones & Bartlett Publishers

With an international team of expert contributors, Renee Taylor carries on Gary Kielhofner's innovative work in the 2nd Edition of his comprehensive research methodologies text. This guide bridges the gap between theorists and practitioners. It focuses on the relevance and logic of research to provide a practical, demystified approach to conducting applied research in the field for graduate students and clinicians. You'll begin with an introduction to the nature and scope of research and its place in OT and then explore research designs, measurements, and statistical analysis for qualitative, quantitative, and mixed studies. You'll examine the steps and procedures required to conduct research and how research can be used to shape professional practice and improve patient care.

[Book Alone](#) Elsevier Health Sciences

This is the second volume of the Patent eBook Series titled Topics in Anti-Cancer Research. The eBook includes updated chapters on topics relevant to contemporary cancer research published in the journal, Recent Patents on Anti-Cancer Drug Discovery. This volume covers scientific and patented novel chemotherapeutic agents and drugs for metastatic castration-resistant prostate cancer and Ras/ Raf /MEK/ERK pathway, P1K, AKT and mTORC1/2 inhibitors, ATPase inhibitors for cancer therapy, and sphingomyelin biosynthesis which regulates cancer cell death and growth. Other chapters also explain research on biochemical regulation i.e. cell cycle and energy metabolism, the role of genetic variations of FcγRs gamma receptors in monoclonal antibody based anti-cancer therapy and effectiveness of antiangiogenic therapy, endogenous angiogenesis inhibitors and anti-angiogenic drugs for the treatment of renal cell carcinoma, prevention of cancer by ribonucleotide reductase, anticancer activity of Erlotinib in glioblastoma and the mechanisms of action of nanodrugs and nano-sized camptothecin drugs in cancer chemotherapy. The volume also covers recent studies in the field of onconutrition. The broad range of topics covered in this second volume will be of immense interest to clinicians, scientists and R&D experts seeking new targets for the prevention of cancer, novel oncogenic biomarkers, and methods for cancer therapy.

"Making an effective bid outlines everything you need to know for writing successful bids and tenders.

Statistical Methods for Analyzing Time-Dependent Events in Breast Cancer Chemoprevention Studies F.A. Davis

Based on the authors experience in working with nursing faculty and students at the University of North Carolina at Chapel Hill, and in teaching seminars and workshops throughout the United States, this guide can help nurses communicate their research to colleagues in education, research, and practice.

[Experience Research Social Change](#) National Academies Press

Palliative and end of life care are concerned with the physical, social, psychological and spiritual care of people with advanced disease. It currently has a poorly developed research base, but the need to improve this is increasingly recognised. One of the reasons for the lack of research - and the variable quality of the research that is undertaken - is the difficulty of conducting research with very ill and bereaved people. Standard and well-established research methods may need to be adapted to work in this context. This means that existing research methods textbooks may be of limited use to palliative care practitioners seeking to do research for the first time, or to more experienced researchers wanting to apply their

knowledge in palliative care settings. This research methods textbook is the first to be written specifically for palliative care. It has been edited by four experienced palliative care academics with acknowledged expertise and international reputations in this field. It encompasses methods used in both clinical and health services research in palliative care, with sections on clinical, epidemiological, survey and qualitative research, as well as a section covering skills needed in any research project. Each chapter provides readers with an up to date overview of the research method in question, an understanding of its applicability to palliative care and of the particular challenges of using it in this setting. It is essential reading for all palliative care researchers.

Dissemination and Implementation Research in Health Radcliffe Publishing

Cervical cancer is a malignancy of the cervix. Worldwide, it is the second most common cancer of women. It may be present with vaginal bleeding but symptoms may be absent until the cancer is in advanced stages, which has made cervical cancer the focus of intense screening efforts. Most scientific studies point to human papillomavirus (HPV) infection responsible for 90 per cent of the cases of cervical cancer. There are 7 most common types of HPV - 16, 18, 31, 33, 42, 52 and 58. Types 16 and 18 being the most common cause of the cancer. Treatment is with surgery (including local excision) in early stages and chemotherapy and radiotherapy in advanced stages of the disease. This new book presents important research in the

field from around the globe.

An Interim Care Facility for Cancer Patients The Nation's Investment in Cancer Research Dissemination and Implementation Research in Health Oxford University Press

Analysis of Cancer Risks in Populations Near Nuclear Facilities F.A. Davis

This book addresses a wide range of topics, from the principles of evidence-based practice to the process and dissemination of research to unique considerations such as clinical trials, patenting, and health services research. The case for evidence-based practice and a collaborative research culture is made first, followed by a series of chapters walking the reader through the research process by way of the scientific method. One of the more unique aspects of the scope of this book is the inclusion of chapters relating to the dissemination of knowledge, manuscript publication, and how to build an academic research program. Each chapter focuses on introducing the reader to foundational principles, methodology, and terminology, and highlight case studies of radiation therapist research or experience that is relevant to provide contextual examples and inspiration to the reader.
