## HARVEY MACIAS

---

**Local Public, Fiscal and Financial  
Governance** Cambridge University  
Press

The volume is a unique attempt to explore the relationship between two of the most interesting contemporary schools of thought evolving at the interface between social science and social philosophy: The Austrian tradition of F A Hayek and Ludwig von Mises, and the Bloomington tradition of Elinor Ostrom and Vincent Ostrom.

A Maritime Perspective Routledge  
The Levels of Action

*Governing Climate Change* Polycentricity  
and Local Public Economies Readings  
from the Workshop in Political Theory  
and Policy Analysis

Global Commons: Issues, Concerns and Strategies presents a comprehensive international perspective on the global commons—natural resource domains that are not subject to national jurisdictions and are accessible to all nations. These include the oceans, atmosphere and outer space, and specific locations such as Antarctica. Due to their critical importance in maintaining human lives and livelihoods, and their vulnerability to depletion, the collaborative preservation of the global commons is of great relevance to all human communities. Leading world powers, such as France, are increasingly

adopting environmental policies as key to their functioning as democracies. After the Paris Climate Conference, there has been a spurt in cooperation between major nations, such as France and India, in the fight against climate change. This book provides exhaustive coverage of all the major facets of preservation of the global commons. It will, therefore, prove indispensable to all stakeholders in a new, just and sustainable world order. Readings from the Workshop in Political Theory and Policy Analysis Lexington Books

This book is open access under a CC BY 4.0 license. Rethinking the ways global history is envisioned and conceptualized in diverse countries such as China, Japan, Mexico or Spain, this collection considers how global issues are connected with our local and national communities. It examines how the discipline had evolved in various historiographies, from Anglo Saxon to southern European, and its emergence in Asia with the rapid development of the Chinese economy motivation to legitimate the current uniqueness of the history and economy of the nation. It contributes to the revitalization of the field of global history in Chinese historiography, which have been dominated by national narratives and promotes a debate to open new venues in which important features such as scholarly mobility, diversity and internationalization are firmly rooted, putting aside national specificities. Dealing with new approaches on the use of empirical data by framing the proper questions and hypotheses and

connecting western and eastern sources, this text opens a new forum of discussion on how global history has penetrated in western and eastern historiographies, moving the pivotal axis of analysis from national perspectives to open new venues of global history.

**Essays in Polycentricity** University of Michigan Press

Institutions are the formal or informal 'rules of the game' that facilitate economic, social, and political interactions. These include such things as legal rules, property rights, constitutions, political structures, and norms and customs. The main theoretical insights from Austrian economics regarding private property rights and prices, entrepreneurship, and spontaneous order mechanisms play a key role in advancing institutional economics. The Austrian economics framework provides an understanding for which institutions matter for growth, how they matter, and how they emerge and can change over time. Specifically, Austrians have contributed significantly to the areas of institutional stickiness and informal institutions, self-governance and self-enforcing contracts, institutional entrepreneurship, and the political infrastructure for development.

An Intellectual Biography Routledge  
Contains eight conference papers and three previously unpublished papers by Ostrom--P. ix.

Elinor Ostrom and the Bloomington School of Political Economy Cambridge University Press

This book explains why governance is polycentric and what that means in practice, using examples of complex natural resource management.

Analyzing and Applying Polycentricity Edward Elgar Publishing

Analyses European Union governance

from the perspective of polycentric theory, aimed at improvements in achieving individual self-governance.

**A Modern Survey of the Austrian Contribution to the Economic**

**Analysis of Institutions** Routledge  
Challenging Institutional Analysis and Development demonstrates the importance of one of the 2009 Nobel Prize in Economics winners Elinor Ostrom's research program. The Bloomington School has become one of the most dynamic, well recognized and productive centers of the New Institutional Theory movement. Its ascendancy is considered to be the result of a unique and extremely successful combination of interdisciplinary theoretical approaches and hard-nosed empiricism. This book demonstrates that the well-known interdisciplinary and empirical agenda of the Bloomington Research Program is the result of a less-known but very bold proposition: an attempt to revitalize and extend into the new millennium a traditional mode of analysis illustrated by authors like Locke, Montesquieu, Hume, Adam Smith, Hamilton, Madison and Tocqueville. As such, the School tries to synthesize the traditional perspectives with the contemporary developments in social sciences and thus to re-ignite the old approach in the new intellectual and political context of the twentieth century. The book presents an outline and a systematic analysis of the vision behind the Bloomington Research Program in Institutional Analysis and Development, explaining its basic assumptions and its main themes as well as the foundational philosophy that frames its research questions and theoretical and methodological approaches. This book will be of interest to students and

scholars of social science, especially those in the fields of economics, political sciences, sociology and public administration.

*Polycentricity in the European Union*

University of Michigan Press

The author argues for the virtues of diversity in cities, organizations, strategies for development, and human discourse in general. The opening chapter develops the vision of Jane Jacobs (the "diva of diversity") for the development of city regions. Many of the later chapters are based on the author's ten years in the World Bank and Senior Advisor and speechwriter for Joseph Stiglitz. Many of the problems in the World Bank's policies were based on a narrow ideological vision that did not tolerate a diversity of pragmatic approaches to the complex questions of economic and social development. Finally, the narrow social-engineering criterion for evaluating social projects is cost-benefit analysis, and the penultimate chapter develops a logical fallacy in the Kaldor-Hicks Principle that is the theoretical basis for cost-benefit analysis.

**Global History and New Polycentric Approaches**

Rowman & Littlefield

This state-of-the-art critical 'development' reader examines the inter-relationships between globalisation, poverty and conflict. It complements current debates in the field of development studies and, in an era in which development fatigue seems to have become more profound than ever before, it brings the importance of development once again to the forefront. The contributions represent current thinking on (and practice of) development policy, poverty reduction, the need for multi-level democratic institutions, and the containing and

prevention of conflicts.

**Governing Complexity** University of Michigan Press

This is the first book combining research on the Global Environment, Catastrophic Risks and Economic Theory and Policy.

Modern economic theory originated in the middle of the twentieth century when industrial expansion coupled with population growth led to a voracious use of natural resources and global environmental concerns. It is uncontested that, for the first time in recorded history, humans dominate the planet, changing the planet's atmosphere, its bodies of water, and the complex web of species that makes life on earth. This radical change in circumstances led to rethinking of the foundations of human organization and, in particular, the industrial economy and the economic theory behind it. This book brings together new approaches on multiple levels: environmental sustainability requires rethinking in terms of economic theory and policy as well as the considerations of catastrophic risk and extremal events. Leading experts address questions of economic governance, risk management, policy decision making and distribution across time and space.

*Polycentric Games and Institutions*

Cambridge University Press

Climate change governance is in a state of enormous flux. New and more dynamic forms of governing are appearing around the international climate regime centred on the United Nations Framework Convention on Climate Change (UNFCCC). They appear to be emerging spontaneously from the bottom up, producing a more dispersed pattern of governing, which Nobel Laureate Elinor Ostrom famously described as 'polycentric'. This book

brings together contributions from some of the world's foremost experts to provide the first systematic test of the ability of polycentric thinking to explain and enhance societal attempts to govern climate change. It is ideal for researchers in public policy, international relations, environmental science, environmental management, politics, law and public administration. It will also be useful on advanced courses in climate policy and governance, and for practitioners seeking incisive summaries of developments in particular sub-areas and sectors. This title is also available as Open Access on Cambridge Core.

**Rational Decision-Making within the Bounds of Reason** Springer Nature  
Uses game theory to model institutions  
**Political Economy Foundations**  
Routledge

This book provides a comprehensive treatment of traditional as well as newer topics in local public, fiscal and financial management principles and practices. It covers traditional topics of local public management, local revenue administration with special emphasis on property tax administration, local budgeting and accounting, and methods of capital finance. Newer topics covered include political economy of local government, fiscal rules for local fiscal discipline, local government integrity and performance accountability, and municipal mergers and inter-municipal cooperation based upon relative importance and political, fiscal and administrative autonomy of local governments. The treatment is non-technical and suitable for a wide variety of audiences including scholars, instructors, students, policy advisors,

and practitioners.

*Industrial Networks and Institutional Change in Postcommunism* Lexington Books

An accelerated introduction into the life and work of the first female Nobel Laureate for Economics, Elinor Ostrom. *Vincent Ostrom's Quest to Understand Human Affairs* Springer Science & Business Media

Can the nation state survive the internet? Or will the internet be territorially fragmented along state boundaries? This book investigates these questions.

**The Net and the Nation State**  
Lexington Books

Polycentricity and Local Public Economies Readings from the Workshop in Political Theory and Policy Analysis University of Michigan Press

**The Austrian and Bloomington Schools of Political Economy**  
Cambridge University Press

The aim of the book is to present contributions in theory, policy and practice to the science and policy of sustainable intensification by means of technological and institutional innovations in agriculture. The research insights re from Sub-Saharan Africa and South Asia. The purpose of this book is to be a reference for students, scholars and practitioners in the field of science and policy for understanding and identifying agricultural productivity growth potentials in marginalized areas.

**The Comparative Study of Public Economies** Springer Nature

This book identifies the criteria for successful constitutions in both theory and practice using the research and methodology of Vincent Ostrom.
