People often act reflexively when faced
with an ethical challenge. The necessity
to make a fast decision leaves little time
to think clearly. We get distracted by
what our colleagues and others expect
from us, and we make snap decisions
that we regret. While most agree that
outright lying, stealing, and harming are
wrong, they seem to disagree about
smaller compromises. This book argues
that it's better and more satisfying to
choose instead of react, to understand
distinctions instead of guess what is

right for us, and to remain cognizant of the impact of ethical compromise on our effectiveness at work and our personal relationships. The chapters of this book offer lessons and practical tools to help readers: 1. Develop radar to identify the situations where we are forced to make ethical compromises; 2. Understand how to use solid ethical logic and principles to foster clear thinking; 3. Draft and refine a personal code of conduct, and make it practical for everyday use; 4. Go beyond ethical basics to using your personal code as a lever for making more consistent decisions and reducing stress in work and life. Many books about ethics discuss weighty and controversial issues that few of us deal with in daily life--abortion, euthanasia, capital punishment, animal rights. While these

books are valuable, they are not so much tools for decision making as food for thought. This book, in contrast, focuses on one of ethics' most insidious problems: our inability to make clear and consistent choices in everyday life. The practical tools and techniques in this book help readers design a set of personal standards, based on sound ethical reasoning, for reducing everyday compromises.

Making Difficult Life and Work Decisions
SAGE

The ETHICS IN ACTION program brings to life the ethical issues and dilemmas counselors often encounter and provides ample opportunity for discussion, self-exploration, and problem solving of the

issues and dilemmas. The 22 video vignettes are based on a workshop for a group of counseling students, which included challenging questions and lively discussion, role-plays, and comments from the students and the group leaders. This educational program is divided into three segments: ethical decision-making, values and the helping relationship, and boundary issues and multiple relationships in counseling. Codes of Ethics and the Professions
National Academies Press

This book predicts the decline of today's professions and describes the people and systems that will replace them. In an

Internet society, according to Richard Susskind and Daniel Susskind, we will neither need nor want doctors, teachers, accountants, architects, the clergy, consultants, lawyers, and many others, to work as they did in the 20th century. *The Future of the Professions* explains how 'increasingly capable systems' - from telepresence to artificial intelligence - will bring fundamental change in the way that the 'practical expertise' of specialists is made available in society. The authors challenge the 'grand bargain' - the arrangement that grants various monopolies to today's professionals. They argue that our current professions are antiquated, opaque and no longer affordable, and that the expertise of the best is enjoyed only by a few. In their

place, they propose six new models for producing and distributing expertise in society. The book raises important practical and moral questions. In an era when machines can out-perform human beings at most tasks, what are the prospects for employment, who should own and control online expertise, and what tasks should be reserved exclusively for people? Based on the authors' in-depth research of more than ten professions, and illustrated by numerous examples from each, this is the first book to assess and question the relevance of the professions in the 21st century.

Ethical Dimensions in the Health Professions - E-Book Oxford University Press

This book guides graduate faculty and

supervisors in effective gatekeeping by bringing together the body of professional performance standards for multiple mental health fields and providing best practices, tools, and templates for use with trainees. Following an introduction to the professional, ethical, and legal issues involved in gatekeeping, the authors discuss contextual factors that can affect trainee functioning. Topics addressed include strategies for assisting low-performing trainees, faculty and supervisor roles, professional collaboration, evaluating trainee performance, designing remediation plans, documentation, and prevention and early intervention. Text features include “Notes From the Field,” “On the Legal Side,” and “What Would You Do?”

to enhance understanding of the material. “Gatekeeping in the Mental Health Professions presents a treasure trove of rigorous scholarship and practical recommendations for addressing one of the most vexing challenges that clinical educators and supervisors face—dealing with the problematic personal issues, interpersonal behavior, or unprofessional conduct of a student/trainee. From admission to graduate school through licensing for independent practice, the authors provide policies, procedures, contracts, and sample dialogues that are compassionate, mindful of students’ varying developmental stages, and respectful of due process. This authoritative text will help to fulfill the fundamental responsibility of every

clinical educator and supervisor to protect our profession and the clients we serve.” —Anne Marie “Nancy” Wheeler, JD, and Burt Bertram, EdD, Coauthors, *The Counselor and the Law* “This unique and valuable contribution to the field covers all aspects of gatekeeping, a term frequently discussed but sometimes not practiced. As the experts in this volume point out, mental health educational programs are ethically bound to ensure that their graduates are competent. This book not only discusses gatekeeping responsibilities but also provides useful ways to practice and document them. This must-read text is thorough, interesting, and critically important.” —Samuel T. Gladding, PhD, Wake Forest University *Requests for digital versions from the ACA can be found on

Much recent theorizing has been concerned to show that effective professional deliberation and judgement cannot be reduced either to technical rationality or to simple obedience to general occupational procedures or prescriptions. Professional judgement would seem to require the development of a distinctive mode of practical (ethical) reflection or 'wisdom' -

perhaps along the lines of Aristotle's 'phronesis' or practical wisdom. Reflection is required to address such key professional concerns as: What is the impact of official prescription and regulation on professional judgement? How should conflicts of professional judgment and public/political accountability be resolved? How might one reconcile tensions between universal justice and equality and particular client need? What is the role of emotion and/or affect in 'people professional' practice? This groundbreaking work addresses, in a thoroughly multidisciplinary way, the central question of the nature of professional judgement and deliberation that has recently come to the fore in the academic literature of profession and

professionalism. It proposes a marked shift - in theory, practice and policy-making - away from technical-rational approaches to professional decision-making in favour of reflection and deliberation informed by responsible moral judgement. This reflects a significant progressive trend in this literature by taking practical wisdom, rather than technical rationality, to lie at the heart of professional judgement. It is unique in bringing together key authors from different professional fields to address the issue of professional wisdom in a cross-professional and multidisciplinary way.

The moral foundations of law are discussed in "Legal Ethics," and the virtues of medicine and the doctor-patient relationship are covered in the final section, "Medical Ethics."

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to

oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Gatekeepers University of Ottawa Press In the aftermath of the Grenfell Tower tragedy, this new book provides thought provoking commentary on the nature of the relationship between society, the prevailing economic system and professionalism in the built environment. It addresses the changing responsibilities of professionals and in particular their obligation to act in the wider public interest. It is both an introduction to and an examination of professionalism and professional bodies in the sector, including a view of the future of professionalism and the organisations serving it. Simon Foxell outlines the history of professionalism in the sector, comparing and contrasting the development of the three major historic professions working in the

construction industry: civil engineering, architecture and surveying. He examines how their systems have developed over time, up to the current period dominated by large professional services firms, and looks at some options for the future, whilst asking difficult questions about ethics, training, education, public trust and expectation from within and outside the industry. The book concludes with a six-point plan to help, if not ensure, that the professions remain an effective and essential part of both society and the economy; a part that allows the system to operate smoothly and easily, but also fairly and to the benefit of all. Essential reading for built environment professionals and students doing the professional studies elements of their training or in the process of applying for

chartership or registration. The issues and lessons are applicable across all building professions.

The Morality of Roles in Public and Professional Life Elsevier Health Sciences

What does it mean to be an ethical professional? A professional career can be so demanding that it permeates every aspect of a person's life and personality. In light of this fact, it is especially important for students who are planning to enter a chosen profession to understand its moral status, moral virtues, and possible moral pitfalls, so that they will be equipped to deal with the inevitable moral quandaries that they will encounter as professionals. The most up-to-date professional ethics reader available, *Ethics Across the Professions* analyzes

the complex ethical issues that arise in such fields as engineering, finance, healthcare, journalism, and law. Featuring a wide array of both classic and contemporary sources, it ranges from works by Aristotle and Kant to selections by Michael Bayles, Sissela Bok, Paul Ekman, and Thomas Nagel. Organized topically, the anthology covers what it means to be a professional, outlines several ethical models, and addresses key issues including deception in professional life, privacy, loyalty, social welfare, conflicts of interest, and self-regulation. The book includes detailed chapter introductions, several practical case studies at the end of each chapter, and provocative discussion questions on issues like "whistle-blowing," the Iraq War,

educating illegal immigrant children, and advertisements for pharmaceutical companies. The Future of the Professions

Butterworth-Heinemann

This book trains students of the caring professions, across health and social care, in the basic philosophical skills and knowledge needed to deal with the ethical aspects of their profession. It shows why ethical education is required, and teaches the skills of reasoning that equip professionals to think critically about the theories and arguments used in ethical discussions. It demonstrates how we can be confident that we can rely on common moral ground; but it also points out how we need to recognise the influence of different world-views, and to note how, on some issues, these can lead us in starkly different directions. It explains relevant philosophical theories, and evaluates

their strengths and weaknesses – particularly in relation to what is required for proper professional ethics. It shows how to employ the commonly accepted framework of four ethical principles – beneficence, non-maleficence, autonomy, and justice. These various matters are then illustrated in two extended case studies, which focus on the problem of euthanasia, and the question of screening for disability and the value of human life. *Ethical Basics for the Caring Professions* is designed for use on all health and social care and human services courses on ethics and values. It will also be of interest to academics and professionals working within these fields. [Ethics for Adversaries](#) Oxford University Press, USA

Most mental health professionals and behavioral scientists enter the field with a strong desire to help others, but clinical practice and research endeavors often involve decision-making in the context of ethical ambiguity. Good intentions are important, but unfortunately, they do not always protect the practitioner and client from breaches in ethical conduct. Academics, researchers, and students also face a range of ethical challenges from the classroom to the laboratory. Now in a new expanded edition, *Ethics in Psychology and the Mental Health Professions*, the most widely read and cited ethics textbook in psychology, has emerged with a broadened scope extending across the mental health and behavioral science fields. The revised

volume considers many of the ethical questions and dilemmas that mental health professionals encounter in their everyday practice, research, and teaching. The book has been completely updated and is now also relevant for counselors, marriage and family therapists, social workers, and psychiatrists, and includes the ethics codes of those groups as appendices. Providing both a critical assessment and elucidation of key topics in the APA's guidelines, this comprehensive volume takes a practical approach to ethics and offers constructive means for both preventing problems, recognizing, approaching, and resolving ethical predicaments. Written in a highly readable and accessible style, this new edition retains the key features which

have contributed to its popularity, including hundreds of case studies that provide illustrative guidance on a wide variety of topics, including fee setting, advertising for clients, research ethics, sexual attraction, how to confront observed unethical conduct in others, and confidentiality, among others. *Ethics in Psychology and the Mental Health Professions* will be important reading for practitioners and students-in training. Ethical Maturity in the Helping Professions Melbourne University
Ethics Across the Professions A Reader for Professional Ethics Oxford University Press, USA

A Business Ethics Reader Broadview Press

As commonly understood, professional ethics consists of shared duties and episodic dilemmas--the responsibilities incumbent on all members of specific professions joined together with the dilemmas that arise when these responsibilities conflict. Martin challenges this "consensus paradigm" as he rethinks professional ethics to include personal commitments and ideals, of which many are not mandatory. Using specific examples from a wide range of professions, including medicine, law, high school teaching, journalism, engineering, and ministry, he explores how personal commitments motivate, guide, and give meaning to work.

Towards Professional Wisdom Ethics

Across the Professions A Reader for Professional Ethics

This unique textbook utilizes an integrated, case-based approach to explore how the domains of bioethics, public health and the social sciences impact individual patients and populations. It provides a structured framework suitable for both educators (including course directors and others engaged in curricular design) and for medical and health professions students to use in classroom settings across a range of clinical areas and allied health professions and for independent study. The textbook opens with an introduction, describing the intersection of ethics and public health in clinical practice and the six key themes that inform the book's core learning objectives, followed by a

guide to using the book. It then presents 22 case studies that address a broad spectrum of patient populations, clinical settings, and disease pathologies. Each pair of cases shares a core concept in bioethics or public health, from community perspectives and end-of-life care to medical mistakes and stigma and marginalization. They engage learners in rigorous clinical and ethical reasoning by prompting readers to make choices based on available information and then providing additional information to challenge assumptions, simulating clinical decision-making. In addition to providing a unique, detailed clinical scenario, each case is presented in a consistent format, which includes learning objectives, questions and responses for self-directed learning,

questions and responses for group discussion, references, and suggested further reading. All cases integrate the six themes of patient- and family-centered care; evidence-based practice; structural competency; biases in decision-making; cultural humility and

awareness of the culture of medicine; and justice, social responsibility and advocacy. The final section discusses some challenges to evaluating courses and learning encounters that adopt the cases and includes a model framework for learner assessment.
