MILLS MICAELA

Product-Focused Software Process Improvement IAP

This book constitutes the refereed proceedings of the 6th International Conference on Information Systems, Technology and Management, ICISTM 2012, held in Grenoble, France, in March 2012. The 38 revised papers were carefully reviewed and selected from 85 submissions. The papers are organized in topical sections on information systems; information technology; information management; business intelligence; management science and education; applications; workshop on program protection and reverse engineering.

IGI Global

"This book is to provide comprehensive coverage and understanding of various enterprise information systems (EIS) such as enterprise resource planning (ERP) and electronic commerce (EC) and their implications on supply chain management and organizational competitiveness"--Provided by publisher.

Cases on Technologies for Educational Leadership and Administration in Higher Education Springer

Current evidence points to management accountants using traditional software (such as spreadsheets) for budgeting, ABC, balanced scorecards and other performance management techniques independent of, rather than integrated with Enterprise Resource Planning (ERP) Systems. While there has been some limited research on the effects of ERP systems on management accountants, this report provides a comprehensive analysis of the consequences of implementation of ERP systems for management accountants. • This report provides a theoretical basis for studying the impact of Enterprise Resource Planning (ERP) systems on management accounting and provides critical insights into the opportunities provided by ERP systems for the most efficient use of management accounting techniques. • The seven UK case studies of ERP implementations reveal the correlation between the success of the system implementation and the

development of the role of management accountants in business partners thereby identifying the changes and skills required of management accountants. • The book provides guidance to management accountants on the changes they need to make in order to achieve the most from an ERP system implementation. *Managing Business with SAP* Springer Science & Business Media This book constitutes the proceedings of the International Conference on ENTERprise information systems, held Viana do Castelo, Portugal, in October 2010.

Field Studies and Theoretical Reflections on the Future of Work Szkoła Główna Gospodarstwa Wiejskiego w Warszawie

The 3-volume set LNCS 9731, 9732, and 9733 constitutes the refereed proceedings of the 18th International Conference on Human-Computer Interaction, HCI 2016, held in Toronto, ON, Canada, in July 2016. The total of 1287 papers and 186 posters presented at the HCI 2016 conferences and were carefully reviewed and selected from 4354 submissions. The papers thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The volumes constituting the full 27-volume set of the conference proceedings.

ENTERprise Information Systems, Part II IGI Global

This volume aims to outline the fundamental principles behind leadership, innovation and entrepreneurship and show how the interrelations between them promote business and trade practices in the global economy. Derived from the 2016 International Conference on Leadership, Innovation, and Entrepreneurship (ICLIE), this volume showcases original papers presenting current research, discoveries and innovations across disciplines such as business, social sciences, engineering, health sciences and medicine. The pace of globalization is increasing at a rapid rate and is primarily driven by increasing volume of trade, accelerating pace of competition among nations, freer flows of capital and increased level of cooperation among trading partners. Leadership, innovation, and entrepreneurship are key driving forces in enhancing this phenomenon and are among the major catalysts for contemporary businesses trading in the global economy. This conference and the enclosed papers provides a

platform in which to disseminate and exchange ideas to promote a better understanding of current issues and solutions to challenges in the globalized economy in relation to the fields of entrepreneurship, business and economics, technology management, and Islamic finance and management. Thus, the theories, research, innovations, methods and practices presented in this book will be of use to researchers, practitioners, student and policy makers across the globe.

Management and Information Technology: New Challenges IGI Global

On behalf of the PROFES Organizing Committee we are proud to present the proceedings of the 10 International Conference on Product Focused Software Process - rovement (PROFES 2009), held in Oulu, Finland. Since the first conference in 1999, the conference has established its place in the software engineering community as a respected conference that brings together participants from academia and industry. The roots of PROFES are in professional software process improvement motivated by product and service quality needs. The conference addresses both the solutions found in practice as well as relevant research results from academia. To ensure that PROFES retains its high quality and focus on the most relevant research issues, the conference has actively maintained close collaboration with industry and subsequently widened its scope to the research areas of collaborative and agile software development. A special focus for 2009 was placed on software business to bridge research and practice in the economics of software engineering. This enabled us to cover software development in a more comprehensive manner and tackle one of the most important current challenges identified by the software industry and software research community - namely, the shift of focus from "products" to "services." The current global economic downturn emphasizes the need for new methods and solutions for fast and business-oriented development of products and services in a globally distributed environment.

Assessing ERP Implementation Critical Success Factors Springer

This book constitutes the post conference proceedings of the 5th

International IFIP Working Conference on Research and Practical Issues of Enterprise Information Systems (CONFENIS 2011), held in Aalborg, Denmark, October 16-18, 2011. The 12 papers presented in this volume were carefully reviewed and selected from 103 submissions. The papers are organized in four sections on conceptualizing enterprise information systems; emerging topics in enterprise information systems; enterprise information systems as a service; and new perspectives on enterprise information systems. These papers are complemented by two keynotes and a short summary of the co-located Workshop on Future Enterprise Information Systems using Lego Serious Games.

Encyclopedia of Information Science and Technology, Second Edition Springer

Business Information Systems: Concepts, Methodologies, Tools and Applications offers a complete view of current business information systems within organizations and the advancements that technology has provided to the business community. This four-volume reference uncovers how technological advancements have revolutionized financial transactions, management infrastructure, and knowledge workers.

Advances in Enterprise Information Systems II Assessing ERP Implementation Critical Success Factors The Case of Middle East Airlines & Central Bank of Lebanon An enterprise resource planning (ERP) system is an integrated set of programs that provides support for core organizational activities. ERP is a software infrastructure embedded with "best practices" or best ways to do business based on common business practices and academic theory. The aim is to improve the cooperation and interaction between all the organizations' departments, such as the products planning, manufacturing, purchasing, marketing and customer service department. ERP systems implementation is costly and complex. In many cases, an ERP system is the largest single investment in any corporate-wide project. The software is expensive, and the consulting costs even more. The ERP systems implementation is the process where business process and ERP system match each other. Usually the firm has to change the business process per ERP systems. Sometimes most positions have to be redesigned according to the ERP systems. Thus the difficulties and high failure rate in implementing ERP systems. The failure percentage of ERP systems was determined by one study as ranging from 40 to 60% and from another study as between 60

and 90% (Langernwalter, 2000). This research examines what factors facilitate or inhibit the success of ERP projects. It uses a case study methodology to compare successful ERP implementation with an unsuccessful one. Data was collected by conducting interviews at various levels of the subject organizations and by examining their archived records when available. The study proposes that worked with functionality, maintained scope, project team, management support, consultants, internal readiness, training, planning and adequate testing are critical to a successful ERP project implementation and also dealing with organizational diversity, development, and budgeting are other important factors that are contributing to a successful implementation. *Qualitative Case Studies on Implementation of Enterprise Wide Systems*

Enterprise Systems have been used for many years to integrate technology with the management of an organization but rapid technological disruptions are now creating new challenges and opportunities that require urgent consideration. This book reappraises the implementation and management of Enterprise Systems in the digital age and investigates the vital link between business processes, information technology and the Internet for an organization's competitive advantage and success. This book primarily focuses on the implementation, operation, management and integration of Enterprise Systems with fast emerging disruptive technologies such as blockchains, big data, cryptocurrencies, artificial intelligence, cloud computing, data mining and data analytics. These disruptive technologies are now becoming mainstream and the book proposes several innovations that organizations need to adopt to remain competitive within this rapidly changing landscape. In addition, it examines Enterprise Systems, their components, architecture, and applications and enlightens readers on the benefits and shortcomings of implementing them. This book contains primary research on organizations, case studies, and benchmarks ERP implementation against international best practice.

Information Systems, Technology and Management Springer

This book focuses on the fundamentals of ERP and details methods of implementing ERP systems. By using actual case incidents, this book charts the life cycle of ERP projects from cost and profit analysis, through change-management on the basis of re-engineering and technical requirements, to the ion of the ERP

system and its final application. It equips managers with the appropriate skills for utilizing ERP systems, and uninitiated readers will gain a thorough understanding of an ERP project life-cycle.

IFIP WG 8.6 International Conference on Transfer and Diffusion of IT, TDIT 2013, Bangalore, India, June 27-29, 2013, Proceedings Springer Science & Business Media

Enterprise Resources Planning (ERP) systems have now become an integral part of the organisational structure of thousands of modern organisations with any sizes and in many countries and sectors. However, after very substantial investment, successful implementation of ERP is in fact not the end of the journey. Very often, the system post-implementation stage is where the real challenges begin. This book reports on a research study that aimed at identifying and exploring potential barriers and risks that can affect successful post-implementation of ERP systems in the context of Chinese Stated-Owned Enterprises (SOEs). The study adopted a mixed-methods research design, which consisted of a questionnaire survey and a follow-up multiple case study. The findings of the study showed that the identified ERP barriers and risks are interwoven and closely interrelated with each other. More importantly, business-oriented and human-related challenges, which are associated with the hitherto management deficiencies in SOEs, were found to be the main triggers of potential ERP post-implementation failure and should therefore receive substantial attention from managers in Chinese SOEs.

Implementing for Effectiveness CRC Press

This book contains 15 thoroughly refereed research papers selected from 90 submissions for the 5th, 6th, and 7th International Workshop on Enterprise Systems, Pre-ICIS 2010-2012, held in St. Louis, MO, USA, in December 2010, in Shanghai, China, in December 2011, and in Orlando, FL, USA, in December 2012, respectively. In addition, two invited papers complete this volume. The contributions in this edited book are multidisciplinary in scope and cover strategic, organizational, and technological dimensions. They range from purely conceptual to literature reviews to papers on teaching-related aspects. Taken together, these papers provide a holistic view of the enterprise systems research domain, including key characteristics, implementation issues, general aspects of enterprise systems use, specific solutions such as CRM and SCM, and future research

directions.

Proceedings of the 2016 International Conference on Leadership, Innovation and Entrepreneurship (ICLIE) CRC Press

This book constitutes the proceedings of the 6th International IFIP Working Conference on Research and Practical Issues of Enterprise Information Systems (CONFENIS 2012), held in Ghent, Belgium, during September 19–21, 2012. The theme of the conference was "enterprise information systems of the future -- evolving toward more performance through transparency and agility," mirroring the trend toward more open and more flexible systems. In all, 53 contributions were submitted and after a rigorous review process 10 full papers and 15 short papers were selected for publication in this book. These 25 papers present a well-balanced mix between the traditional social sciences and the novel design science paradigms in enterprise information systems research, and they also include practitioner-oriented and practice-driven contributions. The topics covered fall into three categories: information management in businesses (e.g., enterprise modeling or business process management), information systems from a management perspective (e.g., service innovation, business intelligence, or decision support systems), and ERP offerings and implementations (e.g., software as a service or ERP case studies). This fifteen-chapter monograph edited by Joanna Paliszkievicz is an interesting read that focuses on light to moderate topics in the areas of management and information technology. The topics are from cryptocurrencies and their online exchanges in Poland to using the concept of blockchain in agribusiness, using virtual reality, creating knowledge and innovation in family businesses, the importance of social media in education, risk analysis, security and forensic science, and effective communication in enterprises. The monograph continues with topics of CRM/ERP

implementation in SMEs in Poland, big data/agri-food industry and innovative solution for knowledge management, the impact of digital technologies on competences, digitization in agriculture, and the impact of merchandising on consumer behaviour.

Although there is little connection in terms of reading structure from one chapter to the next, each chapter uniquely stands alone to offer insights into the topic it examines in a very simple and understandable manner.

[10th International Conference, PROFES 2009, Oulu, Finland, June 15-17, 2009, Proceedings](#) John Wiley & Sons

Enterprise Resource Planning (ERP) is an enterprise-wide software solution that integrates and automates business functions of an organization. This real-time information integration across the organization's functional areas increases operational efficiencies and helps managers to arrive at better decisions making the organization more competitive. Today having an ERP system is not a luxury, but a necessity. A robust ERP system along with a fully trained workforce is a must for an organization's survival.

[Enterprise Information Systems of the Future](#) Butterworth-Heinemann

This volume presents the revised and peer reviewed contributions of the 'EPR Future 2014' conference held in Dornbirn/Austria on November 17-18th, 2014. The book assembles latest research and recent practice on enterprise information systems in general and specifically on core topics like business process management (BPM), business intelligence (BI) and enterprise resource planning (ERP) systems. To master the challenges of enterprise information systems comprehensively, this book contains chapters with a business as well as an IT focus to consider enterprise information systems from various viewpoints.
