Even though concern about and interest in technology transfer have existed since the 1950s, it has become of increasing importance to lesser-developed and developing countries since the 1970s. The transfer of technology in general, and in particular the transfer of technical knowledge, lies at the heart of the North-South debate. There is an abundance of literature on technology transfer in almost every field of interest--policy, practice, applied case studies, and general recommendations--but little, if any, of the information is integrated. It remains widely distributed throughout the fields of economics, business, rural sociology, and

anthropology. The same may be said for various studies of consultants as change agents. On the other hand, studies of counterparts--host country professionals--have been almost entirely neglected, with the exception of their implied roles as innovators or acceptors. There have been few attempts to tie practice to theory, theory to research, or research to practice. This volume attempts to provide the link between theory, research, and practice. Based upon research conducted at two large-scale water resource development projects in Indonesia, it focuses upon the problems and solutions encountered by two primary sets of people involved in the transfer of technical knowledge--foreign consultants and host country counterparts. Dr. Scott-Stevens presents a unified and applied approach to many of the cross-cultural theories, issues, and problems common to the transfer of technical knowledge across cultures.

This book is the first to systematically describe the key components necessary to ensure successful implementation of Collaborative Problem Solving (CPS) across mental health settings and non-mental health settings that require behavioral management. This resource is designed by the leading experts in CPS and is focused on the clinical and implementation strategies that have proved most successful within various private and institutional agencies. The book begins by defining the approach before delving into the neurobiological components that are key to understanding this concept. Next, the book covers the best practices for implementation and evaluating outcomes, both in the long and short term. The book concludes with a summary of the concept and recommendations for additional resources, making it an excellent concise guide to this cutting edge approach. Collaborative Problem Solving is an excellent resource for psychiatrists, psychologists, social workers, and all medical professionals working to manage troubling behaviors. The text is also valuable for readers interested in public health, education, improved law enforcement strategies, and all stakeholders seeking to implement this approach within their program,

organization, and/or system of care.

Aimed at the senior managers of SMEs who are looking to sell all or part of the business. This book shows how to implement Corporate Governance procedures to add both perceived and real value to a business. Implementing CG procedures before sale of the business is likely to add a premium to the price, increase the pool of buyers at the asking price and bring a business to the top of the acquisition shopping list. The book is in two sections. The first addresses the basic theory underpinning Corporate Governance to help the reader understand and decide which compliance issues are immediately useful to their business, and which can wait. Prioritisation is key. The second section explains the Code, section by section. It indicates clearly what is being asked for with a "translation into plain English. It explains what needs to be done and provides a series of check-lists. CG standards are here to stay and the demands are rising. This book is a guide to voluntarily adopting CG to demonstrate the pedigree and worth of any business – and to let that business stand out from the rest. \* Shows how to maximise the sale value of Small and Medium Enterprise \* Illustrates which actions to prioritise \* Provides a plain English translation of the Code and checklists to aid compliance

Through a multi-country study, Comparative Perspectives on International School Leadership examines the current global spread of educational leadership, occurring rapidly and widely. Exploring five international case studies of leadership policy, preparation, and practice under the framework of policy

borrowing and adaptation, Magno attempts to understand and account for commonalities and differences across country contexts. Rather than assuming a particular model or theory to leadership is best, *Comparative Perspectives on International School Leadership* takes a policy-oriented perspective and considers how and why certain approaches are being formulated and accepted, including an examination of motivations, influencers, actors, institutions, and implementation processes. Magno ultimately argues that efforts toward formalizing educational leadership reflect current global political objectives to improve schools by increasing accountability, transparency, and professionalism. This engaging book will be of interest to scholars and students in the fields of educational leadership and comparative education.

In recent years the police have become one of the most watched and most visible organisations, and across the media there has been constant interest in the police. In such a situation the police themselves have been intensely concerned with promoting, projecting and protecting the police image. This book is concerned to document and to explain this image work, the activities in which the police engage that construct and project images of policing. Drawing upon first-hand research with the

police themselves (including such examples as the way the South Yorkshire Police handled the Miners Strike and the Hillsborough stadium disaster), the book includes a detailed look at police press and public relations officers at work, and at operational policing and police work. Its broader argument is that image work has the capacity to both legitimate policing and to mask problems of legitimation. At a time of intense debate about the future role and nature of the police this book makes a key contribution, and raises important questions about the implications of police image work for both democratically accountable policing and the wider transformations in society being brought about by the media and its management.

Quality assurance of pharmaceutical products is a continuing concern of WHO. Despite efforts made around the world to ensure a supply of quality and effective medicines, substandard, spurious and counterfeit products still compromise health care delivery in many countries. To respond to the global need for adequate quality assurance of pharmaceuticals, WHO's Expert Committee on Specifications for Pharmaceutical Preparations has over the years made numerous recommendations to establish standards and guidelines and to promote the effective functioning of national regulatory and control systems and the implementation of internationally agreed standards by trained personnel. Many of the relevant documents endorsed by the Committee are reproduced in this volume providing guidance covering all aspects of good manufacturing practices (GMP). Important texts on inspection are also included. Most of the material has been published separately in the Expert Committee's reports. This compendium brings it together to make it more accessible and of greater practical value to those working in faculties of pharmacy, in medicines regulation and control and in the pharmaceutical industry. This is the second updated edition of the compendium and includes texts published in 2005 and 2006 in the WHO Technical Report Series.
