Teoria del restauro. Lezioni raccolte da Licia Vlad Borrelli, Joselita Raspi Terra, Giovanni Urbani Nardini Editore
'Conservation: Principles, Dilemmas, and Uncomfortable Truths' presents multi-perspective critical analyses of the ethics and principles that guide the conservation of works of art and design, archaeological artefacts, buildings, monuments, and heritage sites on behalf of society.
Contributors from the fields of philosophy,

sociology, history, art and design history, museology, conservation, architecture, and planning and public policy address a wide range of conservation principles, practices, and theories from the US, Canada, Europe, Australia and New Zealand, encouraging the reader to make comparisons across subjects and disciplines. By wrestling with and offering ways of disentangling the ethical dilemmas confronting those who maintain and sustain cultural heritage for today and tomorrow, 'Conservation: Principles, Dilemmas, and Uncomfortable Truths' provides an essential reference text for conservation professionals, museum and

heritage professionals, art and cultural historians, lecturers and students, and all others invested in cultural heritage theories and practices. Alison Richmond, as a Senior Conservator in the Victoria and Albert Museum and Deputy Head of the Conservation Department at the Royal College of Art, maintains teaching and research roles in conservation theory, principles and ethics, and has developed decision-making tools for conservators. She is an Accredited Conservator-Restorer (ACR), a Fellow of the International Institute for Conservation (FIIC), and a Trustee of the UK's Institute of Conservation (Icon) since 2005. Alison

Bracker received her PhD in the History of Art from the University of Leeds, and manages the Events & Lectures programme at the Royal Academy of Arts in London. As co-founder of Bracker Fiske Consultants, she advises on the presentation, description, documentation, and care of artworks comprising modern media, and lectures and publishes widely on the theoretical and practical issues arising from the conservation of non-traditional and impermanent materials in contemporary works of art.

The Grove Encyclopedia of Materials and Techniques in Art Nardini

Conservation of Easel Paintings, Second Edition provides a much-anticipated update to the previous edition, which has come to be known internationally as an invaluable and comprehensive text on the history, philosophy and methods of the treatment of easel paintings. Including 49 chapters written by more than 90 respected authors from around the world, this volume offers the necessary background knowledge in technical art history, artists' materials and scientific methods of examination and documentation. Later sections of the book

provide information about the varying approaches and methods for treatment and issues of preventive conservation, as well as valuable reflections on storage, shipping, and exhibition. Including exciting developments that have taken place since the last edition was published, the book also covers new techniques of examination, especially MacroXRF scanning and Reflectance Transmission Imagery. Drawing on research presented at recent professional conferences, information about innovative methods for cleaning modern and contemporary paintings and insights into modern oil paints is also included. Incorporating the latest regulations and understanding of health and safety practices and integrating theory with practice throughout, Conservation of Easel Paintings, Second Edition will continue to be an indispensable reference for practicing conservators. It will also be an essential resource for students taking conservation courses around the world. A History of Conservation Culture and its More Recent Developments Routledge Structural interventions to historic buildings are however an integral part of

the effort to select and update their design, historic and cultural values. Structural Design in Building Conservation deals with such design issues and shows how technical choices integrate with the planning and architectural outcomes in a conservation project. It brings together theory with current conservation technology, discussing the possibilities of structural details and strategies in architectural expression and is particularly directed at students of architectural conservation technology and practicing engineers and architects--
Teoria del restauro Springer Nature This new volume in the GCI's Readings in Conservation series brings together a selection of seminal writings on the conservation of historic cities. This book, the eighth in the Getty Conservation Institute's Readings in Conservation series, fills a significant gap in the published literature on urban conservation. This topic is distinct from both heritage conservation and urban planning despite the recent growth of urbanism worldwide, no single volume has presented a comprehensive selection of these important writings until now. This

anthology, profusely illustrated throughout, is organized into eight parts, covering such subjects as geographic diversity, reactions to the transformation of traditional cities, reading the historic city, the search for contextual continuities, the search for values, and the challenges of sustainability. With more than sixty-five texts, ranging from early polemics by Victor Hugo and John Ruskin to a generous selection of recent scholarship, this book thoroughly addresses regions around the globe. Each reading is introduced by short prefatory remarks explaining the rationale for its selection and the principal matters covered. The book will serve as an easy reference for administrators, professionals, teachers, and students faced with the day-to-day challenges confronting the historic city under siege by rampant development.

Teoria e pratica del restauro in

Cesare Brandi Routledge

This book traces the development of scientific conservation and technical art history. It takes as its starting point the final years of the nineteenth century, which saw the establishment of the first museum laboratory in Berlin, and groundbreaking international conferences on art

history and conservation held in pre-World-War-I Germany. It follows the history of conservation and art history until the 1940s when, from the ruins of World War II, new institutions such as the Istituto Centrale del Restauro emerged, which would shape the post-war art and conservation world. The book will be of interest to scholars working in art history, conservation history, historiography, and history of science and humanities.

Structural Design in Building

Conservation All'Insegna del Giglio

This book examines the influence of architectural design in the conservation of historic buildings by discussing in detail an important building complex in Rome: the Temple of Venus and Rome, the monastery of Santa Maria Nova and the church of Santa Francesca Romana. As the most complete site in the Roman Forum that has reached our times with a rich architectural stratification almost intact, it is a clear product of continuous preservation and transformation and it has not been studied in its complexity until now. The Temple of Venus and Rome and Santa Francesca Romana at the Roman Forum unravels the original designs and

the subsequent interventions, including Giacomo Boni's pioneering conservation of the monastery, carried out while excavating the Roman Forum in the early twentieth century. The projects are discussed in context to show their significance and the relationships between architects and patrons. Through its interdisciplinary focus on architectural design, conservation, archaeology, history and construction, this study is an ideal example for scholars, students and architects of how to carry out research in architectural conservation.

The Conservation Movement

LetteraVentidue Edizioni

A member of the art history generation from the golden age of the 1920s and 1930s, Millard Meiss (1904-1975) developed a new and multi-faceted methodological approach. This book lays the foundation for a reassessment of this key figure in post-war American and international art history. The book analyses his work alongside that of contemporary art historians, considering both those who influenced him and those who were receptive to his research. Jennifer Cooke uses extensive archival

material to give Meiss the critical consideration that his extensive and important art historical, restoration and conservation work deserves. This book will be of interest to scholars in art history, historiography and heritage management and conservation.

Histories of Conservation and Art History in Modern Europe Routledge

Cities are not made only of stone: they harbor ways of life, practices, movements, moods, atmospheres, feelings. Yet the ineffable nature of affects has long deprived human passions of a meaningful role when it comes to observing urban space and envisioning its future transformation. With this book, we explore the contemporary city and its transitional conditions from a different perspective: a quest to understand how the space of collective life and the feelings this engenders are connected, how they mutually give form to each other. In an interdisciplinary collection of essays, *The Affective City* means to open a discussion on the “soft” presences animating the world of urban objects: beyond the city built out of mere things, this book’s focus is on the forces that make urban life

emerge, thrive, flourish, but also wither, and sometimes die. A task crucial for the survival of cities as human habitats, in an urban world that – with every passing day – seems to draw closer a crisis.

Cesare Brandi's Thought from Theory to Practice Routledge

The book presents for the first time the restoration of Amundsen’s glass slides, one of the most beautiful collections of slides in the world. The 248 slides are the photographic testimony of three great explorations: the Northwest Passage (1903-1906), the conquest of the South Pole (1910-1912) and the Maud expedition (1918-1925). Discovered by chance in 1986, the slides were restored in 2009 by Pietro Librici at the National Library of Norway, in a continuous cooperation with the institute team. The restoration is presented analytically in its methodological, technical, scientific and operational aspects, constituting an updated model of intervention. Critical historical studies that accompanied the restoration and the expressive features of the slides have also led the author to identify Amundsen’s own style which lies between documentary photography and

photographic documentation and make the book a particular opportunity to immerse in the charm of polar expeditions, in the first years of the 20th century when the poles were the only areas of terra incognita left on the world map.

It describes the unique thermal

features of historical properties, closely examining how the building materials, structural elements, and state of conservation can impact energy efficiency, including sample calculations and results. It also describes means and aims of several fundamental steps to improve energy efficiency in historical buildings with an experimentation on a case study. This timely text also introduces leading-edge technologies for enhancing the energy performance of historical buildings, including the potential for integration of co- ad tri-generation though micro-turbines, photovoltaics and solar collectors and their compatibility with architectural preservation.

The Ashgate Research Companion to Heritage and Identity Routledge

The word conservation, when used in the context of the preservation of built heritage, implies an intrinsically complex concept that evolved over time, since it has been influenced by the perception of history throughout time. This volume emphasises why an understanding of the cultural evolution of the conservation approach must be considered a prerequisite for architects and engineers if

they are to cooperate in full harmony with historic-artistic culture for the preservation of global built heritage. In particular, the volume highlights how, during the second half of the last century, the preservation process also involved engineering – the science of making practical applications of knowledge – which, for a long time, made an uncritical use of techniques and materials and devised interventions on historical heritage that were heavily invasive. The volume also devotes special attention to the problems related to seismic risk, to which Italy, Greece and Portugal are particularly prone. Problems that emerge during the crisis and reconstruction phases are dealt with in detail, as is scheduled maintenance, as this latter approach always constitutes an improvement in the performance of the monument and is the most appropriate tool for the conservation of the built heritage. Finally, the volume collects examples of building restoration with case studies of many outstanding monuments. The work will appeal to professionals and academics in the broader fields of civil engineering (both geotechnical and structural engineering), architecture, art

history, the history of architecture, restoration and cultural heritage management. This book will: Provide a critical reading of the history of conservation; Discuss materials and techniques of ancient architecture; Cover seismic vulnerability and preservation of the historic integrity of the monument; Advocate an approach based on programmed maintenance; Feature numerous case histories, including St Mark's Basilica in Venice and the complex restoration of the cathedral of Notre-Dame in Paris.

Storia e teoria del restauro delle opere d'arte Springer

This is the first book to bring together the work of a modern motion picture film laboratory together with the specialist techniques for preservation and restoration of archival film. The book's data has its origins in a training programme called FILM which was written by members of the Gamma Group with funding from the EU fund Force. The committee comprised senior film archivists and technicians in charge of film conservation departments or working film laboratories within national film archives, together with

technicians from commercial laboratories which specialise in archival film conservation and who do not work for national and local archives. The final group consisted of many of the most experienced individuals in their fields. Restoration of Motion Picture Film is an extremely informative, well-researched book which is an unmissable addition to the bookshelves of conservators, archivists and curators worldwide. Film history and film conservation students will also find it of great interest and use. *

Only book in English on this subject * Prepared by leading specialists in their field * Includes coverage of digital technology

L'idea di un Convegno internazionale su La teoria del restauro nel Novecento da Riegl a Brandi è nata dall'esigenza di ricostruire le tappe fondamentali che hanno fatto del restauro un concetto centrale dell'odierno orizzonte culturale fino a culminare nella Teoria del restauro pubblicata da Cesare Brandi nel 1963. Fedeli all'articolazione del Convegno, gli atti che ora si pubblicano muovono da Alois Riegl e dal contesto

europeo per proseguire attraverso il contributo di altri protagonisti e concezioni: dalle sporadiche ma lucide prese di posizione di Roberto Longhi agli apporti di Corrado Ricci, Giulio Carlo Argan, Carlo Ludovico Ragghianti e Bruno Zevi. Inserita in questo plesso storico-culturale, la Teoria del Restauro è stata quindi indagata in quanto fulcro di un ampio spettro di ambiti e problematiche che, in sintonia con la proteiforme attività di Brandi, ha visto il coinvolgimento di studiosi di estetica, storici dell'arte, architetti, archeologi. Per altri versi, l'aver affrontato le vicende relative alla nascita e all'attività dell'Istituto Centrale per il Restauro ha consentito alcuni importanti approfondimenti su aspetti tecnico-specialistici e rivelato gli intrecci tra esigenze conservative e scelte museografiche.

Spaces, Atmospheres and Practices in Changing Urban Territories Il Prato

This volume on paintings conservation includes more than seventy texts ranging from the fifteenth century to the present day. Some are classic and highly influential writings; others, although little known when first published, in retrospect

reflect important themes and issues in the history of the field. Many appear here in English for the first time, including translations of D. Vicente Polero y Toledo's 1855 essay *Arte de la Restauración* (The Art of Restoration), and Victor Bauer-Bolton's treatise from 1914, *Sollen fehlende Stellen bei Gemälden ergänzt werden? (Should Missing Areas of Paintings Be Made Good?)*. The book is divided into six sections: An Historical Miscellany, History of the Profession, Study of Artists' Materials and Techniques, Structural Interventions, Philosophical and Practical Approaches to Cleaning and Restoration, and Cleaning Controversies. This is the second volume to appear in the Getty Conservation Institute's Readings in Conservation series, which publishes texts considered fundamental to an understanding of the history, philosophies, and methodologies of conservation. From Connoisseurship to Iconology and Kulturgeschichte Alinea Editrice

Restoration of Amundsen's lantern slides Getty Publications

This book presents recent research on ancient Silk Road wall paintings, providing an up-to-date analysis of their coloring materials and techniques, and of developments in efforts to preserve them. The destruction of the Bamiyan Buddhas in 2001 encouraged international collaboration between conservation research institutes to study and protect the Silk Road's painted heritage. The collaborations led to exciting new discoveries of the rich materials used in wall painting, including diverse pigments and colorants, and various types of organic binding media. In addition, comparative research across the region revealed shared painting practices that indicate the sophisticated exchange of technologies and ideas. In parallel with these advances in technical understanding, greater awareness and sensitivity has been fostered in endeavors to preserve this fragile heritage. The book offers insights obtained from conservation projects and ongoing research, that encompass the geographical regions and periods related to the Silk Road, including from Japan, China, Korea, India and Afghanistan, and countries of the Eastern

Mediterranean region. It also discusses the current issues and future challenges in the field. Featuring concise chapters, the book is a valuable resource for students and professionals in the field of cultural heritage preservation, as well as those who are not familiar with the fascinating topic of Silk Road wall painting research.

Historical and Philosophical Issues in the Conservation of Cultural Heritage
Routledge

Even more important is the question of the pre-Seljuq work in the Masjid-i-Jami' of Isfahan. It is the most interesting, and, in the loveliness of some parts, the most beautiful of Persian buildings. No one can stand in its great dilapidated court, or under the Seljuq domes, where the loud flight of agitated pigeons leaves a profound silence that seems to roar in the ears, without a sense of awe. It is the work of many periods. But in the succession of these it contains hardly anything that is not of the best..." (Eric Schroeder, *Standing Monuments of the First Period*, 1967). The text publishes a thorough research of one element of the pre-Seljuq work of this monument, its wall painting. The few fragments discovered during the

excavation of the Italian archaeological mission of the 1970s are here analysed with the help of various scholars from different fields of research. Their contribution reveals a fascinating glimpse of a little known artistic genre of the early Islamic art. The Author: Michael Jung is Curator of the Department of Islamic Archaeology and Ancient Southern Arabia of the Museo Nazionale d'Arte Orientale/Rome. He has participated in numerous archaeological missions in Spain, Syria, Yemen and Iran. Currently he is scientific director of CONTENTS A short outline of the main building phases of the Great Mosque Michael Jung The wall paintings of the pre-Seljuq mosque Michael Jung Introduction to the research of the excavated fragments The refined typology of the wall paintings Chronological attribution and search for comparisons The wall paintings of the post-Seljuq mosque Michael Jung The excavated mural paintings of sector 112 Two paintings of mosques and hand-prints The wall paintings of the gav-chah Materials and painting technique of the wall paintings of the pre-Seljuq Isfahani Mosque Paolo Cornale, Fabio Frezzato,

Theory of Restoration Teoria del restauro Teoría de la restauración This book undertakes a critical survey of art history across Europe, examining the recent conceptual and methodological concerns informing the discipline as well as the political, social and ideological

factors that have shaped its development in specific national contexts. Vol.2 Oxford University Press, USA Il volume 32.1 è suddiviso in due parti. La prima comprende gli articoli proposti annualmente alla rivista da studiosi italiani e stranieri che illustrano ricerche archeologiche interdisciplinari in cui l'uso delle tecnologie informatiche risulta determinante per l'acquisizione, l'elaborazione e l'interpretazione dei dati. Tecniche di analisi statistica, banche dati, GIS e analisi spaziali, tecniche di rilievo tridimensionale e ricostruzioni virtuali, sistemi multimediali, contribuiscono a documentare le testimonianze del passato

e a diffondere i risultati della ricerca scientifica. La seconda parte del volume contiene un inserto speciale curato da Angela Bellia e dedicato a una tematica innovativa, l'archeomusicologia, un campo di ricerca multidisciplinare che adotta i metodi dell'archeologia per lo studio della musica e della vita musicale nel mondo antico. Gli articoli s'incentrano sul ruolo delle tecnologie digitali basate sulla modellazione 3D e sulla simulazione del suono per ampliare le conoscenze sugli strumenti musicali dell'antichità e sul prezioso, ma estremamente labile, patrimonio sonoro. Chiude il volume la sezione dedicata alle Note e recensioni.
