The process of labor and delivery has been one of the most perilous activities in human life. The awkward evolutionary compromises giving rise to humans makes birthing potentially life threatening for both mother and child. Despite the development of modern care, labor and delivery continues to be

a dangerous process even though the levels of fatality have decreased over the past several decades. This clinically focused guide to modern labor and delivery care covers low and high-risk situations, the approach of the team in achieving a successful outcome and what to consider when quick decisions have to be made. Aimed at both trainee and practicing obstetrician-gynecologists, this new edition includes practical guidance such as algorithms, protocols, and quick-reference summaries. It is squarely focused on the

process of birth and concentrates on modern clinical concerns, blending science with clinical applications.

The scope is not simply labor and delivery, but integrated management of patient care in labor and delivery units as they are utilized today. Thirty-four contributed chapters give an overview, followed by discussion of normal labor and delivery management (induction, multiple gestations, malpresentations); labor and delivery as an intensive care unit (tocolysis, preterm labor, asthma, sickle cell disease); controversies (e.g. electronic fetal monitoring, delivery of

the very-low-birth-weight infant); and social obstetrics (e.g. medicolegal issues, conflicts between maternal and fetal well-being, perinatal loss).

This book focuses on the emotional complexity of language teaching and how the diverse emotions that teachers experience while teaching are shaped and function. The book is based on the premise that teaching is not just about the transmission of academic knowledge but also about inspiring students, building rapport with them, creating relationships based on empathy and trust, being patient and most importantly controlling one's own emotions and being able to influence

students' emotions in a positive way. The book covers a range of emotion-related topics on both positive and negative emotions which are relevant to language teaching including emotional labour, burnout, emotion regulation, resilience, emotional intelligence and wellbeing among others. These topics are studied within a wide range of contexts such as teacher education programmes, tertiary education, CLIL and action research settings, and primary and secondary schools across different countries. The book will appeal to any student, researcher, teacher or policymaker who is interested in research on the psychological aspects of foreign language teaching.

- Nursing Times Online Providing a practical and comprehensive guide to midwifery care, The Midwife's Labour and Birth Handbook continues to promote best practice and a safe, satisfying birthing experience with a focus on women-centred care. Covering all aspects of care during labour and birth, from obstetric emergencies to the practicalities of perineal repair (including left-hand suturing), the fourth edition has been fully revised and updated to include: Full colour photographs of

kneeling extended breech and footling breech births New water birth and breech water birth photographs Female genital mutilation Sepsis Group B streptococcus Care of the woman with diabetes /Neonatal hypoglycaemia Mental health Seeding/microbirthing It also addresses important issues such as: Why are the numbers of UK women giving birth in stirrups RISING rather than falling? Why are so few preterm babies given bedside resuscitation with the cord intact? Would the creation of midwife breech practitioners/specialists enable more women to choose vaginal breech birth and is breech water birth safe? What is the legal position for women who choose to free birth - and their birth partners? Why are midwives challenging the OASI care bundle?

Incorporating research, evidence and anecdotal observations, The Midwife's Labour and Birth Handbook remains an essential resource for both student midwives and experienced practising midwives.

Let's face it, the job market is constantly changing. The influx of disruptive technologies like Artificial Intelligence, the Cloud, and Big data is shrinking opportunities for conventional office jobs. Hold on, all hope is not lost. The rise in technological innovations have given rise to freelancing - the freedom to choose your own working hours and to work from your own home - your comfort zone. Mobile technology has empowered

so many people to accomplish tasks from home with limited supervision. For instance, IT analysts, statistical data analysts, graphic designers, and animators can practically work anywhere and with minimum supervision. The gig economy is booming. In fact, freelancing is fast gaining much ground across various workforces. For instance, Payoneer, a leading financial platform, has estimated that the American workforce will contain about 40 percent freelancers by 2020. Europe already boasts the largest number of freelancers, with Asia and Africa trailing closely behind. Working at home offers you flexibility - the ability to choose your working hours. It saves you the cost of commuting to and from your workplace. In addition to this, you also get to reduce

your wardrobe allowance. What's more, working from home doesn't mean you have to lose out on high-paying jobs. According to Flexjobs, freelancing gigs are some of the highest paying jobs. ### **Model Rules of Professional Conduct**

Springer Science & Business Media

Since the 1980s, household debt has been increasing rapidly. The high level of household indebtedness has been accompanied by a high household bankruptcy rate. My research attempts

to provide a better understanding of the theoretical mechanisms behind these credit market and bankruptcy statistics. One of the purposes of Chapter 7 bankruptcy law is to improve debtors' work incentives by giving them a "fresh start". Chapter 13 bankruptcy, on the other hand, prescribes a repayment plan that garnishes future wages from debtors to repay creditors, which acts like a wage tax in standard models. In the first chapter, I ask the question "How much does a fresh start increase labor supply by improving work incentives?" Because the bankruptcy decision is endogenous, Chapter 7 filers tend to have less earnings and more debt than average individuals. Estimation of the change in labor supply as a consequence of the bankruptcy treatment must

therefore take into account selection effects which is complicated by the interdependence of labor and credit market decisions. To answer my question quantitatively, I construct a dynamic partial equilibrium job search model with both bankruptcy choices which allows direct assessment of counterfactual outcomes. Competitive financial intermediaries offer a menu of loan sizes and interest rates that make zero profits. The model predicts that in the short run, a fresh start on average increases the labor supply of Chapter 7 bankruptcy filers by 3.5% over repayment and 3.4% over Chapter 13 bankruptcy. The Fair Credit Reporting Act (FCRA) dictates that adverse events such as a Chapter 7 bankruptcy must be removed from an individual's credit

record after ten years. The intent of the law is to provide partial consumption insurance by giving an individual a fresh start. However, the law obviously weakens incentives not to default, which can result in higher interest rates that in turn reduce intertemporal insurance. Because of this tradeoff, it is unclear what is the optimal length of time that an adverse event should be on an individual's credit record. In the second chapter, I assess the welfare consequences of varying the length of time that adverse events can be on one's credit record. We calibrate the model to US data where the exclusion parameter is for ten years. Then I run a counterfactual to find the length that maximizes ex-ante welfare. I find that the optimal length is much lower,

specifically 2.5 years, than the current regulation and that the consumption equivalent welfare gain (slightly over 1%) of such a policy change is large. In the third chapter, I explore how such credit checks (information on observable credit market actions) might help with incentives in labor market when there is a monopolistic employer. According to a Survey by the Society for Human Resource Management (2010), 25% of human resource representatives interviewed in 1998 indicated that the companies they worked for ran credit checks on potential employees while the fraction increased to 43% in 2004 and 60% in 2009. Ever since Holmstrom (1979), we've known that wage contracts can be designed to improve incentives for workers. I show by means

of example that if the employer can have wage contracts contingent upon the asset choice of employees, the profit may be increased. However, some employees may be worse off. We may then assess the welfare consequences of a law (the Equal Employment for All Act (H.R. 3149)) prohibiting the use of credit information in employment decisions which currently sits before Congress. *A Practical Manual to Labor and Delivery* Elsevier Health Sciences

It has been enormously satisfying to prepare the third edition of Anesthetic and Obstetric Management of High-Risk Pregnancy because it fulfills the need for

close communication between two specialties, anesthesiology and obstetrics. This relationship is necessary not only to take care of the sick parturient, but also to deliver a healthy baby. New developments in obstetrics and in obstetric anesthesia necessitated this third edition. Most of the contributors to this edition are new, and they have provided information on the latest approaches, as well as updated information. In addition, Chapter 13, "Critical Care Anesthesia for High-Risk Parturients," is completely new. Like earlier editions, the third edition includes contributions from an international team of experts in the field of obstetric anesthesia and obstetrics. I thank all the authors for their valuable contributions. The authors have expressed their own

opinions and recommendations, which do not necessarily reflect my own views. I also wish to thank Ms. Elizabeth Kiernan for her endless help in completing the new edition. I sincerely hope this edition will further reinforce the concept of the team approach for taking care of the high-risk parturient.
