Research Reports

Germany's economic miracle is a widely-known phenomenon, and the world-leading, innovative products and services associated with German companies are something that others seek to imitate. In The 'Made in Germany' Champion

Brands, Ugesh A. Joseph provides an extensively researched, insightful look at over 200 of Germany's best brands to see what they stand for, what has made them what they are today, and what might be transferable. The way Germany is branded as a nation carries across into the branding of its companies and services, particularly the global superstar brands - truly world-class in size,

performance and reputation. Just as important are the medium-sized and small enterprises, known as the 'Mittelstand'. These innovative and successful enterprises from a wide range of industries and product / service categories are amongst the World market leaders in their own niche and play a huge part in making Germany what it is today. The book also

focuses on German industrial entrepreneurship and a selection of innovative and emergent stars. All these companies are supported and encouraged by a sophisticated infrastructure of facilitators, influencers and enhancers - the research, industry, trade and standards organizations, the fairs and exhibitions and all the social and cultural factors that influence, enhance and add positive value to the country's image.

Professionals or academics interested in business; entrepreneurship; branding and marketing; product or service development; international trade and business development policy, will find fascinating insights in this book; while those with an interest in Germany from emerging industrial economies will learn something of the secrets of German success.

This report attempts to identify the ways in which the ownership and development of the motor car affected life in the English country house in the 20th century. Special reference is made to the buildings constructed and converted to house and maintain this new form of transport.

This book constitutes the refereed proceedings of the Seventh International Workshop on Software Configuration Management, SCM-7, held

in conjunction with the 1997 IEEE/CS International Conference on Software Engineering, ICSE'97, in Boston, MA, USA, in May 1997. The book presents 16 revised full papers selected from a total of 49 submissions. The papers are organized in sections on versioning models, reuse and system models, process aspects, distributed SCM, SCM on the Web, and industrial experience, This book competently reports the state of the art in software configuration management.

"The process presented by the author can be applied to any project, whether it be building a garage or planting a garden. The examples presented provide a clear and concise picture of the complete set of activities, how the responsible parties interact, and which products are the desired outcome for each activity."--BOOK JACKET.

This book is also available through the Introductory Engineering Custom Publishing System. If you are interested in creating a course-pack that includes chapters from this book, you can get further information by calling 212-850-6272 or sending email inquiries to engineer@jwiley.com. Examines the roots of engineering through its modern development. Describes functions and career paths for various branches of engineering, professional

responsibilities, ethics, purpose and importance of engineering societies. Discusses engineering design methods along with techniques commonly used to solve problems. Provides recommended procedures for handling engineering data. Includes two case studies, one of which deals with the circumstances and events leading to the space shuttle Challenger accident.

Broad coverage of digital product creation, from

design to manufacture and process optimization. This book addresses the need to provide up-to-date coverage of current CAD/CAM usage and implementation. It covers, in one source, the entire design-to-manufacture process, reflecting the industry trend to further integrate CAD and CAM into a single, unified process. It also updates the computer aided design theory and methods in modern manufacturing systems and examines the most advanced computer-aided

tools used in digital manufacturing. Computer Aided Design and Manufacturing consists of three parts. The first part on Computer Aided Design (CAD) offers the chapters on Geometric Modelling; Knowledge Based Engineering; Platforming Technology; Reverse Engineering; and Motion Simulation. The second part on Computer Aided Manufacturing (CAM) covers Group Technology and Cellular Manufacturing; Computer Aided Fixture Design; Computer Aided

Manufacturing; Simulation of Manufacturing Processes; and Computer Aided Design of Tools, Dies and Molds (TDM). The final part includes the chapters on Digital Manufacturing; Additive Manufacturing; and Design for Sustainability. The book is also featured for being uniquely structured to classify and align engineering disciplines and computer aided technologies from the perspective of the design needs in whole product life cycles, utilizing a comprehensive

Solidworks package (add-ins, toolbox, and library) to showcase the most critical functionalities of modern computer aided tools, and presenting real-world design projects and case studies so that readers can gain CAD and CAM problem-solving skills upon the CAD/CAM theory. Computer Aided Design and Manufacturing is an ideal textbook for undergraduate and graduate students in mechanical engineering, manufacturing engineering, and industrial engineering. It

can also be used as a technical reference for researchers and engineers in mechanical and manufacturing engineering or computer-aided technologies.

Work smarter, not harder.
The first guide to truly holistic health and fitness for those in their 40s From Tom Brady to Serena Williams, Tiger Woods and Roger Federer athletes

are increasingly peaking later in their careers. Let Dr Marc Bubbs be your personal trainer in this accessible guide— aimed exclusively at those in their 40s. Create a customized program that works for YOU—from diet, to sleep, type of training and mindset, this book has all the tools you need. Peak 40 is for anyone wanting to rediscover the best version of themselves coming into their 40s. Author Dr Marc Bubbs is a performance nutritionist with a portfolio of professional and

Olympic athletes - but he is also the dad of three girls, all under 7! Dr. Bubbs is here with you, in the eye of the mid-life storm, and he has created the ultimate book to help you through it. For fans of Joe Wicks and Michael Mosley, Dr. Bubbs offers simple, evidence-based and time-efficient strategies to help you reignite your energy and passion. His realistic, grown-up and non-judgemental approach is to explain the effect some food groups and lack of exercise and sleep have

on our body. The information presented is easy to digest and he offers advice that can be tailored to your body and personality type. In his expert opinion, small changes such as 'not eating after 8pm for five out of seven days' can have a big impact on weight loss and positive mood. Rather than eliminating certain food groups like fats and carbohydrates, he looks at 'turning the dial' on them depending on individual needs. If life has become too sedentary, he

provides ways to increase suppleness so that you can start to reintroduce movement into your life without causing pain. Guiding us through the myriad of confusion lifestyle messages, Dr. Bubbs teaches us: How to increase flexibility How to train with achy joints, knees, back, shoulders... Whether a plant-based diet is right How to maintain bone health Whether to lift weights Who should do HIIT (and who shouldn't) The importance of glucose control in your diet Advice

on dealing with anxiety and low mood How to set realistic expectations "[Bubbs] dives into the nutrition and science—where it's been and where it's heading."—Zack Bitter, world record-holding ultra marathoner, as heard on "The Joe Rogan Experience" "Dr. Bubbs's advice on nutrition, health, and recovery for peak performance has been a game changer!"—Kevin Pangos, point guard, Barcelona FC Basketball

Learning, teaching and doing research for more than four decades in both the developing and developed societies gave me a little bit insight into the problems and their possible solutions in some of the developing

societies. To combat the socioeconomic and attitudinal complications in these societies, students, teachers, media, policymakers and civil society can play a key role if guided properly which is the main focus of this book. For students and researchers, the communication, generation and application of knowledge have been explained in the simplest possible words and various ways to optimize the utilization of the available resources and relevant issues have

been highlighted. Coming back from developed societies to public sector institutions in developing countries and the consequent victimizations at the hands of the most qualified and experienced nation builders and authorities taught me a lot. These stories are now known to everyone and must be addressed by the quarters concerned to avoid further academic losses and the consequent hurdles in socioeconomic development. Instead of telling these stories, the

younger generation should learn to push aside the muddy water and swim forward for a bright future. My experience demonstrates the ultimate failure of the evil minds and their tactics who tried their best to force me to do WHAT THE ROMANS NEVER DID. I succeeded in establishing a good research laboratory and training and mentoring of many students despite many hurdles. This proved that there are still some sincere people in these societies and if the young

teachers and students work hard, they can achieve whatever they endeavor for. Work hard with honesty and sincerity and the future will be certainly yours. The problems of the developing societies are almost similar; therefore, an introduction to the socio-political and economic background of Khyber Pukhtunkhwa followed by its natural resources and possible utilization is given as a model in the last two chapters which may be useful for all those having

similar potentials and issues. Prof. Yaseen Iqbal, C.Eng., FInstP (IOP, UK), PE (PEC) MSc (Physics), PhD (Eng. Materials, England) Chairman, Department of Physics, University of Peshawar, Pakistan

 SIMATIC is the worldwide established automation system for implementing industrial control systems for machines, manufacturing plants and industrial processes. Relevant open-loop and closed-loop control tasks are formulated in various programming languages with the programming software STEP 7. Now in its fifth edition, this book gives an introduction into

the latest version of STEP 7. It describes elements and applications for use with both SIMATIC S7-300 and SIMATIC S7-400, including the applications with PROFINET and for communication over industrial Ethernet. It is aimed at all users of SIMATIC S7 controllers. First-time users are introduced to the field of programmable controllers, while advanced users learn about specific applications of the SIMATIC S7 automation system. All programming examples found in the

book - and even a few extra examples - are available at the download area of the publisher's website: www.publicis.de/books *Nation Branding, Innovation and World Export Leadership* Springer Science & Business Media This edited volume provides an essential resource for urban morphology, the study of urban forms and structures, offering a much-needed mathematical perspective. Experts on a

variety of mathematical modeling techniques provide new insights into specific aspects of the field, such as street networks, sustainability, and urban growth. The chapters collected here make a clear case for the importance of tools and methods to understand, model, and simulate the formation and evolution of cities. The chapters cover a wide variety of topics in urban morphology, and are conveniently organized by their mathematical principles. The first part covers

fractals and focuses on how self-similar structures sort themselves out through competition. This is followed by a section on cellular automata, and includes chapters exploring how they generate fractal forms. Networks are the focus of the third part, which includes street networks and other forms as well. Chapters that examine complexity and its relation to urban structures are in part four. The fifth part introduces a variety of other quantitative models

that can be used to study urban morphology. In the book's final section, a series of multidisciplinary commentaries offers readers new ways of looking at the relationship between mathematics and urban forms. Being the first book on this topic, *Mathematics of Urban Morphology* will be an invaluable resource for applied mathematicians and anyone studying urban morphology. Additionally, anyone who is interested in cities from the angle of economics, sociology, architecture, or

geography will also find it useful. "This book provides a useful perspective on the state of the art with respect to urban morphology in general and mathematics as tools and frames to disentangle the ideas that pervade arguments about form and function in particular. There is much to absorb in the pages that follow and there are many pointers to ways in which these ideas can be linked to related theories of cities, urban design and urban policy analysis as well as new movements

such as the role of computation in cities and the idea of the smart city. Much food for thought. Read on, digest, enjoy." From the foreword by Michael Batty

This volume presents a unique combination of modeling and solving real world optimization problems. It is the only book which treats systematically the major modeling languages and systems used to solve

mathematical optimization problems, and it also provides a useful overview and orientation of today's modeling languages in mathematical optimization. It demonstrates the strengths and characteristic features of such languages and provides a bridge for researchers, practitioners and students into a new world: solving real optimization problems with the most advances modeling systems. This book constitutes the thoroughly refereed post-conference proceedings of the 9th International Workshop on Graphics Recognition (GREC 2011), held in Seoul, Korea, September 15-16, 2011. The 25 revised full papers presented were carefully selected from numerous submissions. Graphics recognition is a subfield of document image analysis that deals with graphical

entities in engineering drawings, sketches, maps, architectural plans, musical scores, mathematical notation, tables, and diagrams. Accordingly the conference papers are organized in 5 technical sessions, covering the topics such as map and ancient documents, symbol and logo recognition, sketch and drawings, performance evaluation and challenge processing.

Springer Science & Business Media

Thirty years ago, computers seemed more science fiction than business fact. Today we have e-commerce, e-marketing, computerized scheduling, manufacturing, and a

whole new field called information technology. Computers now have applications for every facet of your business. *Information Systems and Technology for the Non-Information Systems Executive* explores the practical and efficient use of computer technology—both software and hardware—for all types of business applications. In a simple and reader friendly style Shim presents information on data bases, networking, and telecommunications. He explains popular

accounting, tax, finance, management, manufacturing, and marketing software—making them easy to understand and use. In addition, he provides real-life examples that illustrate the applications of decision support systems, executive information systems, and artificial intelligence systems such as financial modeling, budgeting, strategic planning and control, forecasting, data analysis, inventory planning, and optimization software. You

do not need to know programming to understand your information systems.

Written for business managers and entrepreneurs who may not have extensive computer experience, Information Systems and Technology for the Non-

Information Systems Executive: An Integrated Resource Management Guide for the 21st Century covers information systems in all phases and functional areas of business to help you make the best decisions. It provides a wealth of current and

essential information for managers and executives of all types of organizations. Your success depends on keeping abreast of the latest applications and thinking in information technology. This book gives you the competitive edge.
