The earliest rockets were solid-fuel rockets powered by gunpowder; they were used in warfare by the Chinese, Indians, Mongols and Persians, as early as the 13th century. THE CHEMISTRY OF SOLID PROPELLANT

COMBUSTION: NITRATE ...

Unstable combustion of solid rocket propellants is of interest for two reasons: first, it is one of several methods available for investigating the structure of the solid propellant combustion and, second, unstable combustion has presented serious problems in the development of some operational solid propellant rocket motors.

Combustion of Solid Propellants - Stanford University

Most chemical propellants release energy through redox chemistry, more specifically combustion.

As such, both an oxidizing agent and a reducing agent must be present in the fuel mixture.

Decomposition, such as that of highly unstable peroxide bonds in monopropellant rockets, can also be the source of energy.
