 This book provides a comprehensive analysis of female terrorism in America, both past and present. The volume takes a fresh look at women's actions of left-wing political violence, right-wing political violence, and religious extremist violence (among others). It also examines the multitude of roles that women have played over the past few decades in such organizations (including leadership positions and more passive roles)—not to mention the diverse methods of recruitment, radicalization, and propaganda. The objective of this book is to examine—using a wide range of case studies, facts, statistics, and theoretical

methodologies—how collective or personal factors have influenced or reinforced the actions that these women take. Government agencies continue to underestimate the ability of women to support and perpetrate terrorism. As such, the United States is facing a wholly inaccurate and incomplete picture of the complexities of domestic terrorism, and this is contributing to a serious neglect of the issue at the national level. This volume ultimately aims to offer policy-relevant solutions to decrease the threat of domestic female political violence in the United States. *Female Terrorism in America* will be of much interest to students of terrorism and political violence, American politics, gender studies, and sociology.

Diseases and Husbandry of Cattle Henry Holt and Company

By the co-writer of the HBO miniseries *The Night Of* Richard Price's New York Times bestseller, *The Whites*, is an electrifying tale of a New York City police detective under siege-by an unsolved murder, by his own dark past, and by a violent stalker seeking revenge. Back in the run-and-gun days of the mid-1990s, when a young Billy Graves worked in the South Bronx as part of an aggressive anti-crime unit known as the Wild Geese, he made headlines by accidentally shooting a ten-year-old boy while struggling with an angel-dusted berserker on a crowded street. Branded as a loose cannon by his higher-ups, Billy spent years enduring one dead-end posting after another. Now in his early forties, he has somehow survived and become a sergeant in Manhattan Night Watch, a small team of detectives charged with responding to all post-midnight felonies from Wall Street to Harlem. Mostly, his unit acts as little more than a set-up crew for the incoming shift, but after years in police purgatory, Billy is content simply to do his job. Then comes a call that changes everything: Night Watch is summoned to the four a.m. fatal slashing of a man in Penn Station, and this time Billy's investigation moves beyond the usual handoff to the day tour. And when he discovers that the victim was once a suspect in the unsolved murder of a twelve-year-old boy—a savage case with connections to the former members of the Wild Geese—the bad old days are back in Billy's life with a vengeance, tearing apart enduring friendships forged in the urban trenches and even threatening the safety of his family. Razor-sharp and propulsively

written, *The Whites* introduces Harry Brandt—a new master of American crime fiction.

"If you buy just one health book this year, then get *The Lucky Years*" (Howard Stern). In this groundbreaking guide, bestselling author David Agus shows how we can take control of our health like never before in the brave new world of medicine. In his first bestseller, *The End of Illness*, David Agus revealed how to add vibrant years to your life by knowing the real facts of health. In *The Lucky Years*, he builds on that theme by showing why this is the luckiest time yet to be alive, giving you the keys to a new kingdom of wellness. In this new golden age, you'll be able to take full advantage of the latest science and technologies to customize your care. Imagine being able to: edit your DNA to increase a healthy lifespan; use simple technologies to avoid or control chronic conditions like pain, depression, high blood pressure, and diabetes; prolong natural fertility and have children in your forties; lose weight effortlessly without a trendy diet; reverse aging to look, feel, and physically be ten years younger; and turn cancer into a manageable condition you can live with indefinitely. That's the picture of the future that you can enter—starting today. With "practical health information fortified with exciting news from the forefront of modern medical technology" (Kirkus Reviews), this is an essential, important read. "If you have

made a new year's resolution to get healthier, you'll find a buddy in David B. Agus's new book" (The Boston Globe). Welcome to the Lucky Years.

Revision Notes for the FRCEM Primary Manchester University Press

This book gets to the heart of what radiology is and what radiologists do. As a relatively young speciality, there is no guide for radiologists to act as a moral compass. Until now, that is. You will not find any dry technical matters in here. You will not find any clues about how to interpret images better. This book details the 'other 50%': the rest of the working week when a radiologist is not reading scans or performing procedures. The essence of radiology is distilled and offered up to the reader. If you want a comfortable read that offers bland reassurances, look elsewhere. If you want a book that questions everything and discusses uncomfortable truths, this is the book for you. Each of the Rules addresses an important part of professional practice. This book is a manifesto for all radiologists across the globe to raise their game, to be more effective and to serve their patients better.

The range of topics which you may be questioned on during a final ENT Viva exam can be very varied. Viva Training in ENT ensures you can answer any question confidently and comprehensively, this book provides you with over 430

examples, mirroring exactly the format of the examination questions and covering all the relevant areas of the curriculum. Dedicated chapters on topics such as rhinology, head and neck, otology and paediatrics take you through the types of scenarios that you are likely to face, often presenting you with a clinical example and asking you a range of questions to test not only your diagnostic skills, but also your supporting knowledge. Three further chapters cover the clinical section of the exam involving patients, and the operative surgery and communication skills stations. These chapters provide both example scenarios and general advice on how to impress the examiners, giving you a thorough grounding in how best to communicate your knowledge and complete tasks calmly and methodically. For each question, detailed model answers and explanatory notes are provided, along with links to relevant websites and key journal articles for further reference. Questions are supplemented with over 85 illustrations and photographs, allowing you to review real examples of the conditions about which you will be questioned. For any candidate wishing to complete the FRCS (ORL-HNS) or the DOHNS Viva with professionalism and a real depth of knowledge, this book's detail and variety of information will be invaluable. Its clear layout and topical structure also make it ideal for surgeons wishing to refresh their clinical knowledge.

The Oxford Textbook of Palliative Nursing remains the most comprehensive treatise on the art and science of palliative care nursing available. Dr. Betty Rolling Ferrell and Dr. Judith A. Paice have invited 162 nursing experts to contribute 76 chapters addressing the physical, psychological, social, and spiritual needs pertinent to the successful palliative care team. Organized within 7 Sections, this new edition covers the gamut of principles of care: from the time of initial diagnosis of a serious illness to the end of a patient's life and beyond. This fifth edition features several new chapters, including chapters on advance care planning, organ donation, self-care, global palliative care, and the ethos of palliative nursing. Each chapter is rich with tables and figures, case examples for improved learning, and a strong evidence-based practice to support the highest quality of care. The book offers a valuable and practical resource for students and clinicians across all settings of care. The content is relevant for specialty hospice agencies and palliative care programs, as well as generalist knowledge for schools of

nursing, oncology, critical care, and pediatric. Developed with the intention of emphasizing the need to extend palliative care beyond the specialty to be integrated in all settings and by all clinicians caring for the seriously ill, this new edition will continue to serve as the cornerstone of palliative care education.

Adam is in Antarctica, marking the passage of the solstice. Across the globe, his wife Ellie is waiting for the results of her IVF treatment. So begins the story of one family in a changing world, where the apocalyptic mingles with the everyday; a father battles a biblical storm; an immigrant is mysteriously drawn to the art of beekeeping; a young girl's diary chronicles a pandemic; and a young man finds solace in building virtual recreations of the dead...

How a Concussion Stole My Life and How the New Science of Brain Plasticity Helped Me Get it Back SAGE

In the past half century, deadly disease outbreaks caused by novel viruses of animal origin - Nipah virus in Malaysia, Hendra virus in Australia, Hantavirus in the United States, Ebola virus in Africa, along with HIV (human immunodeficiency virus), several influenza subtypes, and the SARS (sudden acute respiratory syndrome) and MERS (Middle East respiratory syndrome) coronaviruses - have underscored the urgency of understanding factors influencing viral disease emergence and spread. Emerging Viral Diseases is the summary of a public workshop hosted in March 2014 to examine factors driving the appearance, establishment, and spread of emerging, re-emerging and novel viral diseases; the global health and economic impacts of recently emerging and novel viral diseases in humans; and the scientific and policy approaches to improving domestic and international capacity to detect and respond to global outbreaks of infectious disease. This report is a record of the presentations and discussion of the event.

A 32-year-old Caucasian lady was admitted to hospital following a collapse at the gym. Her friends described the patient falling to the floor while exercising on the rowing machine, followed by twitching of her arms and legs and a period of being unrousable. You are the medic on duty... 100 Cases in Acute Medicine presents 100 acute conditions commonly seen by medical students and junior doctors in the emergency department, or on the ward, or in the community setting. A succinct summary of the patient's history,

examination, and initial investigations, including photographs where relevant, is followed by questions on the diagnosis and management of each case. The answer includes a detailed discussion of each topic, with further illustration where appropriate, providing an essential revision aid as well as a practical guide for students and junior doctors. Making clinical decisions and choosing the best course of action is one of the most challenging and difficult parts of training to become a doctor. These cases will teach students and junior doctors to recognize important clinical symptoms and signs, and to develop their diagnostic and management skills.

Past and Current Perspectives Cambridge University Press

"This book is a revolution! It goes way beyond the beliefs that have fueled modern pharmaceutical medicine for decades and gives you all the science you'll ever need to prove that there is another way." - Christiane Northrup, M.D., New York Times bestselling author of *Goddesses Never Age* Modern medicine and human health are at a critical crossroads, and the truth is that you and not your genes are in the driver's seat. You are the one who gets to make informed decisions on how you use and nourish the evolutionary miracle that is your body. Combining analysis of cutting-edge scientific findings with our deepest ancestral wisdom and health-promoting practices, Sayer Ji, founder of GreenMedInfo, offers a time-tested program to help prevent and manage the most common health afflictions of our day-cancer, heart disease, neurodegenerative diseases, and metabolic syndrome. Antiquated thinking and scientific dogma have long obstructed our understanding of our innate untapped potential for self-regeneration and radical healing. But the New Biology explains why biological time is not a downward spiral and how chronic illness is not inevitable when you implement nature's resiliency tools. In his thorough and thoughtful exploration of the New Biology, Sayer Ji illuminates: • the fascinating new science of food as information • the truth about cancer and heart disease screening and what real prevention looks like • how to reverse the most common forms of degeneration using food-based approaches • how the body extracts energy from sources other than food, including water and melanin; and • how to make sense of conflicting dietary recommendations and out-of-date food

philosophies Encoded within every tissue of your body is your ability to regenerate. Unlock your radical resiliency through this roadmap for diet, exercise, stress reduction, and the cultivation of the environment in which you choose to live. *Oxford Textbook of Geriatric Medicine* PublicAffairs

What can we really control throughout our lifetime that may have an impact on our health? The answer, to an extent, is: a lot. We can shape our environment to better deal with roadblocks. We can control how and how much we move. We can control what we choose to put into our mouths. We can choose the attitude and outlook we take with us each day. We can choose to let motivation elude us, or figure out new ways to regain it. We can choose who we spend most of our time with and the influence those people have on the decisions we make - with or without them around. Many people feel helpless when it comes to balancing these factors. It doesn't have to be difficult for it to last. It just has to be done in small, manageable steps. Learn, apply, evaluate, and adjust. *MOVE Better EAT Smarter LIVE Happier* Joseph A. Meier

"An engrossing exposé of scientific practice in America." —KIRKUS REVIEWS From the authors of the New York Times bestselling *Plague of Corruption* comes the prescription on how to end the plague infecting our medical community. Ending

Plague continues the New York Times bestselling team of Dr. Judy A. Mikovits and Kent Heckenlively with legendary scientist, Dr. Francis W. Ruscetti joining the conversation. Dr. Ruscetti is credited as one of the founding fathers of human retrovirology. In 1980, Dr. Ruscetti's team isolated the first pathogenic human retrovirus, HTLV-1. Ruscetti would eventually go on to work for thirty-eight years at the National Cancer Institute. Dr. Ruscetti was deeply involved in performing some of the most critical HIV-AIDS research in the 1980s, pioneered discoveries in understanding the workings of the human immune system in the 1990s, isolating a new family of mouse leukemia viruses linked to chronic diseases in 2009, and offers his insights into the recent COVID-19 pandemic. In 1991, Ruscetti received the Distinguished Service Award from the National Institutes of Health. Dr. Ruscetti offers a true insider's portrait of nearly four decades at the center of public health. His insights into the successes and failures of government science will be eye-opening to the general public. You will read never-before-revealed information about the personalities and arguments which have been kept from view behind the iron curtain of public health. Can we say our scientists are protecting us, or is another agenda at work? For most of his decades at the National Cancer Institute, Dr. Ruscetti has been in almost daily contact with his long-time collaborator, Dr.

Mikovits, and their rich intellectual discussions will greatly add to our national discussion. Science involves a rigorous search for truth, and you will come to understand how science scholars are relentless in their quest for answers.

The fourth edition of this popular Handbook provides the latest guidance on prescribing and administering electroconvulsive therapy (ECT). Leading researchers and practitioners review new research on ECT and related treatments, including their efficacy in children and adolescents, and in those with bipolar disorder and neurological conditions. With a focus on safe provision and minimisation of side effects, it provides the reader with practical, evidence-based advice. The book has been substantially revised: references have been updated throughout; related treatment modalities such as rTMS, tCDS and ketamine are covered in greater depth; and current administrative and legal framework guidelines are clearly outlined. An essential reference manual for consultant and trainee clinical psychiatrists, as well as ECT practitioners. This guide will benefit clinical teams looking after complex cases of depression, as well as those involved in the care of other people for whom ECT may be recommended.
