These bold goals can be met in all parts of the world if nations follow through on

their commitments to work together to meet them. Achieving the Millennium Development Goals offers the prospect of a more secure, just, and prosperous world for all. The UN Millennium Project was commissioned by United Nations Secretary-General Kofi Annan to develop a practical plan of action to meet the Millennium Development Goals. As an independent advisory body directed by Professor Jeffrey D. Sachs, the UN Millennium Project submitted its recommendations to the UN Secretary General in January 2005. The core of the UN Millennium Project's work has been carried out by 10 thematic Task Forces comprising more than 250 experts from around the world, including scientists, development practitioners, parliamentarians, policymakers, and representatives from civil society, UN agencies, the World Bank, the IMF, and the private sector. This report lays out the recommendations of the UN Millennium Project Task Force 5 Working Group on Access to Essential Medicine. The Working Group recommends increasing

the availability, affordability, and appropriate use of medicines in developing countries. This will require new incentives for research; better procurement, supply and distribution; strengthened primary health systems; pro-poor planning and budgeting; close collaboration with communities; and large increases in funding and the number of health workers. These bold yet practical approaches will ensure that substantially more people living in developing countries will have access to essential medicines by 2015.

HIV Essentials 2017 Jones & Bartlett Publishers

In the early 1980s it was discovered that HIV, the virus that causes AIDS, could be passed through a mother's milk to her baby. Almost overnight in the industrialised countries, and later in the African countries most ravaged by HIV, breastfeeding became an endangered practice. But in the rush to reduce transmission of HIV, everything we already knew about breastfeeding's life-saving effects was overlooked, with devastating consequences for mothers and babies. In *HIV and Breastfeeding: the untold story*, former IBCLC Pamela Morrison, an acknowledged authority on HIV and breastfeeding, reveals how women in the world's most poverty-stricken areas were persuaded to abandon

breastfeeding as part of a short-sighted and deadly policy that led to an humanitarian disaster. The dilemma that breastfeeding, an act of nurturing which confers food, comfort and love, could be at once life-saving yet lethal, has been called 'the ultimate paradox'. This critical account reveals how vital breastfeeding is, even in the most difficult of circumstances, and examines the lessons that can be learned from the mistakes of the past - which is particularly relevant as we deal with the consequences for mothers and babies of another global pandemic, Covid-19. With detailed information for HIV-positive mothers and their caregivers, and success stories from mothers themselves, this book is essential reading for anyone involved in protecting and supporting breastfeeding, or with a need for evidence-based information about breastfeeding and HIV.
