MCCARTHY ROY

Math for Kids & Other People Too! Wrexford & Sloane Mystery

When Lulu and Elizabeth find themselves in Camelot, they are expecting to meet King Arthur and the Knights of the Round Table. Instead, the twins enter the world of the Lily Maidens, an organization of women who travel through legends and time in pursuit of knowledge. But dark forces are uniting against the Kingdom; Merlin, the Black Pig, and a vast army of men and mythological beasts are marching for Camelot's gate. Only the magic of science, mathematics, and poetry can preserve honor's code and defend the Kingdom against the impending onslaught of evil.

There s a new amusement park in town. Come on in and find out allthe exciting ways you can have fun with math in everyday life.Wander through the fractal forest, take a ride on the M?obius-striproller coaster, and get dizzy learning about how math makes theTilt-A-Whirl possible. The

more activities you try, the more you lllearn how cool it can be to see the world through the eyes of amathematician. Once you ve sampled some of the interesting and unique projects inMath Trek, from untangling unknots to winning games with weird diceto figuring out secret codes, you ll see that every trip to theMathZone is an exciting adventure!

Discovering the Spell of Mathematics Createspace Independent Publishing Platform

An illustrated tale about the adventures of a mathematical cat; introducing the concept of pi, symmetry, and multiplication through a series of puzzles, games, charts, worksheets, and tables.

A Complete Guide to the Laws of the Universe Wide World Pub Tetra

Twelve-year-old Robert hates his maths teacher. He sets his class boring problems and won't let them use their calculators. Then in his dreams Robert meets the Number Devil who brings the subject magically to life, illustrating with wit and charm a world in which numbers can amaze and fascinate, where maths is nothing like the dreary, difficult process that so many of us dread. The Number Devil knows how to make maths devilishly simple.

Math Trek Turtleback Books

Uses stories with fictional characters to make the concepts of math interesting and entertaining.

Original.

1 2 3 4 5 6 7 8 9 10 _ 12 What happened to 11? Is it in the magician's hat? Maybe it's in the mailbox or hiding in the jack-o'-lantern? Don't forget to look in the barnyard where the hen awaits the arrival of her new little chicks. Could that be where eleven went? Eve Merriam and Bernie Karlin take young readers on a counting adventure as they demonstrate twelve witty and imaginative ways to get to eleven.

Miro's Magic Animals Turtleback Books

A collection of stories about famous mathematicians and their very human background in the history of mathematics, including the paranoia of Godel and how Newton's apple never was *Mathematical Scandals* Wide World Pub Tetra Series order taken from author's website.

Discovering Mathematical Impressions All Around Us Penguin

Penrose the cat explores and experiences a variety of mathematical concepts, including infinity, the golden rectangle, and impossible figures.

Puzzles from Penrose the Mathematical Cat Simon & Schuster

Holyhedrons - e-paper and mathematics - Icosa shelters.

About Teaching Mathematics Wide World Pub Tetra

The bestselling author of *The Dante Club* takes us deep into a shadowy era in publishing ruled by a forgotten class of criminals. A golden age of publishing on the verge of collapse. For a hundred years, loose copyright laws and a hungry reading public created a unique opportunity: Books could be published without an author's permission with extraordinary ease. Authors gained fame but suffered financially. Charles Dickens, Mark Twain, Robert Louis Stevenson, to name a few, but publishers reaped enormous profits while readers got their books on the cheap. The literary pirates who stalked the harbors, coffeehouses, and printer shops for the latest manuscript to steal were known as bookaneers. Yet on the eve of the twentieth century, a new international treaty is signed to protect authors and grind this literary underground to a sharp halt. The bookaneers, of course, would become extinct. In *The Last Bookaneer*, Matthew Pearl gives us a historical novel set inside the lost world of these doomed outlaws and the incredible heist that brought their era to a close. On the island of Samoa, a dying Robert Louis Stevenson labors over a new novel. The thought of one last book from the great author fires the imaginations of the bookaneers, and soon two adversaries—the gallant Pen Davenport and the monstrous Belial—set out for the south Pacific island. Pen Davenport—a tortured criminal genius haunted by his past—is reluctantly accompanied by Fergins, the narrator of our story, who has lived a quiet life of bookselling before being whisked across the world on his friend's final caper. Fergins soon discovers the supreme thrill of aiding Davenport in his quest: to steal Stevenson's manuscript and make a fortune before the new treaty ends the bookaneers' trade forever. Yet Samoa holds many secrets of its own, and the duo's bookish concerns clash with the island's violent destiny. A colonial war is afoot between the British, American, and German powers; even as Stevenson himself quietly supports native revolutionaries from high in his mountain compound. Soon Pen and Fergins are embroiled in a conflict larger, perhaps, than literature itself. Illuminating the heroics of the bookaneers even while conjuring Stevenson himself to breathtaking life, Pearl's *The Last Bookaneer* is a pageturning journey to the dark heart of a forgotten literary era.

Daily Warm-Ups Reading Harper Collins

From two of the world's great physicists—Stephen Hawking and Nobel laureate Roger Penrose—a lively debate about the nature of space and time. Einstein said that the most incomprehensible thing about the universe is that it is comprehensible. But was he right? Can the quantum theory of fields and Einstein's general theory of relativity, the two most accurate and successful theories in all of physics, be united into a single quantum theory of gravity? Can quantum and cosmos ever be combined? In *The Nature of Space and Time*, two of the world's most famous physicists—Stephen Hawking (*A Brief History of Time*) and Roger Penrose (*The Road to Reality*)—debate these

questions. The authors outline how their positions have further diverged on a number of key issues, including the spatial geometry of the universe, inflationary versus cyclic theories of the cosmos, and the black-hole information-loss paradox. Though much progress has been made, Hawking and Penrose stress that physicists still have further to go in their quest for a quantum theory of gravity.

Murder at Kensington Palace Wide World Pub Tetra

Winner of multiple awards for educational fiction as well as quality fantasy, this charming story brings us the adventures of Julie in the Land of Mathematics. Julie is a young teen who struggles with her homework, especially math, until a mysterious Imaginary Number leads her into Mathematics. There she meets Al the gebra (who is like a zebra), and horses who represent elements on the Periodic chart. She sets off on a quest to find her way home, and in the process, learns the foundations of algebra and chemistry. Join Julie in her journey through Mathematics, where the Orders of Operations are actual places and chemistrees are real plants with atomic fruit. Will Julie ever get home? Written when the author was age fourteen, this work of fiction has been used in various school systems throughout the U.S. to help supplement cross-curriculum learning. It can also be enjoyed as light fantasy reading.

How Families Can Learn Math Together—and Enjoy It John Wiley & Sons

Part of the dynamic reading programme Project X, this book is truly boy-friendly. Project X is a reading programme that has been developed based on research into what will really hook boys into reading and make them love books. Project X includes fiction and non-fiction, exciting adventure stories, lots of gadgets, and 21st-century illustrations. Each book comes with notes for parent/teaching assistants that highlight tricky words or concepts in the books, prompt questions and suggest a range of follow-up activities.

Mr Tompkins in Paperback Wide World Pub Tetra

An 18th century sailor is cast away in a multi-ethnic New World in this long-neglected classic regarded as the first American novel ever written. Mr. Penrose narrates the adventures of a Llewellyn Penrose who flees an unhappy home life to seek his fortune on the high seas. Having learned the sailor's trade, Penrose survives a series of nautical mishaps, only to be cast adrift on the Mosquito Coast. When rescue finally comes, Penrose refuses to abandon the new home he has made among the Indians. Though not officially published until 1815—posthumously and bowdlerized—painter and seafarer William Williams's dynamic adventure was actually written before 1780, making it unjustly forgotten as, arguably, the first American novel. Publishers may have been wary of “a work of imagination”, but Lord Byron could barely contain his enthusiasm for this unique tale: “I have never read so much of a book in one sitting in my life. He kept me up half the night, and made me dream of him the other half.” Equal parts travel narrative, sea-merchant

yarn and historical document, this original version of Mr. Penrose reflects on some of the most pressing moral and social issues of its time: imperialism, racial equality, religious freedom, and the nature of an ethical government. In fact, it contains the first unequivocal critique of slavery in a transatlantic novel and the most realistic portrayals of Native Americans in early American fiction. In the afterword, Sarah Wadsworth imparts new research on the author and his career, shedding light on the novel's subjects and timely themes, and situating Mr. Penrose at the forefront of the American literary canon.
