THE HUMAN RECORD is the leading primary source reader for the World History course, providing balanced coverage of the global past. Each volume contains a blend of visual and textual sources which are often paired or grouped together for comparison. A prologue entitled Primary Sources and How to Read Them appears in each volume and serves as a valuable pedagogical tool. Approximately one-third of the sources in the Seventh Edition are new, and these documents continue to reflect the myriad experiences of the peoples of the world. Societies, Networks, and Transitions is a world history text that connects the different regions of the world through global themes. This innovative structure combines the accessibility of a regional approach with the rigor of comparative scholarship to show students world history in a truly global framework. The text also features a strong focus on culture and religion. Author and veteran teacher Craig Lockard engages students with a unique approach to cultural artifacts such as music and art. A range of pedagogical features--including focus questions, section summaries, and web-based

study aids--supports students and instructors as they explore the interconnectedness of different people, places, and periods in the global past.

Modelling Transitions shows what computational, formal and data-driven approaches can and could mean for sustainability transitions research, presenting the state-of-the-art and exploring what lies beyond. Featuring contributions from many well-known authors, this book presents the various benefits of modelling for transitions research. More than just taking stock, it also critically examines what modelling of transformative change means and could mean for transitions research and for other disciplines that study societal changes. This includes identifying a variety of approaches currently not part of the portfolios of transitions modellers. Far from only singing praise, critical methodological and philosophical introspection are key aspects of this important book. This book speaks to modellers and non-modellers alike who value the development of robust knowledge on transitions to sustainability, including colleagues in congenial fields. Be they students, researchers or practitioners, everyone interested in transitions should find this book relevant as reference, resource and guide.

This volume examines the visual culture of Japan's transition to modernity, from 1868 to the first decades of the twentieth century. Through this important moment in Japanese history, contributors reflect on Japan's transcultural artistic imagination vis-a-vis the discernment, negotiation,

assimilation, and assemblage of diverse aesthetic concepts and visual pursuits. The collected chapters show how new cultural notions were partially modified and integrated to become the artistic methods of modern Japan, based on the hybridization of major ideologies, visualities, technologies, productions, formulations, and modes of representation. The book presents case studies of creative transformation demonstrating how new concepts and methods were perceived and altered to match views and theories prevalent in Meiji Japan, and by what means different practitioners negotiated between their existing skills and the knowledge generated from incoming ideas to create innovative modes of practice and representation that reflected the specificity of modern Japanese artistic circumstances. The book will be of interest to scholars working in art history, Japanese studies, Asian studies, and Japanese history, as well as those who use approaches and methods related to globalization, cross-cultural studies, transcultural exchange, and interdisciplinary studies.

The rock era is over, according to one pop music expert. Another laments that rock music is "metamorphosed into the musical wallpaper of ten thousand lifts, hotel foyers, shopping centers, airport lounges, and television advertisements that await us in the 1990s." Whatever its current role and significance in Anglo-American society, popular music has been and remains a tremendous social and cultural force in many parts of the world. This book explores the connections between popular music genres and politics in Southeast Asia, with particular emphasis on Indonesia, the Philippines, Thailand, Malaysia, and Singapore.

SOCIETIES, NETWORKS, AND TRANSITIONS connects the different regions of the world between chapters, and explores broader global themes in part-ending essays. This innovative structure combines the accessibility of a regional approach with the rigor of comparative scholarship to show students world history in a truly global framework. The tree, tree, tree, forest organization assures that students stay engaged and sure of when and where they are in their study of world history. The text also features a strong focus on culture and religion. Author and veteran teacher Craig Lockard engages students with a unique approach to cultural artifacts; such as, music and art. A range of pedagogical features--including focus questions, section summaries, and web-based study aids--support students and instructors as they explore the interconnectedness of different people, places, and periods in the global past. The Second Edition features all new maps--beautiful to look at and learn with--and an open, student-friendly design. Additionally, the text has been extensively revised to sharpen the narrative. This book uses money as a lens through which to analyze the social and economic impact of colonialism on African societies and institutions. It is the first book to address the monetary history of the colonial period in a comprehensive way, covering several areas of the continent and different periods, with the ultimate aim of understanding the long-term impact of colonial monetary policies on African societies. While grounding an understanding of money in terms of its circulation, acceptance and impact, this book shows first and foremost how the monetary systems that resulted from the imposition of colonial rule on African societies were not a replacement of the old currency systems with entirely new ones, but were rather the result of the convergence of different orders of value and monetary practices. By putting histories of people using money at the heart of the story, and connecting them to larger imperial policies, the volume provides a new and fresh perspective on the history of the establishment of colonial rule in Africa. This book is the result of a collaborative and interdisciplinary research project that has received funding by the Gerda Henkel Foundation. The contributors are both junior and senior scholars, based at universities in Europe, Africa, Asia and the US, who are all specialists on the

history of money in Africa. It will appeal to an international audience of scholars and educators interested in African Studies and History, Economic History, Imperial and Colonial History, Development Studies, Monetary Studies.

Exploring history in global framework, Lockard's SOCIETIES, NETWORKS, AND TRANSITIONS, VOLUME II: SINCE 1450: A GLOBAL HISTORY, Fourth Edition, combines the accessibility and cultural richness of a regional approach with the rigor of comparative scholarship. Emphasizing culture, social change, gender issues, economic patterns, science and religion, it helps you unravel the connections, encounters, cooperation and conflicts of world and regional history. The author includes profiles of individuals from various walks of life as well as highlights social life and cultural artifacts such as music, literature and art. Extensively revised, the text incorporates recent scholarship throughout, examines various debates among historians and explains how historians use original documents. Insightful questions help you reflect on the historical significance of text material -- and how it relates to you. How do ant colonies get anything done, when no one is in charge? An ant colony operates without a central control or hierarchy, and no ant directs another. Instead, ants decide what to do based on the rate, rhythm, and pattern of individual encounters and interactions--resulting in a dynamic network that coordinates the functions of the colony. Ant Encounters provides a revealing and accessible look into ant behavior from this complex systems perspective. Focusing on the moment-to-moment behavior of ant colonies, Deborah Gordon investigates the role of interaction networks in regulating colony behavior and relations among ant colonies. She shows how ant behavior within and between colonies arises from local interactions of individuals, and how interaction networks develop as a colony grows older and larger. The more rapidly ants react to their encounters, the more sensitively the entire colony responds to changing conditions. Gordon explores whether such reactive networks help a colony to survive and reproduce, how natural selection shapes colony networks, and how these structures compare to other analogous complex systems. Ant Encounters sheds light on the organizational behavior, ecology, and evolution of these diverse and ubiquitous social insects.

Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the Internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.

*Phase Transitions* Cengage Learning

Phase transitions--changes between different states of organization in a complex system--have long helped to explain physics concepts, such as why water freezes into a solid or boils to become a gas. How might phase transitions shed light on important problems in biological and ecological complex systems? Exploring the origins and implications of sudden changes in nature and society, Phase Transitions examines different dynamical behaviors in a broad range of complex systems. Using a compelling set of examples, from gene networks and ant colonies to human language and the degradation

of diverse ecosystems, the book illustrates the power of simple models to reveal how phase transitions occur. Introductory chapters provide the critical concepts and the simplest mathematical techniques required to study phase transitions. In a series of example-driven chapters, Ricard Solé shows how such concepts and techniques can be applied to the analysis and prediction of complex system behavior, including the origins of life, viral replication, epidemics, language evolution, and the emergence and breakdown of societies. Written at an undergraduate mathematical level, this book provides the essential theoretical tools and foundations required to develop basic models to explain collective phase transitions for a wide variety of ecosystems.

Praised for its teachability, Thinking Through Communication provides an excellent, balanced introduction to basic theories and principles of communication, making sense of a complex field through a variety of approaches. In an organized and coherent manner, Thinking Through Communication covers a full range of topics- from the history of communication study to the methods used by current communication scholars to understand human interaction. The text explores communication in a variety of traditional contexts: interpersonal, group, organizational, public, intercultural, computer-mediated communication and the mass media. This edition also offers new insights into public speaking and listening. This text can be used successfully in both theory- and skills-based courses. Written in a clear, lively style, Trenholm's overall approach-including her use of examples and interesting illustrations-helps both majors and non-majors alike develop a better understanding of communication as a field of study and an appreciation for ways in which communication impacts their daily lives.
