SECTION STRUCTURE OF DNA 8.2 Study Guide - Quia Section
 Structure Of Dna 8SECTION. 8.2. STRUCTURE OF DNA.

Reinforcement. KEY CONCEPT. DNA structure is the same in all organisms. DNA is a chain of nucleotides. In DNA, each nucleotide. is made of a phosphate group, a sugar called deoxyribose, and one of four nitrogen-containing bases. These four bases are cytosine (C), thymine (T), adenine (A), and guanine (G). Two of ...SECTION IDENTIFYING DNA AS THE

1. enzymes unzip the double helix in two directions at the same time
2. nucleotides pair with the exposed bases on the template strands;
3. DNA polymerase bonds the new nucleotides together ;
4. Chapter 8 Power Notes Answer Key Section 8

DNA is perhaps the most famous molecule on earth. Here we explain

what it is, what it does, its double helix structure, and why it is so important to life.

DNA explained: Structure and function

DNA is a long polymer made from repeating units called nucleotides, each of which is usually symbolized by a single letter: either A, T, C, or G. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds.

In *Mechanisms of Microbial Genetics*, we will discuss in detail the ways in which DNA uses its own base sequence to direct its own synthesis, as well as the synthesis of RNA and proteins, which, in turn, gives rise to products with diverse structure and function. In this section, we will discuss the basic structure and function of DNA. DNA ...
