Social media platforms do not just circulate political ideas, they support manipulative disinformation campaigns. While some of these disinformation campaigns are carried out directly by individuals, most are waged by software, commonly known as bots, programmed to perform simple, repetitive, robotic tasks. Some social media bots collect and distribute legitimate information, while others communicate with and harass people, manipulate trending algorithms, and inundate systems with spam. Campaigns made up of bots, fake accounts, and trolls can be coordinated by one person, or a small group of people, to give the illusion of large-scale consensus. Some political regimes use political bots to silence opponents and to push official state messaging, to sway the vote during elections, and to defame critics, human rights defenders, civil society groups, and journalists. This book argues that such automation and platform manipulation, amounts to a new political communications mechanism that Samuel Woolley and Philip N. Noward call "computational propaganda." This differs from older styles of propaganda in that it uses algorithms, automation, and human curation to purposefully distribute misleading information over social media networks while it actively learns from and mimics real people so as to manipulate public opinion across a diverse

range of platforms and device networks. This book includes cases of computational propaganda from nine countries (both democratic and authoritarian) and four continents (North and South America, Europe, and Asia), covering propaganda efforts over a wide array of social media platforms and usage in different types of political processes (elections, referenda, and during political crises).

Foreword In April 1971, Los Angeles and its satellite cities were treated to one of its least interesting and least publicized elections in years. Nothing seemed to be hotly contested. A few Los Angeles city councilmen were up for reelection as were some members of the Board of Education and the Board of Trustees of the Community Colleges. - Nakanishi, Cooper and Kassarian [1974] Our colleague, Professor Harold H. Kassarian, ran for one of the seats on the Board of Trustees and received 17,286 votes. While he lost the election, he had collected the data which he felt characterized voting in such low-involvement cases. He asked us to join him in writing a follow-up to a study of a similar election which had been published the previous fall in Public Opinion Quarterly. Neither of us was content with the methods and models used in the prior study. Shares are different than other criteria, be they vote shares, market shares or retail stores' shares of customers. Different methods are needed to reflect their special nature. And thus began a research collaboration, running 17 years, so far. Though our combined research efforts have covered diverse areas of consumer choice behavior, in recent years we came to the realization that our models and analytical methods might be very profitably employed in the analysis of market-share figures for consumer products.

This is a print on demand edition of a hard to find publication. The annual cost of federal regulations in the U.S. increased to more than \$1.75 trillion in 2008. Had every U.S. household paid an equal share of the federal regulatory burden, each would have owed \$15,586 in 2008. While all citizens and businesses pay some portion of these costs, the distribution of the burden of regulations is quite uneven. The portion of regulatory costs that falls initially on businesses was \$8,086 per employee in 2008. Small businesses, defined as firms employing fewer than 20 employees, bear the largest burden of federal regulations. This report shows that as of 2008, small businesses face an annual regulatory cost of \$10,585 per employee, which is 36% higher than the regulatory cost facing large firms (500+ employees). III.

The History of the Standard Oil Company Cambridge University Press

Privatization is under attack. Beginning in the 1980s, thousands of failing state-owned enterprises worldwide have been turned over to the private sector. But public opinion has turned against privatization. A large political backlash has been brewing for some time, infused by accusations of corruption, abuse of market power, and neglect of the poor. What is the real record of privatization and are the criticisms justified? 'Privatization in Latin America' evaluates the empirical evidence on privatization in a region that has witnessed an extensive decline in the state's share of production over the past 20 years. The book is a compilation of recent studies that provide a comprehensive

analysis of the record of and accusations against privatization, with important recommendations for the future. Seven countries are investigated: Argentina, Bolivia, Brazil, Chile, Colombia, Mexico, and Peru. This book will be vital to anyone interested in the privatization debate but especially to those involved in civil service reform, corporate governance, economic policy, finance, and anticorruption efforts. 'Privatization is important but controversial. While economists typically favor it, others are skeptical. This book provides strong scientific evidence that privatization has been beneficial for many Latin American countries, although some privatizations failed and some groups in society lost out. As usual, the devil is in the details: how privatization is carried out and what reforms accompany it are crucial to its success. The book is definitely an invaluable contribution to the privatization debate.' --Oliver Hart, Andrew E. Furer Professor of Economics, Harvard University
