Contemporary Sociological Theory World Scientific
 Written by award-winning scholar, Jonathan Turner, *Contemporary Sociological Theory* covers the range of diversity of theory in nine theoretical traditions, and variants of theoretical approaches in these traditions. The result is a comprehensive review of present-day theorizing in sociology covering functional, evolutionary, ecological, conflict, interactionist, exchange, structuralist, cultural, and critical theories and the major proponents of these theories. Moreover, for each theoretical tradition, its origins are examined in a separate chapter with an eye to how classical theorists influenced the work of key contemporary scholars. This book will serve as a valuable resource for those readers seeking in-depth and comprehensive coverage of contemporary traditions in their historical contexts. Unlike many texts, coverage is comprehensive and deep. The theories and their origins are examined in detail so that readers can fully understand the origins and present profile of theories in present-day sociology. Unlike many texts that skim over theories on the surface, this book seeks to unlock for the reader their underlying structure of each theory. The book is written in a modular format so that theories and traditions can be examined in any order, and in many diverse combinations. If desired, only the contemporary theories can be read without attention to their historical contexts, or the reverse is true if readers want to understand the historical origins of a particular theoretical tradition. Since Jonathan Turner is an active theorist in his own right, he brings to the book an appreciation of how theories are created as an insider rather than as only a commentator on theory. As such, he is able to bring out the underlying assumptions, structure, and form of a theory in new and interesting ways for casual readers and scholars alike.

 This book presents extensive new research findings on and new thinking about Southeast Asia in this interesting, richly diverse, but much understudied period. It examines the wide and well-developed trading networks, explores the different kinds of regimes and the nature of power and security, considers urban growth, international relations and the beginnings of European involvement with the region, and discusses religious factors, in particular the spread and impact of Christianity. One key theme of the book is the consideration of how well-developed Southeast Asia was before the onset of European involvement, and, how, during the peak of the commercial boom in the 1500s and 1600s, many polities in Southeast Asia were not far behind Europe in terms of socio-economic progress and attainments.

 As modern foreign policy and international relations encompass more and more scientific issues, we are moving towards a new type of diplomacy, known as "Science Diplomacy". Will this new diplomacy of the 21st century prove to be more effective than past diplomacy for the big issues facing the world, such as climate change, food and water insecurity, diminishing biodiversity, pandemic disease, public health, genomics or environmental collapse, mineral exploitation, health and international scientific endeavours such as those in the space and the Antarctic? Providing a new area of academic focus that has only gathered momentum in the last few years, this book considers these questions by bringing together a distinguished team of international specialists to look at various facets of how diplomacy and science are influenced by each other. The book not only dissects the ways that politics, science and diplomacy have become intertwined, but also highlights how the world's seemingly most intractable problems can be tackled with international collaboration and diplomacy that is rooted in science, and driven by technology. It, therefore, challenges the conventional wisdom concerning the juxtaposition of science and the world of diplomacy.

 This two-volume work offers a comprehensive examination of the distressing topics of transnational crime and the implications for global security. National security is a key concern for individual nations, regions, and the global community, yet globalism has led to the perfusion of transnational crime such that it now poses a serious threat to the national security of governments around the world. Whether attention is concentrated on a particular type of transnational crime or on broader concerns of transnational crime generally, the security issues related to preventing and combatting transnational crime remain of top-priority concern for many governments. *Transnational Crime and Global Security* has

been carefully curated to provide students, scholars, professionals, and consultants of criminal justice and security studies with comprehensive information about and in-depth analysis of contemporary issues in transnational crime and global security. The first volume covers such core topics as cybercrime, human trafficking, and money laundering and also contains infrequently covered but nevertheless important topics including environmental crime, the weaponization of infectious diseases, and outlaw motorcycle gangs. The second volume is unique in its coverage of security issues related to such topics as the return of foreign terrorist fighters, using big data to reinforce security, and how to focus efforts that encourage security cooperation.

 While there is talk of the Fourth Industrial Revolution, old and new challenges bedevil the world - climate change, nutrition, and health poverty being at the top of the list. A history of the evolution of military technology among knights in Renaissance Europe from the fifteenth century to the seventeenth century. The Art of Renaissance Warfare tells the story of the knight during the fifteenth and sixteenth centuries—from the great victories of Edward III and the Black Prince to the fall of Richard III on Bosworth Field. During this period, new technology on the battlefield posed deadly challenges for the mounted warrior; but they also stimulated change, and the knight moved with the times. Having survived the longbow devastation at Crécy, Poitiers and Agincourt, he emerged triumphant, his armor lighter and more effective, and his military skills indispensable. This was the great age of the orders of chivalry and the freemasonry of arms that bound together comrades and adversaries in a tight international military caste. Men such as Bertrand du Guesclin and Sir John Chandos loom large in the pages of this book—bold leaders and brave warriors, imbued with these traditions of chivalry and knighthood. How their heroic endeavors and the knightly code of conduct could be reconciled with the indiscriminate carnage of the “chevauchee” and the depredations of the “free companies” is one of the principal themes of this informative and entertaining book.

The modern concept and study of civilization have their roots, not in western Europe, but in the spirit of scientific investigation associated with a self-conscious Islamicate civilization. What we call modernity cannot be fathomed without this historical connection. We owe every major branch of science known today to the broad tradition of systematic inquiry that belongs to a “region of being”—as Heidegger would say—whose theoretical, practical and institutional dimensions the philosophy of that civilization played an unprecedented role in creating. This book focuses primarily on the philosophical underpinnings of questions relating to civilization, personhood and identity. Contemporary society and thinking in western Europe introduced new elements to these questions that have altered how collective and personal identities are conceived and experienced. In the age of “globalization,” expressions of identity (individual, social and cultural) survive precariously outside their former boundaries, just when humanity faces perhaps its greatest challenges—environmental degradation, policy inertia, interstate bellicosity, and a growing culture of tribalism. Yet, the world has been globalized for at least a millennium, a fact dimmed by the threadbare but still widespread belief that modernity is a product of something called the West. One is thus justified in asking, as many people do today, if humanity has not lost its initiative. This is more a philosophical than an empirical question. There can be no initiative without the human agency that flows from identity and personhood—i.e., the way we, the acting subject, live and deliberate about our affairs. Given the heavy scrutiny under which the modern concept of identity has come, Dr. Shaker has dug deeper, bringing to bear a wealth of original sources from both German thought and Hikmah (Islamicate philosophy), the latter based on material previously unavailable to scholars. Posing the age-old question of identity anew in the light of these two traditions, whose special historical roles are assured, may help clear the confusion surrounding modernity and, hopefully, our place in human civilization. Proximity to Scholasticism, and therefore Islamicate philosophy, lent German thought up to Heidegger a unique ability to dialogue with other thought traditions. Two fecund elements common to Heidegger, Qūnawī and Mullā Ṣadrā are of special importance: Logos (utterance, speech) as the structural embodiment at once of the primary meaning (essential reality) of a thing and of divine manifestation; and the idea of unity-in-difference, which Ṣadrā finally formulated as the substantial movement of existence. But behind this complexity is the abiding question of who Man is, which cannot be answered by theory alone. Heidegger, who occupies a good portion of this study, questioned the modern ontology at a time of social collapse and deep spiritual crisis not unlike ours. Yet, that period also saw the greatest breakthroughs in modern physics and social science. The concluding chapters take up, more specifically, identity renewal in Western literature and Muslim “reformism.” The renewal theme reflects a point of convergence between the Eurocentric worldview, in which modernism has its secular aesthetics roots, and a current originating in Ibn Taymiyyah’s reductionist epistemology and skeptical fundamentalism. It expresses a hopeless longing for origin in a historically pristine “golden age,” an obvious deformation of philosophy’s millennial concern with the commanding, creative oneness of the Being of beings.

The world is in a second nuclear age in which regional powers play an increasingly prominent role. These states have small nuclear arsenals, often face multiple active conflicts, and sometimes have weak institutions. How do these nuclear states—and potential future ones—manage their nuclear forces and influence international conflict? Examining the reasoning and deterrence consequences of regional power nuclear strategies,

this book demonstrates that these strategies matter greatly to international stability and it provides new insights into conflict dynamics across important areas of the world such as the Middle East, East Asia, and South Asia. Vipin Narang identifies the diversity of regional power nuclear strategies and describes in detail the posture each regional power has adopted over time. Developing a theory for the sources of regional power nuclear strategies, he offers the first systematic explanation of why states choose the postures they do and under what conditions they might shift strategies. Narang then analyzes the effects of these choices on a state's ability to deter conflict. Using both quantitative and qualitative analysis, he shows that, contrary to a bedrock article of faith in the canon of nuclear deterrence, the acquisition of nuclear weapons does not produce a uniform deterrent effect against opponents. Rather, some postures deter conflict more successfully than others. Nuclear Strategy in the Modern Era considers the range of nuclear choices made by regional powers and the critical challenges they pose to modern international security.
