Classical Mechanics By Gupta We formulate classical mechanics on a general group manifold, defining the natural symplectic structure as the 2-form $\omega \simeq -\sum_i d(p_i \theta_i)$, with p being the momentum and θ the left-invariant coframe. We verify that our formulation has the desired invariance properties and satisfies Liouville's theorem, and thus satisfies the conditions required for use in the hybrid Monte Carlo algorithm. Classical mechanics on group manifolds and applications to ... The constraint equations (Gauss' law) which appear in Yang-Mills classical mechanics are studied at the classical and quantum level, with particular emphasis on their
