Their Eyes Were

Watching God Elsevier Health Sciences Golding's iconic 1954 novel, now with a new foreword by Lois Lowry, remains one of the greatest books ever written for young adults and an unforgettable classic for readers of any age. This edition includes a new Suggestions for

Further Reading by Jennifer Buehler. At the dawn of the next world war, a plane crashes on an uncharted island, stranding a group of schoolboys. At first, with no adult supervision, their freedom is something to celebrate. This far from civilization they can do anything they want. Anything. But as order collapses, as strange howls echo in the night, as terror begins its reign, the hope of adventure seems as far removed from reality as the hope of being rescued.

Oxford University Press String theory is a leading candidate for the unification of universal forces and matter, and one of its most striking predictions is the existence of small additional dimensions that have escaped detection so far. This book focuses on the geometry of these dimensions, beginning with the basics of the theory, the mathematical properties of spinors, and differential geometry. It further explores advanced techniques at the core of current research, such as G-structures and generalized complex geometry. Many significant classes of solutions to the theory's equations are studied in

detail, from special holonomy and Sasaki-Einstein manifolds to their more recent generalizations involving fluxes for form fields. Various explicit examples are discussed, of interest to graduates and researchers.

"This book is an indispensable and uniquely placed resource for any social work student daunted by the prospect of the dissertation, or indeed for practitioners who are starting out in research. Malcolm Carey has managed the difficult task of producing a guide which is not only accessible and full of practicable advice, but is also grounded in theory and strongly informed by social work values. As a social work PhD student, I would highly recommend this book to fellow students at all levels of qualification." Hannah Jobber, PhD student, University of York, UK

"Malcolm Carey has written an excellent second edition. It combines discussion of theoretical issues with practical guidance, supported with clear examples. It achieves a

rare balance of conceptual sophistication combined with the provision of down-to-earth advice. Students at undergraduate and postgraduate levels will find it answers the majority of their questions about how to do a dissertation in a very clear and accessible way."

Professor Steven M Shardlow, The University of Salford, UK and Editor-in-Chief, The Journal of Social Work "I have recommended the first edition of this book to undergraduate and postgraduate students undertaking dissertations and I will definitely be recommending this 2nd edition. It is a very clearly written and accessible guide to the process of writing a research-based dissertation from first thoughts through to final writing up. The book is well laid out with excellent summaries of key points in table form. Carey takes the student through the research process discussing the importance of the different stages in contributing to the dissertation as a whole. This new edition has been updated to take account of new areas such as the growth of systematic reviews and remains an

excellent sourcebook for students and anyone taking their first steps in undertaking research." David Saltiel, Lecturer in Social Work, School of Healthcare, University of Leeds, UK "This book conveys complex information pertaining to research in a clear and accessible way... this is a comprehensive guide which is easy to follow." Val Sylvester, Senior Lecturer, The School of Health and Social Care, Birmingham City University, UK Research is now identified as comprising an integral part of everyday practice within health and social care. The second edition of this popular book equips students and practitioners within social work with the skills and knowledge to effectively undertake research and complete their dissertation. Written in a clear and straight forward way, the book demystifies tasks which may at first seem difficult, such as the literature review or interviews with practitioners, and clarifies the research process by providing a straightforward guide to the basics. Topics include: Deciding a topic Setting a research question and clear objectives The

stages followed whilst completing a dissertation How to undertake a literature review Analysis and writing up Ethical issues This new edition has been fully updated to include more guidance on doing a literature review and literature based research, how the internet can be used to undertake research and more details of ethics and writing up. This book provides an essential guidebook to qualitative research methodology for social work students and practitioners. How have Malta and

Cyprus - both EU

members - transitioned from colonial island states to independent

democracies? With the

assistance of primary

documentation this book

traces the difficult path of

these two states to

becoming independent

liberal democracies by

using the pathway of

democratization through

decolonization. Using

socio-economic and

political data, analysed

through the microscope of

political science and

international relations

theories, Isabelle Calleja

Ragonesi charts the

progress of the two

islands in the context of a

number of four distinct

phases. Firstly

decolonization, independence and achieving the status of procedural democracies; secondly post-colonial independence consolidating democracy and regime breakdown; thirdly sovereign nation-state status and second attempts at consolidating democracy and finally attempting to reach substantive democracy status and EU membership. The study of these two states is contextualized within the context of democratization in Southern Europe and the cases of Malta and Cyprus provide new insights on the region for scholars of political science and international institutions.

A FORTRAN code (Program SCAT 4) is described which was written in order to analyze elastic scattering of various particles against complex nuclei by means of the diffuse surface optical model of the nucleus. Program SCAT 4 calculates in the center-

of-mass system the differential elastic scattering cross sections the polarization and the total reaction cross section for particles of spin 0 or 1/2 having any mass, charge and (non-relativistic) energy scattered by spinless nuclei of any mass and charge for various sets of diffuse surface optical model parameters. The incident and target particles are assumed to interact through a two-body potential consisting of a complex nuclear potential which includes spin-orbit interaction and whose shape can be specified by input parameters. When the incident particle is charged, the two body potential contains, in addition, the coulomb potential between an incident point charge and an extended, constant charge density target. The calculations include numerical integrations of the radial Schroedinger equations for the effective partial waves. (Author).
