The book looks at a broad perspective of decision making and each chapter focuses on a specific aspect related to making crucial decisions. Following an initial introduction the book explores the concept of autonomy and the many factors that influence autonomous practise. The role of knowledge in decision making, using evidence to inform decisions, as well as different approaches to decision making are also examined - including the traditional or rational approach, decision analysis and the development of professional judgement. Dilemmas arise when decisions are made and therefore ethical decision making is an important component of this book. Management decisions may be different from those related to giving specific care to women, hence one chapter focuses on making management decisions. Emphasis is also placed on the role of the midwife in helping women make their own decisions, the role of reflection in enhancing the decisions midwives make and the support midwives can receive from their Supervisor of Midwives. Flowcharts explain and facilitate the decision-making process. A very practical approach to decision-making in midwifery, with contributions from midwives who have considerable experience in this area Provides guidelines on how to achieve successful autonomous midwifery practice, enabling theory to be effectively applied to practice Includes coverage of management roles and decision-making as well as clinical scenarios, offering frameworks and flowcharts to guide the inexperienced Suggests different approaches to making difficult decisions

*Testing an Ethical Decision-making Model for Nurses* Mosby Incorporated

Patients today are more empowered and knowledgeable than they have ever been. By law, they must be told about the risks and benefits of proposed treatments and give informed consent before treatment is initiated. Through the democratization of medical information, they have access to peer-reviewed medical journals. Social media allows patients to share stories with others and to learn about other people's experiences with

various treatments. There are websites written by experts at leading medical schools to help patients understand diseases and treatments. They have the right to see their medical records. The net result of all changes is a shift in the power balance between doctors and patients. Ideally, as a result of these shifts, the patients' values and preferences should guide treatment decisions. However, this proliferation of information often leads to confusion rather than clarity. Publicly available information often includes seemingly contradictory conclusions and recommendations. Patients don't know which opinions to trust. So, although patients have more information than ever, and many want to make decisions for themselves, they need more guidance than ever to help them process an avalanche of information. This volume aims to help both medical professionals and their patients navigate the evolving healthcare landscape by analyzing the process of shared decision-making (SDM) in clinical medicine. The concept of SDM has emerged in the last two decades as a middle ground between, on the one hand, old-fashioned physician paternalism of the "doctor-knows-best" variety and, on the other hand, unfettered patient autonomy by which patients are thought capable of individually and independently choosing their own medical interventions. Advocates of SDM imagine that decisions will be made best if they follow a complex discussion and negotiation between doctor and patient; such discussions should incorporate the doctor's medical and technical expertise as well as the patient's goals, values, and preferences. SDM takes different forms for different patients in different clinical circumstances. This volume gathers experts in SDM to share their insights about how it ought to be done. The authors include clinicians, social scientist, and philosophers, all of whom have thought about or cared for patients from a variety of backgrounds and in a variety of clinical circumstances. The papers explore the complexity of SDM and offer practical guidance, gained from years of experience, about how to employ SDM as effectively as possible.

Using path-breaking discoveries of cognitive science, Mark Johnson argues that humans are fundamentally imaginative moral animals, challenging the view that morality is simply a system of universal laws dictated by reason. According to the Western moral tradition, we make ethical decisions by applying universal laws to concrete situations. But Johnson shows how research in cognitive science undermines this view and reveals that imagination has an essential role in ethical deliberation. Expanding his innovative studies of human reason in *Metaphors We Live By* and *The Body in the Mind*, Johnson provides the tools for more practical, realistic, and constructive moral reflection.

*Nursing Ethics and Professional Responsibility in Advanced Practice, Second Edition* is a comprehensive textbook focused on advanced practice nursing ethics. The text proactively addresses challenges that span specialty areas well as issues unique to these areas of practice. Advanced practice nurses (APNs) share the same professional responsibilities that other practicing nurses do, however, given their expanded scope of practice they assume a role with greater responsibility. For example, nurse anesthetists are accountable for the safe induction and recovery of their patients (this includes understanding the unique nature of individuals), and diabetic clinical nurse specialists are responsible for the education and management of their especially vulnerable population and for educating others. This text is suitable for a graduate level audience as well as those pursuing a DNP level degree. There is significant research that indicates nurses working in a hospital setting experience moral distress while caring for their patients. While there are many barriers that prevent nurses from overcoming moral distress and moving toward moral resilience, this research project focused on eliminating barriers that nurses face in making good ethical, moral, biblical decisions. The research methodology for this project was qualitative, interpretive, and longitudinal. There was an initial interview with five participant nurses at Ellis Medicine regarding their knowledge of ethics in healthcare and moral distress. The researcher then provided an education program for participant nurses to increase their knowledge of ethics in healthcare and moral distress and provide tools to help them overcome barriers in taking action to make good ethical, moral, biblical decisions, which will help build moral resilience. The nurses took a survey following the education program to measure the impact of the intervention. The results of the study support the hypothesis that nurses face barriers in making good ethical, moral, biblical decisions in their practice, and education can help alleviate barriers along with helping to build moral resilience.
