C is a high-level programming language intended for system programming. Embedded C is an extension that provides support for developing efficient programs for embedded devices. Yet, it is not a part of the C language. In this "Embedded C programming" article, we shall discuss the following topics. What is Embedded C Programming Embedded C

Programming | Basic Structure of Embedded C ...Embedded C Programming is the soul of the processor functioning inside each and every embedded system we come across in our daily life, such as mobile phone, washing machine, and digital camera.. Each processor is associated with an embedded software. The first and foremost thing is the embedded software that decides functioning of the embedded system.

Basics and Structure of Embedded C Program with Examples ...Embedded C is fully hardware dependent language. C language program is hardware independent. Embedded C program is hardware dependent. For C language, the standard compilers can be used to compile and execute the program. For Embedded C, you need to some specific compilers that are able to generate particular hardware/micro-controller based output.
