This book is based on the work of the YEEES Research Centre, an international network of scientists from partner universities in Germany, Mozambique, Namibia and South Africa. It presents inter- and transdisciplinary research that explores different ways of understanding resilience, an essential characteristic for systems, organizations and people – providing them with strength in the face of attacks and challenges, and both enabling and

fostering constant adaptation and improvement. Building resilience to face today's ever-changing societal and environmental realities requires unbiased research activities that transcend the borders of countries and academic disciplines alike. The research addressed in this book, thus, is multidisciplinary and includes contributions to areas such as sustainable agriculture, entrepreneurial ecosystems, and smart communities, as well as groundbreaking work on skills development and ICT education. Highlighting the variety of research activities and their outcomes, this book offers a valuable resource for researchers and practitioners in the fields of sustainable resilience development.

This new edition provides an up-to-date coverage of important theoretical models in the scheduling literature as well as significant scheduling problems that occur in the real world. It again includes supplementary material in the form of slide-shows from industry and movies that show implementations of scheduling systems. The main structure of the book as per previous edition consists of three parts. The first part focuses on deterministic scheduling and the related combinatorial problems. The second part covers probabilistic scheduling models; in this part it is assumed that processing times and other problem data are random and not known in advance. The third part deals with scheduling in practice; it covers heuristics that are popular with

practitioners and discusses system design and implementation issues. All three parts of this new edition have been revamped and streamlined. The references have been made completely up-to-date. Theoreticians and practitioners alike will find this book of interest. Graduate students in operations management, operations research, industrial engineering, and computer science will find the book an accessible and invaluable resource. Scheduling - Theory, Algorithms, and Systems will serve as an essential reference for professionals working on scheduling problems in manufacturing, services, and other environments.

Fred Reichheld's 2006 book *The Ultimate Question*, that question being, "How likely is it that you would recommend this company to a friend or colleague?"-challenged the conventional wisdom of customer satisfaction programs. It coined the terms 'bad profits' and 'good profits' and pointed to a faster, much more accurate way of gauging customers' real loyalty to a company, introducing a quantitative measure (the Net Promoter Score) for establishing a baseline and effectively tracking changes going forward.

Richard Owen and Laura Brooks are co-developers, along with Reichheld, of the methodology behind answering the question. In this book, Owen and Brooks tell how based on a variety of real case studies' to actually embed Net Promoter discipline in organizations of all types.

Enterprise Systems have been used for many years to integrate technology with the management of an organization but rapid

technological disruptions are now creating new challenges and opportunities that require urgent consideration. This book reappraises the implementation and management of Enterprise Systems in the digital age and investigates the vital link between business processes, information technology and the Internet for an organization's competitive advantage and success. This book primarily focuses on the implementation, operation, management and integration of Enterprise Systems with fastemerging disruptive technologies such as blockchains, big data, cryptocurrencies, artificial intelligence, cloud computing, data mining and data analytics. These disruptive technologies are now becoming mainstream and the book proposes several innovations that organizations need to adopt to remain competitive within this rapidly changing landscape. In addition, it examines Enterprise Systems, their components, architecture, and applications and enlightens readers on the benefits and shortcomings of implementing them. This book contains primary research on organizations, case studies, and benchmarks ERP implementation against international best practice.

Information Technology for Management Edward Elgar Publishing
In the past, vertical integration was a way to gain efficiency in supply chains. Today, vertical integration doesn't work as well because specialty organizations have developed to perform specific tasks very efficiently. Efficiency through supply chains is achieved today by linking specialists throughout the vertical business hierarchy. This sort of linkage is possible because of the technology that has developed which facilitates it, making today supply chains both faster and more cost effective. Supply Chain Information Technology surveys the different systems that are

used by businesses to achieve these efficiencies. The target market for this book is practitioners in the supply chain management field, one of the fastest growing fields in our economy. The rapid growth in computer technology provides supply chains with valuable tools to better coordinate and control their operations. This book describes how these systems provide supply chains with information system support. The design of these systems and the tasks they perform are demonstrated with the help of analytic techniques and models that are used in the book.

This book constitutes the proceedings of the 4th EuroSymposium on Systems Analysis and Design, SIGSAND/PLAIS 2011, held in Gdańsk, Poland, in September 2011. The objective of this symposium is to promote and develop high-quality research on

all issues related to systems analysis and design (SAND). It provides a forum for SAND researchers and practitioners in Europe and beyond to interact, collaborate, and develop their field. The 9 papers were carefully reviewed and selected from 20 submissions. An additional revision took place after the conference to incorporate discussion results from the presentation. The contributions are organized into topical sections on business process modeling, integrated systems development, and software development.
