This comprehensive addition to the debate on sustainable development has been produced in order to take a global pulse on how the financial services sector is responding to the growing challenge of shareholder and stakeholder expectations on social and environmental performance. In the opinion of many commentators in this new book, given the intermediary role banks play within economies, their potential contribution toward sustainable development is enormous. Indeed, for banks, the conclusion that corporate sustainability has become an investable concept that increases long-term shareholder value is becoming difficult to deny. To date, banks have been relatively slow to examine their exposure to risk (the environmental and social performance of their clients) and the business opportunities of sustainable development (the products and services they offer). Not before time, Sustainable Banking concludes that this is beginning to change, with both risk and opportunity becoming established elements in banking policies towards environmental sustainability. In addition, banks have now begun to take notice of and address their own environmental performance. Through the use of case studies and detailed analysis, the book examines the environmental policies of banks, the importance of transparency and communication with their stakeholders, environmental and ethical investment funds, current practice by the providers of financial services with regard to environmental risk management and, finally, the key role of government, NGOs and multilateral banks in delivering sustainability. Sustainable banking has not, however, been achieved and nor will it be in the immediate future. As globalisation proceeds apace, Sustainable Banking argues that improvements are necessary in banks' attitudes toward transparency and accountability with regard to their lending policies. In addition, in order to promote best practice, the leading banks need to start measuring their customers' environmental performance in order to persuade polluting clients that minimum compliance to regulations will no longer suffice. The book finds many shining examples in the co-operative, mutual and social sectors for the big players to emulate. Environmental and ethical considerations in such loan portfolios have proven to be profitable and "best-in-class" larger banks are now also reaping benefits. The unprecedented scope of the book has attracted contributors from four continents including Deloitte & Touche, Rabobank, The World Bank, The European Bank for Reconstruction and Development, The United Nations Environment Programme, The World Business Council for Sustainable Development, UBS, Henderson Investors, KPMG, The World Resources Institute and SAM Sustainability.

The book is the outcome of the authors' long experience of teaching business law and company law to students pursuing undergraduate and postgraduate courses at the University of Delhi. This, in fact, has made it possible for them to write on law without the use of legal jargon; thus ensuring that even the most complicated provisions of various legislations are explained in an easily comprehensible manner. This new edition of the book has been thoroughly updated and revised in accordance with the Companies Act, 2013. The amendments introduced by the Insolvency and Bankruptcy Code, 2016, through its Eleventh Schedule to the Companies Act, 2013 have also been duly incorporated.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/globalfindex](http://www.worldbank.org/globalfindex).

This new edition of a core undergraduate textbook for construction managers reflects current best practice, topical industry preoccupations and latest developments in courses and fundamental subjects for students. While the construction process still requires traditional skills, changes over recent decades today demand improved understanding of modern business, production and contractual practices. The authors have responded accordingly and the book has undergone a thorough re-write,

eliminating some of the older material and adding new processes now considered essential to achieving lean construction. Particular emphasis is given, for example, to supply chains and networks, value and risk management, BIM, ICT, project arrangements, corporate social responsibility, training, health and welfare and environmental sustainability. Modern Construction Management presents construction as a socially responsible, innovative, carbon-reducing, manager-involved, people-oriented, crisis-free industry that is efficient and cost effective. The overall themes for the Seventh Edition are: Drivers for efficiency: lean construction underpinning production management and off-site production methods. Sustainability: reflecting the transition to a low carbon economy. Corporate Social Responsibility: embracing health & safety, modernistic contracts, effective procurement, and employment issues. Building Information Management: directed towards the improvement of construction management systems. The comprehensive selection of worked examples, based on real and practical situations in construction management and methods will help to consolidate learning. A companion website at

<http://www.wiley.com/go/MCM7> offers invaluable support material for both tutors and students: Solutions to the self-learning exercises PowerPoint slides with discussion topics Journal and web references Structured to reflect site, business and corporate responsibilities of managers in construction, the book continues to provide strong coverage of the salient elements required for developing and equipping the modern construction manager with the competencies and skills for both technical and business related areas.

Research Paper (undergraduate) from the year 2018 in the subject Business economics - Supply, Production, Logistics, grade: 3.96, , course: Project Management, language: English, abstract:

The broad objective of the study was to analyse the effect of project planning processes on performance of IT projects in CBE. Furthermore, this study will examine the impact of effective planning processes on quality of IT projects in CBE, analyse the impact of effective planning processes on IT project completion time in CBE and to investigate the impact of effective planning processes on IT project completion cost in CBE. In addition, this study aimed to fill the gap by answering the following research questions: What is the role of planning processes on quality of IT projects in CBE? What is the role of planning processes on IT project completion time in CBE? What is the role of effective planning processes on IT project completion cost in CBE? Projects play a major role in the economic development of a country. They are the building blocks for generating additional capital and for ensuring a flow of goods and services. The objective of the project management is to realize the planned project objectives and its project management has different phases and processes within it. Each phase contains rigorous and comprehensive activities to be performed. The success of any project is measured by its completion time, within the budget cost and meets the planned performance based on the initial plan. Therefore, planning has an important role on the project success. To accomplish all these projects successfully, each of them must undergo different phases where the level of efforts and impacts to the project success depends on the phases. Previous research has indicated inadequate project planning and analysis is one of the reasons for project failure. Moreover, research discovered that there is positive correlation between project planning effort and project success. According to their study findings there is a high correlation between the planning efforts and overall project success. Although their studies have considered many factors that influence project outcomes, but planning was mentioned as an important factor for project success.

Doctoral Thesis / Dissertation from the year 2005 in the subject Law - Comparative Legal Systems, Comparative Law, grade: 70/100, Stellenbosch University, course: LL M International Trade Law, 61 entries in the bibliography, language: English, abstract: This paper focuses upon legal issues arising in the field of electronic or Internet banking. The overview of previous developments in this field and of types of e-banks will be given. It analyses existing and potential problems mainly connected with cross-border services. The issue of data protection, the right to provide services and the advertisement of e-banking services will be especially examined. The paper will evaluate current regulation and it will be shown, that there are either lacunae in such legislation, in the alternative, several important issues are left unanswered, possibly severely hindering the further progress of Internet banking. This dissertation suggests that further developing of both international and domestic legislation is crucial for banks to be able to make use of the possibilities offered by the Internet.
