Femtosecond Physics:

Atoms and Molecules in Strong Laser Fields fills an important need for a thorough introduction of the theory behind the high-field laser physics phenomena on which this emerging research field is based. Author Frank Grossmann is a theoretical physicist who specializes in quantum optics. Theoretical Femtosecond Physics: Atoms and Molecules in ... Theoretical investigations of atoms and molecules interacting with pulsed or continuous wave lasers up to atomic field strengths on the order of  $10^{16}$  W/cm<sup>2</sup> are leading to an understanding of many challenging experimental discoveries. This book deals with the basics of femtosecond physics and goes up to the latest applications of new phenomena. Theoretical Femtosecond Physics | SpringerLink This textbook extends from the basics of femtosecond physics all the way to some of the latest developments in the field. In this updated edition, the chapter on laser-driven atoms is augmented by the discussion of two-electron atoms interacting with strong and short laser pulses, as well as by a review of ATI rings and

low energy structures in photo-electron spectra. Theoretical Femtosecond Physics | SpringerLink Theoretical Femtosecond Physics: Atoms and Molecules in Strong Laser Fields (Graduate Texts in Physics) - Kindle edition by Grossmann, Frank. Download it once and read it on your Kindle device, PC, phones or tablets. Use features like bookmarks, note taking and highlighting while reading Theoretical Femtosecond Physics: Atoms and Molecules in Strong Laser Fields (Graduate Texts in Physics).
